Hi. Being a former Atari enthusiast as a 'still' dedicated Atari game fan, I was really happy to hear that there are Atari emulators available for the PC. All those old classics that I like (Mule, especially) can now be played on my PC through this emulator...

However, I don't know where to get the OS ROM. Has anyone here using an Atari emulator found where to get the ROM image? Are there even vendors that sell just this image?

If I get the registered version of XL-It (vs Shareware), does it come with the needed image?

Thanks, Kevin (wellsk@netcom.com)

Why would you need SpartaDOS?Any DOS should work with that drive.
It's not what DOS you use but which SIO handler you use.

: Rainbow95?

If you're playing a boot disk game,then there's no such thing as D1: and D2:.
The game just accesses the drives directly through the SIO
handler.Hence switching the default drive is meaningless.
Conan probably wants you to put the other "atr" in drive 1.

: > -Scott

: Scott,

: In XL-It 0.15 you can enter into monitor mode by pressing F7. One of
: the commands you can enter is <d> <disk image>, where <d> is the drive
: number. So, if you were to type: 1 conan2.atr, it should "switch"
: disks. You can find this command documented in either of the xlit015
: manual files that are included in the zip file. Even though you can
: enter multiple .atr files on the command line(representing drives 1-4),
: I have not found any way to access all of the drives. If anyone else
: has any further information, I would be interested.

: PC X-former 3.0, which costs $29.95 US, can also dynamically switch
: disks. The freeware version, 2.5, does not have this feature, and only
: seems to be able to play single disk games. This is too bad, as it is
: significantly faster than XL-It.

uh,Conan is a single disk game.

This is why I wanted a BlackBox instead of a MIO.So you could play
two-sided disks.
Look into a APE cable.

: Hope this helps.

: - John

They are included in a file called "xf25.zip" this is Xformer 2.5.
You can get it from my page if you can't find it anywhere else:

http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html"

> If I get the registered version of XL-It (vs Shareware), does
> it come with the needed image?

There is no registered version of Xl-it! because it's freeware.
I can't include the ROMs because they are still copyrighted by
Atari.

Bye,

Markus

Why would you need SpartaDOS?Any DOS should work with that drive.
It's not what DOS you use but which SIO handler you use.

Well I was grasping at straws trying to figure out why Atari DOS
wouldn't recognize my second drive - since Sparta DOS came with the
U.S. Doublers I was thinking that might have something to do with it.
Since then I have founf out it was probably a loose connection as I
took the drive apart and cleaned it and made sure everything was
connected tight -- now it works just fine.

Ummm, I had an original 400, and it did indeed support "Graphics 7.5".
The higher res modes that used the GTIA were missing, but not that mode.

I've been playing with Rainbow a bit and I have a questions that I should not have to ask. I put SpartaDos in drive 1 and boot. Switch disks to another with an EXE on it. Try to do a DIR, boom.

I assume this is because Sparta is no longer inserted. OK, how does one make a "disk" with Sparta and the EXE on it, all from the Mac?

Was this TURBO BASIC by any chance?

It was about 5 times faster than normal Basic, and there was a Turbo Basic
Compiler that made it 15 times faster than normal Basic. As well as speed,
it had a lot more functions, including DOS commands, so you could actually
do a disk directory without having to go to DOS.

I believe that the authour (Frank Ostowoski(SP?)) went on to write GfA Basic
on the Atari ST.

I could upload my copy of Turbo Basic if it isn't on any of the archives.

AE.

>was written originally for the CTIA, although they must have known there
>were to be more modes later, else why allow entry of modes in the range
>9-15?

It was the Antic chip that supported the graphics modes from the point of view
of how memory was mapped to the screen, and not the GTIA. The Antic has
remained the same throughout the history of the Atari 400/800/1200/XL/XE
platform. Modes 0-8 and 12-15 and the variation of mode 0 with 10 line
characters (sometimes known as GRAPHICS 0.5) are known by a different set of
numbers by the ANTIC chip.
In the 400 and 800, if you typed in something like "GRAPHICS 14" from BASIC,
you would get an error message (ERROR 145 if I remember). These extra modes
(12-15 & graphics 0.5) could be made available on all 8-bit Ataris (even ones
with a CTIA chip) by making a custom display list. Modes 12-15 were made
available to the S: handler in the XLs and XEs. For some reason, mode 0.5 never
was (I remember that a word processing program that ppeared in Compute used
that mode).

As for modes 9-11, they were only made available when the GTIA replaced the
CTIA (about 1 year after the launch of the first 400s and 800s and later
400s and 800s were made with a GTIA). The function of the GTIA chip is to
convert the output of the Antic chip into what will be displayed in the
monitor and add players and missiles. From the point of view of the Antic
chip, Modes 8, 9, 10, and 11 are exactly the same. What happens is that there
is a register who'se top 2 bits select which GTIA mode to use. By setting
these 2 bits, the GTIA performs some magic on what was originally mode 8, and
merges groups of 4 bits to form a single pixel (does anyone know what the
4th bit was used for in mode 10). It is because modes 9, 10, and 11 are created
by the GTIA and not the Antic that they do not have a text window when called
from Basic. I once wrote a program using 5 lines of Basic that set up a DLI
that changed this register when the display list drew the text window. The
program even went as far as to make it look and work exactly like a GTIA
mode with a textwindow (the values of your COLOR, PLOT, and DRAWTO statements
corresponded perfectly to the pixels on screen). This was the only 8-bit
program I ever wrote that has been published in a magazine (Atari User).
I could upload the program if anyone's interested.

Besides mode 8, you can set this register in other graphics modes. Mode 0 suddenly becomes very psychedelic when you set the GTIA chip to mode 11.

As well as the regular modes, there seemed to be custom modes created by hackers (although these relied heavily on DLIs). One of them was a mixture of modes 9 and 11 that allowed you to display 256 colours in 80*96 with 1 black line seperating the each of the rows. I think that this might have been done by alternating between modes 9 and 11 on each scanline, and somehow, mixing the two scanlines's together. The chrominance (mode 11) and the luminance (mode 9) components mixed to form a 256 colour graphics mode (at least that's my theory on how it worked).

That's the one. I have a friend Oliver who wrote a number of amazing utilities for BASIC, and a few games. He discovered TURBO BASIC after I had traded up to a 520ST so I never got a chance to really use it.

Still the speed was amazing. One of his games he ran under it and it was uch faster. When he compiled it you couldn't play it any more.

> It was about 5 times faster than normal Basic, and there was a Turbo Basic

DCM is a Atari format for converting an 8-bit disk to a file. It had limited
compression using a form of Run-Length Encoding, and ignoring empty sectors.

XFD is a raw image of an 8-bit disk, first used by the ST Xformer emulator.

ATR is also an image of an 8-bit disk. I'm not sure how these differ from
XFDs, if at all. Most emulators support both XFDs and ATRs.

I have a document explaining the DCM format. It seems to have inaccuracies
in the RLE part. I tried using it to write a DCM > XFD convertor. A friend
of mine also tried using it to write a similar program, independant of
myself, and he ran into the same problem I did.

If you are still interested in the DCM document, I can send it to you.

Ok, a simple question if I may?

There's ATR's, then there's the EXE's. Then there's a folder with a bunch of ZIP's that state the ZIP's map onto a series of folders called EXExxx, which I can't find. What are the ZIPs? How up to date are they?

I know it has a 16byte header on the file, but the contents of those
16bytes I don't know.

Hello !!
The ATR and XFD are raw disk formats, i.e. the first 128 bytes of the
file are the sector 1 or the atari disk, and so on.
The ATR files has a 16 byte header, cut it and you have an XFD image.

The DCM files are RLE compressed, there is an article on this,
i'll find it and send you.

> ...
> Up The IRONS !!!
hola compadre...
Te cuento lo que yo personalmente hago.. quiza existan mejores
metodos .
Primero uso el image.. o algo asi(atarimage) que es un
programa
de PC que lee el formato atr, parece que el xfd tambien.,
este programa e permite sacar los archivos de este imagen de
disco y quedan grabados
normalmente en tu PC...
Despues yo uso el util.exe , otro programa para PC
que copia archivos desde la unidad c: o a: a la uniad
b: (generalmente la unidad de disos de 5.25" es b:) con
formato Atari..
Recomendaciones. :
Ocupa el util.exe que esta en umich (o en algun mirror
ie:
ftp.wustl.edu/systems/atari/umich.edu/8bit)
esta en el directorio Diskutils, creo y se llama
util.arc

2do.: Combiene formatear el disco en una diskettera
Atari
pese a que el programa util te ermite formatear.
El formato es un formato raro de l xf551
como yo no me he dado la paja de bajar todos los
deoeses
lo que hice fue formatear con el util., despues como
generalmente
queda con sectores malos , copie el disco(vacio) con un
copiador de sectores
(el us sector copier) que me copia obviamente tambien

elformato.y f
y finalmente siempre lo que hago es copiar ese disco
vacio una y otra vez
cada vez que necesito

algo pal atari.
3ro. el el util.exe tienes que ejecutar:
util /W /B b: filename.ext, siempre que tengas el util
en el msmo
directorio de lo que quieres copiar.

Eso seria... cualquier cosa mandame email a

waldo@main.phys.uconn.edu
asi quizs pudriamos intercambiar alguna cosita..

To use Sio2pc and a real dis drive at the same time, you will have to set the real drive as drive 2 by moving the black drive select switch to the right while the white one is to the left. Then you should be able to boot Atari DOS on the SIO2PC, format a disk in drive 2, and copy from D1 to D2.

From: DougF@gnn.com
Message-ID: <4vtjfs$3i@news-e2c.gnn.com>
Source record: 80958

I have found that if I boot up my Atari with a Sparta DOS image file (or Atari DOS image file) as drive 1 (using APE), and my real 1050 drive as D2, then my 1050 cannot read a real SpartaDOS disk written with US Doubler skew mode. In order for the 1050 to read and write in US Doubler mode, I have to actually boot my Atari with the 1050 as drive 1, using a real SpartaDOS diskette.

Does this sound right??? I think that the US Doubler 1050 stores some information about disk access when it is booted with SpartaDOS. The drive does not get this information when the computer is booted from another drive (ie APE image)

Any comments ????

Happy Computing, from Doug Feldman in Ann Arbor, MI

Message-ID: <3221acec@pianosa.demon.co.uk>
Source record: 80962

Whilst reading the usual rubbish I find here, ellman@xs4all.nl wrote something
interesting to All about Program to read/write A8 disks on pc:

Hello ellman@xs4all.nl,

exn> The PC's diskdrive is double sided, which means that both sides of a
exn> Flippy can be read without flipping the disk (is this actually

Not true. The back of a flippy *cannot* be read by head two of a DS drive. All
the info appears backwards, so isn't understood correctly. Oh, alright then,
it /can/ be read. Just not sensibly. :-)

exn> plastic covering the disk so that the timing hole could be read if the
exn> disk was flipped. This person used a special device for making an extra

Because the drive used the timing hole for alignment.

exn> hole for the timing hole to be read as well as a device for making
exn> notches. My 1050 had no problem with reading flippies without this
exn> extra hole, however, I have heard that the XF551 does have a problem

Because, until the XF551 arrived, the indexing was simply ignored by the Atari
drives.

exn> like this (or maybe it's just that despite the XF551 being a double
exn> sided diskdrive, you still have to flip your flippies).

Only if you're using a DOS that doesn't understand DS disks. Atari DOS 2.5,
for example. Using DOS XE or SpartaDOS, you can format floppies double sided
using a 551.

No. The disk would be spinning in the wrong direction to red data rom Side 2. In order to read the back of the flippy, you still hve to flip it. And now I recall how I did it with the XF551 - I had to punch the extra index hole in the cover. It was a PITA, but after I no longer had a 1050, it was worthwhile.

Actually, in the Umich archive, there is an unzip program. I
haven't tried it yet, but would suspect that it could do simple zip
extraction.
Does anyone know it it works on 2.04G zip files? How about included
directories (for those using SpartaDOS or MyDOS? I suspect, that it
won't, just files.

1652. Repairing XE-SYSTEM?

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-27 00:00:00 UTC
From: walgen@udo.informatik.uni-dortmund.de
Message-ID: <4vupsa$ht@fbi-news.Informatik.Uni-Dortmund.DE>
Source record: 80870

Hi,

I bought an old Atari XE-GAME-SYSTEM a few days ago. It seems to be broken -
the power-light goes on but the screen is black with some vertical stripes.

Does anyone know what is broken? Is there a Atari XL-Hardware FAQ?

(A bunch of talk about Atari BASIC, on 400/800, not supporting
GRAPHICS 9 and up.)
Ok, thru all the info I think the A and B OS for the 400/800
is the reason BASIC GRAPHICS 12 won't work, just does a
GRAPHICS 8 screen. I have a 800, I also have A and B ROM
cards for them (I have two 800s). I have BASIC A, B and C.
I could try 10 GRAPHICS 12 and compare on 800 and the
2 OSes and 3 BASICs along with seeing what happens on
a 800xl, 1200xl, 130xe. But I ain't. I think it was
like C. Clevinger said, the 400/800 OS A and B don't
S: handler doesn't support the GTIA modes. Even tho
somebody said the CTIA will do the modes if you write
your own Display List. I wrote a program to make BASIC
lines to make any custom Display List you want to
fit on a screen. It works sorta like 'DLI maker'
that was in ANALOG, making program lines for a DL
instead of a DLI. ('DLI maker had a bug in it that
made it not work right, I fixed this and it is really
quite a neat program.
ANYBODY KNOW WHO WROTE THE A8 OSes? I guess, the
FAQ has the original development team, I'll check
there, but if anybody knows, feel free to e-mail me.

1655. Cracking.

1660. Internet & General Terminal Emulation Software ???

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-27 00:00:00 UTC
From: Elvis Smurf <esmurf@ibm.net>
Message-ID: <322338BA.6710@ibm.net>
Source record: 80878

With the advent of APE, and some of the wonderful emulators out there
that let one take advantage of increased memory, storage, and modems,
i'd love to find some Internet tools (i.e. PPP or SLIP protocol layers,
tcp/ip stacks, tcp/ip tools like telnet, a web browser, etc). Do such
animals exist? Perhaps out of eastern europe?

secondly, and i guess i would settle for this: a good terminal
emulator? *maybe* something with 80 col? btw, what do i need, besides
an 800xl, to do 80 col?

thanks for your comments, es-

>
>---

I guess some people used unpak on superarced files and had some
trouble, not realizing the incompatabilities. Pkarc and arce40g seem
to be 100% compatable with superarc/unarc. To arc files on the intel
so that they are compatable with the 8bit you use "pkarc oct -a dest
source". Arce40g is a compact unarcer written by Buerg, and has
worked on all of the superarced files I've ever thrown at it.

So, what's up with Oasis these days? I hear you've completely
rewritten the message base software? Plus you're in the QWK NET that
sends and receives packets through internet email? Wow, free bbs
networking, that's pretty good, no more long distance calls for
exchanging network packets. Plus, individuals who do not own a bbs
can participate. All they need is a qwk offline reader. They can
send and receive qwk packets originating from all over the world
through their internet email account. I use the cmpqwk offline reader
on my intel, and my own qwk reader on the a8. The best thing about
qwk is that it is generic, you can net with any other bbs that
supports the qwk format, even intel boards. What you need is a few
more Oasis bbses to join the qwk net. So, if anyone knows of any
Oasis sysops who might like to do some FREE NETWORKING via internet
email, please contact John Haines. (Unabashed plug :)).

1668. FS/T: Atari 8-bit computer items [08/27/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-27 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4vvv0i$l6u@dfw-ixnews4.ix.netcom.com>
Source record: 80886

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 08/26/96

NOTE: There are currently 955 ORIGINAL game screen shots available on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories for sale or trade.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be given priority (especially if the trade offer overwhelms me). I collect for over 40 different systems, so please feel free to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted.

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 5.50 Atariwriter
$ 4.50 Basic -- for the 400 and 800
$ 5.50 Basketball
$ 9.50 Delta Drawing (Spinnaker)
$ 7.00 Deluxe Invaders (Roklan)
$ 9.50 Jumbo Jet Pilot (Thorn EMI)
$ 9.50 Kids on Keys (Spinnaker)
$ 4.50 Pac-Man
$ 9.50 River Raid (Activision)
$ 4.50 Star Raiders

Cartridges with case and manual:
$14.50 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers -- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers (14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3 (100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog (32 pages).
$ 9.00 Inside Atari BASIC [Atari / Reston] (183 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$42.00

*****

LOT #2

ATARI 1050 (127K) DISK DRIVE, with original power supply, and one (1) Molex connector cable.

$39.00

*****

LOT #3

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex connector cable.

$32.00

*****

LOT #4

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex connector cable.

This item has not been tested.

$ 7.00

*****

LOT #5

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$19.00

*****

LOT #6

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$23.00

*****

To reserve an item listed here, please contact me.

Please include a list of the items that you are interested in,
and your full postal mailing address. Thank you!

would love to find more in depth information on the various protection schemes used on atari 8 bit platform. i remember someone posting a couple of articles to the ng, but doubt they were archived (good stuff as i recall). something more detailed than the cracker column at yogis.

what the heck are fuzzy, shadow, random, etc. sectors, anyway? what is the basic disk format. how does one use ominmon and disk trackers in a practicle turtorial format.

english, oder deutsch.

thanks, es-

1670. 800 XL hardware mods?

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-27 00:00:00 UTC

Under Sparta 2.3 or 3.2, use BASIC ON
followed by CAR.

With SDX, just type BASIC.

anyone remember this game? it was like defender in the scrolling fighter genre and you could fly in the air or in the water. in the water were submarines and the airbound traffic would bomb you. various mines, interceptors, bombers and the like would await you inthe air. the bombers would drop items that you could catch or shoot. the sun would rise and set and then the moon would come out and you'd be flyin in the dark. there was a way to go into warpspeed by flying along the top of the screen - youd be dead if you tried to enter the water going too fast.

the copy i had was peculiar in that first you had to load it from dos, then it appeared to crash on loading, then you'd hit reset and a screenful of 6502 assembly listed out and then it would start running the game.

Since Atari BASIC is built in, I'd suggest locating the book "Your
Atari Computer, a guide to the 400/800" By, Lon Poole. The XL/XE
version. It's dark blue with a yellow bitmapped picture of a flying
saucer. This is probably one of the best books for the Atari 8-bit for
learning Atari BASIC. It has loads of great stuff in it. The Compute
books 1, 2, and 3 for programming are good additions and the most
important for all 8-bit programmers is "Mapping the Atari". Don't use
you classic computer without it! Heh...

1680. Internet & General Terminal Emulation Software ???

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-28 00:00:00 UTC
From: UASZ40A@prodigy.com
Message-ID: <501olb$vna@usenetp1.news.prodigy.com>
Source record: 80893

The XEP80 is an 80 column box that connects to a joystick port and provides 80 columns to a composite monochrome monitor. The XEP80 can be bought at B&C Computervisions at 408-986-9960. They sell composite mono monitors too, but the shipping might be high on something like that. They sell versions of terminal software too that work with this.

No, he's right. A DS disk does not have to be flipped because the drive
has heads for the top and bottom. I think he typed "floppy" and it came
out "flippy".

> exn> plastic covering the disk so that the timing hole could be read if the

Actually the hole hasn't been used since the Apple II came out,
everything uses soft sectoring now, it's faster anyway.

> drives.

So the XF551 used it? Why?

```
The Atari 8-bit Hardware Upgrade,
Modification and Add-On FAQ
==================================

| | |
| | |
/ | \

Version 0.2

Dated August 28, 1996

Maintained by: David A. Paterson
Mailto: davepat@total.net

INTRODUCTION

This is a very basic version. I intend to add as people give
feedback to what they want to see, and how they want to see it. Any
info you have is more than welcome!

PURPOSE

This FAQ exists to describe the various hardware
modifications available to the Atari 8-bit user. It does not teach
you how to do them. It definitely doesn't take any responsibility
for the results if you do try them. But it will try to give you
some information about where to find more information, which
upgrades (or "hacks") are best, and who to consult if things go
wrong. For addresses and phone numbers of any of the companies
listed, consult the Vendors and Developers List, posted at or about
the 15th of each month.

It also exists to describe the many wild and wonderful
products that have been produced for the Atari 8-bit. Many are
unique, some may be apocryphal. Mainstream items like printers,
modems, disk drives and cassette decks are all excluded, unless I
feel otherwise. Temperature gauges, combination printer
buffer/RAMdisks that run through the joystick port, and other such
are fair game.

POSTING FREQUENCY

This FAQ is posted whenever I remember to post it. It is
posted to comp.sys.atari.8bit.

OTHER STUFF I THOUGHT I SHOULD INCLUDE SOMEWHERE
```

This FAQ owes a debt of gratitude to Michael Current, Bill Kendrick, Glenn Saunders and Ben Corr for their contributions. All errors, omissions, blatant mistakes and attitude problems are mine.

ANT - Antic Magazine
AIM - Atari Interface Magazine

PART I - RAM Upgrades

General

The 6502 microprocessor at the heart of every Atari 8-bit has a sixteen bit wide address bus. What this means is that it can access up to 2^16 memory locations. That's 65536 bytes. Some people, wanting more memory, came up with a variety of techniques to use more memory. Most were built around the idea of bank switching. Bank switching means that you swap chunks of memory around so that the CPU can see them when necessary. Most schemes use 16k banks, though 4k and 32k have also been tried.

Atari 400

The original Atari 400 had either 8k or 16k. Atari produced a board with 48k. Mosaic produced a 32k board, as well as a 64k board with 48k RAM plus 4 4k RAM banks. (ANL 13, IFC)

Atari 800

The Atari 800 came with three memory slots. Each slot could contain Atari 8k or 16k RAM boards. Mosaic produced 32k and 64k

boards. Three 64k boards could be combined for 192k.

Axlon produced the 128k RAMdisk board. It banks 16k, using $CFFF as a control register. Banked memory appears from $4000 to $7FFF.

David Byrd created the "800 PLUS 288K UPGRADE" which rewired existing 16k RAM boards, but required additional work to become fully Axlon compatible. A nasty sort of flame war erupted between David Byrd and Jay Torres of the Windhover Project over who invented the upgrade.

Magna systems produced 256k, 512k and 1M boards which followed the Axlon standard. (ANL 65, 68)

Atari 1200xl

See 800xl.

Atari 600xl

As shipped, the Atari 600xl came with 16k RAM. Atari released the 1064 memory module which expanded the 600xl to 64k. MPP, now Supra, produced the Microram 64k Memory Board (ANL 19, 28)

RC Systems produced three expansion modules for the 600xl, raising memory to 32k, 48k or 64k (ANL 26, 12)

Richard Gore produced the Yorky, a 256k board which plugs in to the PBI. It provides full compatibility with 130xe type banking. It is for use on 600xls upgraded internally to 64k, or on 800xls. (AC 3/2, 10)

Atari 800xl

The Atari 800xl came with 64k RAM internal. To access RAM hidden under the OS ROMs, the PIA chip was used (PORTB, used for STICK(2) and (3) on the original 800). Claus Bucholtz published plans for a 256k upgrade which banked 32k at a time using PORTB for control in Byte magazine. (Byte Sept 85)

ICD released the RAMBO upgrade, providing 256k in 16k banks, using PORTB. Newell came out with the 256k XL, which would work on a 1200xl or 800xl, providing 256k total memory, . The two upgrades used different sequences to access their banks. (ANL 44, 115)

Charles Bucholtz updated his upgrade to use 16k banks after the release of the 130xe. Most of the 800xl upgrades can be made compatible with Antic banking. The only possible problem would be when Antic and the CPU are supposed to be using different memory banks.

The Yorky will also provide 256k on an 800xl (see the entry under 600xl).

Other PD upgrades give plans for adding a second row of 256k RAM chips, raising the 800xl to 512k.

Newell released 1Meg and 4Meg upgrades for the 800xl. These banked 16k as well, and required disabling internal BASIC to properly access the memory.

Klaus Peters also released 1Meg and 4Meg upgrades for the 800xl.

Fine Tooned Engineering, having bought the rights to ICD and Newell's products, is bringing out a third method in the Mars 8. Though not yet released, it will use SIMMs for 256k, 1Meg or 4Meg RAM.

The 800xl is arguably the most popular Atari 8-bit for upgrades, since most 800xls have socketed chips.

Atari 130xe

The 130xe was the first "official" method of banking memory. It too used PORTB, but with an added twist: ANTIC and the CPU could access different banks. This provided headaches for some owners of "older" upgrades, but few programs took advantage of this feature (SpartaDos Wedge and VideoBlitz demo only). Upgrades for the 130xe include replacing one set of 64k chips with 256k chips, raising the RAM to 320k. Adding another 256k for 576k total has also been done. These were designed by Scott Peterson, as was a 1088k upgrade.

PART II - Video

Upgrades

The most common video upgrades are the SuperVideo series, described in AC 2/6. Plans were provided for the 600xl, 800xl, 1200xl and 130xe. The SuperVideo upgrade provides the forgotten chroma signal on the monitor port. It corrects a number of errors in the parts in the Atari video circuit, resulting in a clearer image, particularly on monitors.

Providing TTL output was also covered in AC 2/6. Bob Woolley provided plans for the circuit, as well as instructions for getting TTL output from an XEP80. Be warned that the output is not in the standard Atari colours; on a CGA type screen, the sixteen possible shades are translated into eight colours.

80 column devices

Since the 400/800 were released in 1979, people have been clamouring for better text displays than the default 40x24. Two products were released for the 800: The Austin-Franklin 80 column board and the Bit 3 80 column board were both for use in the Atari 800. They replaced the third memory module. The Austin-Franklin board came with a "Right Cartridge" which provided the drivers.

Removing the cartridge disabled the board. Some software would not run with an 80-column board installed.

Ace 80/80xl was a cartridge released which provided 80 columns by using bitmapped graphics on an 80 column screen. A similar technique was used in the Newell Omniview, an add-on for their Omnimon.

Atari's entry into the 80 column field was the much maligned XEP80. For maximum compatibility, the XEP80 attaches to the computer via a joystick port. It includes three character sets, 8k internally, and a parallel printer port. The software provided by Atari supports a 320x200 graphics mode. This mode only supports direct bit images. Hacks have been released which hook the XEP80 on via the parallel bus.

Recent terminal programs have added two other display techniques. ICE-T uses a graphics 8 screen and fine scrolling for its display. FlickerTerm uses two graphics 0 screens a half-character apart, each displayed during alternate vertical blanks.

Genlock

In October and November of 1991, Michael St Pierre published articles in the SLCC Journal describing plans for a monochrome Genlock. A genlock is a system to synchronize live video with a computer image. Graphics can be overlaid, faded in or out, or used for titling.

In 1994, Michael announced Prism Studio, a full colour genlock. It is sold by Mytek.

Computer Eyes

Computer Eyes was a video capture system which plugged into two joystick ports. It could render images in a variety of modes. It required a composite video source. (ANL 35, 53)

Easy Scan

Take a cartridge, add a fibre-optic cable, and hook it onto a printer, and you've got Easy-Scan, an image scanner for the Atari 8-bit. Innovative Concepts produced this item. (ANT 7/6, 43)

PART III - Operating Systems

Computer OS
-------- --

400/800 Rev A. No self test; Memo Pad mode.
Rev B. Fixes several bugs in Rev A.

1200xl XL OS. Some incompatibilities with 400/800 OS

600xl/800xl Revised XL OS. Includes parallel
bus handlers. Internal BASIC.

65xe/130xe Revised XL OS. (as above)

xegs Modified XL OS. Self-test mode
changed. Internal Missile Command
and BASIC.

Operating System upgrades

UltraSpeed + OS : from CSS. Supports high speed disk
communication. Drives 1 through 9. Any RAM upgrade. Includes
three modes: standard XL/XE OS; 400/800 OS; UltraSpeed+ OS. For
XL/XE systems.

Omnimon: from Newell. M/l monitor for 400/800. Installs into
$C000 page of memory, otherwise unused.

RAMROD OS: from Newell. Replacement for 400/800. Includes
accelerated floating point math package.

RAMROD XL: from Newell. OS speed-up routines, fast math, and
Omnimon. Includes option for second OS.

XL Boss: from Allen Macroware. OS replacement for XL model
computers. Includes m/l monitor. 400/800 OS compatible.

TurBoss: available from KP and Best. Fast math and fast screen
routines. For XL/XE computers.

DP OS Version 4: my own effort (donï¿½t ask about versions 1 through
3!). Fast floating point math, fast screen display, graphics 0
screen dump, fast keyboard repeat. For XL/XE computers.

PART IV - Sound

Voice Master

Covox sold the Voice Master and Voice Master junior. These
would capture and record speech. Bundled software attempted
recognition of commands, with limited success. (ANL 47, 44)

Parrot

The Parrot was a sound digitizer sold by Alpha Systems.
Resembling a paddle, the device had phono jack for input. Antic
provided plans for a similar project, called the Antic Sampling
Processor. (ANT 8/8, 11)

SoundMouse

Among the more esoteric products ever released was the
SoundMouse, which interpreted sound to provide a reading on a
paddle register. It did not act as a digitizer, like the Voice
Master and Parrot did. Bundled software made the lava lamp look
mainstream in its appeal. No commercial applications taking

advantage of this unique device were released.

Gumby

Chuck Steinman of DataQue created this set of plans for building stereo sound by installing a second Pokey chip (Pokey and Gumby, get it?). Once installed, the second channel has all its addresses 16 bytes higher in memory ($D210 - $D21F). A small number of demos have been released in stereo.

ftp://atari.archive.umich.edu/Atari/8bit/Sound/gumby.arc

POPS

Lee Brilliant, ANALOGï¿½s resident hardware guru, came up with this system for stereo sound, running it off the clock line on the SIO bus. As with Gumby, it requires customized software to use. (ANL ???)

MIDIMATE

MIDI stands for Musical Instrument Digital Interface. It is a system for computers to record, replay and control musical instruments. MIDIMATE, when combined with MidiTrack software, permits an Atari 8-bit to take control. Why buy an ST? (ANL 33:26)

SIO-2-MIDI Interface

This is a set of plans to make your own MIDI interface. Limited software is included.

ftp://atari.archive.umich.edu/Atari/8bit/??/sio2midi.arc

PART V - Other Neat Stuff

Zucchini

In ANL 59,60 and 62, Dr. Lee S. Brilliant provided plans and software to turn a surplus Atari into a printer buffer for another Atari. He called it "The Atari Zucchini".

The Printer Buffer Routine (PBR) and Disk Emulator Routine (DER) came from B.L. Enterprises. They were cartridges and cables which worked in a similar fashion to the Zucchini. The PBR provided a buffer, while the DER emulated a disk drive on the remote computer. Stock XLs gave 403 free sectors; a 130xe would give 914. (ANL 65, 67)

PIA2

With the use of PORTB for RAM banking, hackers were looking for more parallel outputs. This plan, for adding one more PIA chip, includes notes for adding two more. It was intended as a means to control large RAM upgrades. (AIM 3/2, 16)

Critical Connection

A long time ago, in a galaxy far, far away, was a mystic operating system known as CPM. A company named USS Enterprises produced the Critical Connection, a device to permit a CPM computer to emulate disk drives for the Atari. It was a cable, plus software for the CPM end of the system. The CPM system could also act as a printer buffer, and the CPM keyboard could be used in the place of the Atari keyboard. (ANL 39,103)

SIO2PC

With the demise of CPM and the rise of the IMI cartel (IBM-Microsoft-Intel) a new system similar to the Critical Connection arose. Nick Kennedy developed the SIO2PC hardware and software, which permits any PC with a serial port to act as up to four disk drives for an Atari. It can also act as a printer buffer.

WIMA Radio, Lima, Ohio

This radio station, when automating 6 broadcast hours daily, created a hardware and software package built around a 130xe for control. Control was via joystick ports and tone decoders. (ANT 8/7, 30)

Comp-U-Temp

This provided 8 or 16 channels and 2 or 4 sensors. It would monitor the temperature, with options to log results to disk or printer, or to sound an alarm if the temperature strayed out of set boundaries. The software was described as "cumbersome". (ANL 48, 35)

Atari Lab

During one of their periodic restructurings, Atari decided to sell their computers as educational. Thus, the Atari Lab series was produced. The two kits released provided experimenters with tools to measure light and temperature. Of course, the next restructuring left this an orphan product.

Turbo 816

Released by DataQue, this provided a replacement OS as well as a replacement for the 6502 CPU. A 65816 was substituted, providing new opcodes and a 24 bit address space (16Megs vs 64k with the 6502).

Sweet 16

Released by Fine Tooned Engineering, this provides a 65816 CPU to replace the 6502.

MicroNet

Supra provided the Atari community with its first networking product. MicroNet provides nine SIO connectors. Eight are for computers. The ninth goes to whatever peripherals are to be connected. The system served to isolate the computers electrically. It did no software checking, meaning that two or more users attempting to print or save at the same time could trash each others output. (ANL 51, 76)

MultiPlexer

CSS provided a better way to network. The Multiplexer system requires one host system which has all the disk drives and printers for the network. The slaves are connected via the cartridge port to the host, and all their disk and printer i/o is rerouted to the host. All the systems involved require their OS replaced with a special multiplexer OS.

GameLink II

The most recent innovation in networking the 8-bit Atari, GameLink II permits up to 8 machines to share information for interactive games. Currently, only the Maze of Agdagon supports this system. DataQue sells cables and the game.

J-Net

Released to on-line services and possibly to the Umich archive as well, this set of programs was designed to interface computers by the joystick port, using 3 bi-directional data lines and two control lines.

MIO

ICD manufactured this wonderboard in 1987. Connected to the PBI or ECI, it provided either 256k or 1Meg of RAM, two RS232 ports, a parallel printer port and a SCSI hard drive port.

MIO II

Currently under development by Fine Tooned Engineering, this PBI/ECI board will provide an interface and power supply for an IDE hard disk. It may also include extended memory support for CPU upgraded computers, as well as a parallel port.

Black Box

CSS manufactures the Black Box, a PBI/ECI device that offers an optional 64k printer buffer. Its main attractions are its m/l monitor, 19200 baud RS232 port, parallel port, and hard disk interface. The parallel and serial ports do not use standard DB9 or DB25 connectors; custom cables are required.

Floppy Board

This is an add-on to the Black Box, also from CSS. It permits standard floppy drives, 360k, 720k, 1.2M and 1.44M, to be

attached to the Black Box. Since they are connected to the PBI, these drives operate extremely quickly.

Supra/KP Hard Disk Interface

Supra released one of the first hard drives for the 800xl. It hooked up via the PBI. KP bought the rights to the interface from Supra.

Corvus Hard Disk System

The earliest hard disk interface, the Corvus system hooked up to a 400/800 via joystick ports 3 and 4. A custom DOS would be booted from a floppy disk to permit the computer to access the hard disk, which was divided into 720 sector partitions.

IDE Hard Drive Interface v1.0

New from Poland, this promises to let your XL/XE take control of new IDE hard disks. Its design will permit future systems to break the 16 megabyte boundary.

mailto: CONRADUS@plearn.edu.pl

Amdek 3ï¿½ drive

Amdek released a new standard for disks: a rigid 3ï¿½ plastic disk that could store a whopping 360k (but youï¿½d have to flip the disk for that). It never caught on.

ATR-8000

SWP Computer Products made this original wonder-widget: Serial and parallel ports, standard floppy interface, optional hard disk interface and even CPM and MS-DOS add-ons.

512k ROMDisk

From Klaus Peters in Germany, this system provides a solid-state alternative to floppy and hard disks. Using up to 8 27512 EPROMs, this setup provides high-speed PBI access to commonly used software

R-Time 8

This is a clock cartridge for any Atari from Fine Tooned Engineering. It includes a pass-through connector so that any other cartridge can be plugged in as well. Though primarily intended for SpartaDos, software for other DOSes is included.

???? Clock Cartridge

Announced ï¿½way back in Atari Classics 1/1, this product was intended as a replacement for the R-Time 8. Software difficulties have kept it from being released.

Mars-8

This is still under development from Fine Tooned Engineering. For 800xls only. Memory expansion of 256k, 1M or 4M. Install internally Action, Basic XL/XE, MAC/65, SpartaDos X, R-Time 8.

Atari 850

This device hooks into the SIO line, and provides 4 9-pin RS232 ports and a 15-pin parallel port. The RS232 ports are NOT IBM PC standard. The MIO and PR Connection use the same pinout.

P:R: Connection

This device plugs into the SIO line, and provides 2 9-pin RS232 ports and a 15-pin parallel port. It is powered by the SIO line. The Atari 1200xl requires an internal modification to work with this device, or with the Atari XM301 300 baud modem.

Sidersï¿½ Serial Interface

With 850s and P:R: Connections becoming increasingly rare, Kenneth Siders released plans to build a high-speed serial interface using only 2 ICs.

MPP 1000 Modem

The joystick port is a parallel port. The SIO port is a serial port. So where would you hook up a serial modem? MPP (now Supra) plugged a 300 baud modem into the joystick port. Running at 300 baud, with software that couldnï¿½t d/l files longer than 32k (an Xmodem bug), this is what got me started in the on-line world, and what got Supra started in the modem business. Wonder if I could trade in my old 300AT for a new 33.8k?

Voice Box II

Manufactured by the ALIEN Group, this speech synthesizer even made it into TIME Magazine in their "Machine of the Year" issue in 1982. Plugging into the SIO line, this device would produce speech of the traditional computer variety.

R/128 RAMdisk Printer Buffer Spooler

Protronics of California announced this 128k RAMdisk/printer buffer which interfaced via the joystick ports, offering it as a replacement for the 850. A 512k upgrade was promised. (ANT 2/8, 106)

N1858-32

Newell Industries announced this 850 replacement in 1983. It offered two serial and one parallel port, along with an expandable 8k printer buffer. (ANT 2/8, 106)

Oscar Model 1

This bar-code scanner was from the Databar Corp. The intent
was to permit the speedy entry of computer programs which would be
encoded in magazines. (ANT 2/8, 107)

1200XL PBI

Hackers love the 1200xl for two reasons: because of all the
space available within the case, and because of the great keyboard.
Bob Woolley came up with this set of plans for adding a parallel
bus interface to the 1200xl.
ftp://atari.archive.umich.edu/Atari/8bit/Modifications/pbi1200.arc

Arm Your Atari

ANALOG magazine provided this unique information on
interfacing an 8-bit to a Radio Shack Armatron remote controlled
arm. Positioning was determined using the paddle/potentiometers,
and control was via the PIA (joystick pins).

No, if you have to flip it over to read the other side on one drive,
you'll have to on every drive, as otherwise it would be spinning in
the wrong direction. (I suppose it would, in theory, be possible to
read the bitstream backwards and then reverse it, but you would have
to be able to interpret all the sector marks and such in software,
which you generally aren't allowed to do.)

>everything uses soft sectoring now, it's faster anyway.

Wrong. Most (all?) PC drives use the hole for timing. Use of the
hole does not imply hard sectors, as long as there is only one hole in
the disk. I suspect that the PC uses the hole to time the rotation.

Hard sectoring uses different disks--I have a few of them, and they
work great with my Atari, as it ignores the hole, but the PC won't
deal with them. The difference is that they have bunches of holes in
the disk, so as it spins, the drive can use the hole in the jacket to
determine where the sectors begin, instead of using special codes
written when the disk is formatted. Hard sectoring is, to the best of
my knowledge, not used anywhere anymore, as it probably has trouble
dealing with the number of sectors per track available on modern
systems (among other reasons).

Hi...

I just got my old 800XL up and running after about 10 years of collecting dust, and I just bought a disk drive for it. I got some games, but not enough. I can find them on the internet, but I don't know how to get them down to my Atari... Are there any programs out there that will make my PC read and write to Atari disks??

Yeah, I could get one of those cables, but it just seems to me that disks would be easier...

> disco y quedan grabados
> normalmente en tu PC...

El problema es que los discos de atari booteables, los que no dan
directorio (que son bastantes) no funcionan con este metodo.

Existe un metodo alternativo, que es convertir los ATR o XFD en archivos
DCM usando el programa Imagic95. (el problema es que necesitas windows
95 o NT para correr esta utileria), acto seguido, copiar los archivos
.DCM a discos de 5.25" usando util.exe. Despues, en la atari se utiliza
Disk comunicator que convierte el .DCM en un disco de Atari
completamente usable !!

Bueno, los programas necesarios son
En la PC:
Imagic95
Util.exe

En la Atari:
Diskcomm.com
My DOS 4.53 o Superdos 5.1 o cualquier DOS de doble densidad

todos los programas estan disponibles en:

http://www.umich.edu/~archive/atari/8bit/

Actualmente estoy trabajando en una utileria de atari que lee los ATR y
los convierte en discos booteables.

> Despues yo uso el util.exe , otro programa para PC

> Atari
> pese a que el programa util te ermite formatear.
> El formato es un formato raro de l xf551

En realidad es formato de 180K SSDD de Mydos, y no es exclusivo del XF551. el Indus GT y un 1050 con Happy tambien sirven, Aunque es mejor con el XF.

> algo pal atari.
> 3ro. el el util.exe tienes que ejecutar:
> util /W /B b: filename.ext, siempre que tengas el util

Parece que usas una version mas vieja del programa util ... existe una version nueva bajo el nombre de MyUtil.zip

y la linea de comando es

util -WB b: filename.ext

No se a ciencia cierta las diferencias entre las dos versiones, pero parece que son principalmente en la velocidad.

El gran problema con util (o myutil) es que no funciona en todos los sistemas, he encontrado PCs donde de plano no sirve y otras en las que solo simula copiar y al llegar a la Atari ... Sorpresa !, no lee el disco.

Speaking of Turbo BASIC ...

I once wrote a graphics program that did "poor man's ray-tracing" to compute a realistic image of a "rippled plate" illuminated from a particular direction, in GR.9 (16 gray levels). This program took 56 minutes to generate a complete image in Atari BASIC.

In Turbo BASIC it took 8 minutes.

(And for what it's worth, I ported it to the VAX 11/785 computer at college and it ran in 6 SECONDS. I haven't tried it on today's much faster VAXen and Alpha systems. :-))

How young is he? I have a copy of "Kids and Computers", the Atari version
around here somewhere I would be willing to sell cheap. It's nice for
younger children, but wouldn't be of much value for a teenager who is
trying to learn serious programming.

SB > asking prices (US dollars) for the following Atari 8-bit equip-
SB > ment:
SB > - Atari 800 w/BASIC, power supply, and switchbox

Current market is about eleven dollars. That's $5 (or less) for
the 800, $5 (or more) for the power supply, and $1 for the cart-
ridge. I've seen several 800s at hamfests and computer shows in
recent years, including Atari-specific shows, priced as low as this
and nobody buys them! (All you people out there who think this a
great bargain should be going to these shows and snapping up all
those 800s!)

SB > - Atari 1050 with SIO cable and power supply

Current market for an unmodified (without true double density)
drive is about fifteen dollars. That's $10 for the 1050 and $5 for
the power supply, and it must be clean and in good condition.
Double density drives command higher prices.

Details? Cracking is nothing more than tracing an assembly language program, determining where and what it does when it finds/does not find the protection, and hacking around it. Thats all. Everything else is just tools to get the job done ("lockpicks"). Something as simple as a disk editor to as sophisticated as resident ML monitors, freezers, etc. End results are the same. What kind of protection is realtively unimportant. (Unless you are looking to duplicate what they have used).
Most changes amount to 1 or 2 bytes.. What you really need is an indepth knowledge of HOW the I/O on the atari works (see tech ref in http://nimitz.mcs.kent.edu/~clisowsk/8bit.html) and knowledge of the memory map (mapping the atari from compute books) and 6502 assembler.
If you have APE you can get an idea of what happens if you have any copy protected disks and a disk drive connected in conjunction with your atari - so called "fuzzy sectors" are "weak" (Adventure International used secs 4 and 5 with this scheme) Trying to read the sector with a disk editor would produce different, unduplicatable data from the fuzzy - but the program would index the timing to get the correct data. "Phantom" sectors I always took to mean "missing" sectors, i.e. sectors are numbered 01-12 in each track, say 4 and 5 were missing, usually there were 2 or 3 of another sectors, i.e. a sector with the same number. Protection would read one and then the other, comparing data; data the same, protection invalid. (Lots of Synapse games).
Ape will allow you to see which sectors contain the protection. Makes it easier to crack programs.

As with many computer occupations, with cracking you "Learn by doing"
You really cant read about it.

1701. New version of PC Xformer at emulators.com

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-29 00:00:00 UTC
From: brasoft@coho.halcyon.com
Message-ID: <504v7j$270@news1.halcyon.com>
Source record: 80821

Many people have been wondering what the hell happened to the PC Xformer upgrade that was supposed to be released last month and have been sending me nasty email. Let me explain.

First of all, my company Branch Always Software now has a new name:

EMULATORS, INC!

We also have a new web page at:

http://www.emulators.com/

Most of the delay in introducing the new versions has been due to delays in getting the domain name registered, getting our internet provider to get their act together, and getting the new company together.

Unlike Branch Always Software which only dealt in Atari 8-bit an Atari ST emulators, Emulators Inc. will develop and market non-Atari emulators as well.

As far as PC Xformer goes, two new upgrades are in the works:

PC Xformer 3.6 is an upgrade to the DOS version of Xformer that most of you already use. A new demo version of PC Xformer 3.6 will also be made available on the new web site starting next week. PC Xformer 3.6 will be in stores later in September.

PC Xformer 4.0 (a.k.a. Xformer 96) is the new Windows version of Xformer. Although it is not ready to ship yet, we will be posting "as-is" beta versions of it on our web page for you to try and give feedback on. Xformer 96 should be in stores in the next few months.

Those of you with Atari ST computers will also be interested in the new Gemulator demo which will also be available on the web page starting September 3. So hope to see you there.

By the way, does anyone know what the status is of the So. California show that was scheduled for Sep. 21? I'd love to come down and demo the new products but I haven't heard anything first about that show or any other show coming up. If you have any info about upcoming shows send me an email.

- Darek @ Emulators, Inc.

Hi all...
Has anyone been able to download the 'xl-it' atari emulator from the
the following url?
www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html
I have tried several times with a couple different browsers and have been
unable to access this page. If you have the emulator, and you feel it is a
good one, please either send me a copy via email or let me know if there is
an alternative site where this program is available. Thanks in advance.
Tom

Wizard of Wor was produced by Roklan. They also made Space Invaders Deluxe, Gorf and maybe some other arcade translations; I can't remember.

I do remember that their translations were extremely accurate: all the little nuances were in place. Made me feel like I was playing the real thing! Judging from their conversions I get the feeling that they really loved the originals.

I found his home page at http://members.aol.com/autismuk/ but the only emulators he has there are for the DEC PDP-11 and something called the chip-8. There is no subdirectory (link) for a26home.htm.

To correct my earlier post, the page is there. You have to use
http://members.aol.com/autismuk/a26home.htm because he does not have
this subdirectory linked to his homepage.

This is part of my auction and I thought Atari 8-bit users might be interested.
The whole auction file (including rules) is at
http://www.cs.unc.edu/~brownde/museum/auction.txt

Atari 8-bit Lot: Bid: $30 kloesch

Atari 130XE (128K)
Power supply
Manual
5 cartridges:
Pac-Man
Qix
Dig Dug
Bug Hunt
Rescue on Fractalus!
More stuff:
Two Atariwriter cartridges, and a manual
Atari Artist cartridge
Pilot programming language cartridge

Check the docs for SIO2PC; there's a fairly complete explanation of
the header in the ATR format.

There was one -- I think it was released by CBS Software. It was a pretty nice translation, although the graphics could have been better.

Trying to connect a Quantum 52MB drive to the MIO and
the only working HDFMTPH program I have is PH6. If
you've got other versions, then please email them
to me or tell me how I can go about getting them. I
understand that there are various versions of the
formatter floating around - I figure one of them
ought to work.

Hi everyone. I'm looking to buy six 16k ram cards to populate a couple of Atari 800's.

Thanks!
Dennis

1716. FS: Assorted Atari Items

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-29 00:00:00 UTC
From: cvotter@prairienet.org
Message-ID: <5037q9$sod@vixen.cso.uiuc.edu>
Source record: 80916

We have the following Atari items for sale. Unless otherwise
noted, none of these pieces include power supplies or SIO cables (as they
are being used with our 130XE. :))

Atari 1200XL with Atari Basic cartridge: $25.00+s/h

Atari 1020 Printer with a roll of paper
(One of those narrow carriage printers): $10.00+s/h

Atari Touch Tablet with stylus and
interface cable: $15.00+s/h

Atari XM301 300bps modem with
manual: $ 7.00+s/h Works on 130XE,
65XE, 800XL, or
48K 800, but not
on 1200XL.

Atari SX212 1200bps modem with
dual SIO and RS-232 interface: $15.00+s/h

Concorde Atari compatible dual
disk drives with SIO cable: $25.00+s/h Note, these drives
are considerably
sturdier, but
consequently heavier
than the 1050 drives.

If interested in any or all of these items, please leave email.

Yerf!

Otter

>know how to get them down to my Atari... Are there any programs out
>there that will make my PC read and write to Atari disks??

There are some programs, but they only work with certain types of
drives. If you tell us which model of drive you have on your Atari,
it would help.

>Yeah, I could get one of those cables, but it just seems to me that
>disks would be easier...

If you're going to do much with your Atari, you'll never regret
getting an SIO2PC cable. It's worth it alone for the fun of telling
people that I use my Pentium system as a file server for my Atari!

From: ericcron@wwa.com
Message-ID: <505hfa$f15@kirin.wwa.com>
Source record: 80832

Does the Chicago area need an 8-bit BBS? I would love to put one up. I have the "FTP" list but I would love to be able to call one place and get whatever I needed, just like in the old days:

Anybody remember RuneQuest?
The Beer Can?
Some crazy BBS with a "Hitch Hikers Guide to the Galaxy" theme? (Sysop was PrezZaphod I believe)

Anyway, I would appreciate any input, please let me know if you think there is a need, how much drive space would be needed to handle just about everything anybody would want, and any other information you could think of that might be helpful. I would want to run BBS Express, (By the way, every Atari board I was on back in ?88? was running Express by Ledbetter, I was surprised to see that the author of the "8-bit Faq" had never seen it. And yes, I believe it only supported X-modem transfers.) so if that is a bad idea nowadays let me know. I guess I just want to know that all of that software out there that SOME PEOPLE JUST WANT TO MAKE A PROFIT WITH would have a safe home now and in the future for people who stumble across this newsgroup at 1am like I did.

I am also in the market for the ?850? interface that would allow me to use any speed modem with my 800xl

Oh yeah, I'd like to publicly thank Bob Klass for helping me get my new baby! For all of you wanting to purchase 8-bit stuff I'd see him first, his prices are WAY lower than all of those other dudes I see posting here!

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-30 00:00:00 UTC
From: eru@sover.net
Message-ID: <322645a7.10805290@news.sover.net>
Source record: 80833

Hello all! New requests keep on coming in, so I am going to go ahead
and make at least a dozen cables. Cables will be $25 + any shipping
costs, and should be available within the next two weeks. Keep the
requests coming!

Cable features:

db25 receptacle, eliminates 25 pin / 9 pin worries
1/2 sio cable, to connect to the Atari
1489 chip, socketed of course!
nice project box (Like the blue Radio Shack ones)
$25 price tag

Cables with different configurations, such as pass-through sio ports,
heavy duty aluminum boxes, 2 chip versions, and the Ape Prosystem
cable will be available after this initial period, and after I get
settled in Boston. (I leave the 15th)

E-mail eru@sover.net if interested!
Rick Ziegler

Absolutely! It was pretty good, if a tad blocky. You may find it at Yogi's
web site (do a Yahoo search for "Yogi", for the exact address).

>
> es-
The version of SIO2PC I designed used a schottky diode because its forward drop is small and I didn't want to risk an invalid 0 state due to too much drop. I think it was a 1N5817. In reality, a common ten for a dollar switching diode (1N914 or 1n4848) works fine, as does a crystal diode, such as 1N34. All of these are found at Radio Shack.

I didn't use a 1489. If you use one, the prefix probably just denotes the manufacturer, which is of no consequence.

There are two ways to do it. You can use a 1489 and its companion (I forget - 1490?) or something like a MAX232. The 1489 and its complement do the conversion in only one direction. One does TTL to RS232 and the other does the reverse. The advantage of the '232 is that it takes only one chip to do the job, plus it only uses a single 5 volt supply, which the atari puts out. The other chip pair requires both 5 V and plus and minus 9 v (or so) supplies. Since the '232 is now under two dollars, it's easy to choose. Of course, there are ways to cheat. The RS232 interface will almost always work with TTL levels if you invert them. (On TTL, most positive is logic one, for RS232, most positive is logic zero.) The Atari will accept the bipolar outputs of the PC's serial port, if you clamp to 5 V and block reverse polarity ... But you're getting complicated and risking some damage to save a quarter.

Incidentally, you'll also see the MAX232 as the ICL232 and probably some other prefixes as well. When a chip becomes popular, it is usuallly licensed and second sourced by other chip mfgrs.

Regards,

Nick Kennedy (The SIO2PC guy)

It's even worse... it only supports unshrinking (LZW). I happen to be the author of the program :) It's written in C and compiles with Lightspeed C. I only wrote it to test the compiler but I never finished it due to lack of memory.

I have the following Atari Hardware and Software available as of
8-30-96

EQUIPMENT:

2- Atari joysticks

Antic Magazine Software Disks

BOOKS:
Advanced Programming Techniques for Atari by Linda Scheriber(orig
price $19.95)

Atari Programming with 55 programs by Linda Scheriber(orig price
$21.95)

32 Visicalc Worksheets by Ted Lewis (orig price $26.95)

Take any of the above books for $5 & SH or
Take all three books for $10 & SH

SOFTWARE:

Most include manual/instructions

1. THE NEWSROOM (5 disks with lots of clipart)
this is an excellent publisher $20 & SH

2. THE PRINT SHOP - a excellent bundle including:
The Print Shop
The Print Shop Companion
Three Graphic Disks
Holiday & Special Events Graphics Disk
No Frills Software Fonts & Borders 1

7 Total disks $20 + SH

3. TYPESETTER by Xlent Software $5 & SH

4. MAGNIPRINT by Alpha Systems $4 & SH

5. a 3 disk bundle by HI-TECH EXPRESSIONS include:
CardWare
AwardWare
AwardWare Graphics $8 & SH

EXCELLENT GAMES AVAILABLE:

1. KARATEKA by Broderbund
excellent Karate game $5

2. MICROLEAGUE BASEBALL(1984) $5

3. LEADER BOARD - Dual Pack
Excellent Golf Game includes
Double sided disk with the LEADERBOARD
on one side & Tournament on other $5

4. HACKER
a simulation games that forces a player to
hack their way into a system. This
game purposly comes with no instructions $4

Take ALL the above software in a disk case for $50 & SH

---

40 Blank 5 1/4 Disks $10 & SH
with disk case $13 & SH

Money order or personal check (with stuff being sent out when check
clears).

Buyer pays shipping.

Is there a utility that can convert the "raw" .exe Atari files to .atr files?
I tried hooking up the old 800 after "finding" this newsgroup, and the disk
drive doesn't work. So, I am attempting to use an emulator. I have the
"Xformer" demo and I would buy the full version, but I'm wondering, how is
the sound reproduction on it? I was forced to use "PC 64" (the Commie emulator)
to play my favorite old games with sound, but the commie never had classics
like "Cypher Bowl" or "race in space" and the commie Ballblazer sucks!

Any help is appreciated!!!

matty

p.s. Wizard of War was by Midway in the arcades, reproduced in cart form on the
Atari by Roklan (as stated by someone else), I still have the cart, so I feel
like somewhat of an authority on this.

1732. PC to Atari 1050 drive (how's that?)

From: uniden@epix.net
Message-ID: <32275165.2119@epix.net>
Source record: 80845

Okay, I have the old Atari 1050 drive...

I would like to use one of those cable thingies, however two things are stopping me...

1) My Pentium is on one side of the house and my atari and TV are on another side (I don't have an extra tv hanging around, and moving either would be a pain in the butt)...

2) I've been reading FAQ's and web pages for about a week, and I used to consider myself a fairly techno-savy kind of happening hip dude. No longer... The whole atari world is pretty much a mystery to me and I haven't been able to understand anymore than 5% of all the jargon... I'm so clueless that I went to Yogi's site and got completely lost with binaries and images and .xfd and .atr files... ugh.. And that "Newbie Atari user's faq" is obviously meant for someone who has bought and used Xformer.....

Whew... just had to get that out... I will now go back to lurking, thank you :-)

I'm still more into using a disk on my PC to write Atari files instead of a cable....

-Tom
(and to top it off, my 800xl is on the fritz at the moment...grrr)

The 1489 version requires only one very cheap chip, about 45 cents, and
one common diode. The 1489 design also runs off a single
5v+ power supply, not a split +/- supply.

The Max232 version is expensive, hard to build in comparison with its
external capacitors, and is more prone to failure. I suppose you
could use the Max23? with its internal capacitors, but its even
more expensive, around $6 a pop.

Steve

I would like to study it. I've been studying interpreters and
compilers, but most of the examples I've seen are for much larger
machines, and written in c. Which might be fine for larger machines.
But I need to see how certain things are done on a 6502, specifically
the Atari 8bit.

the controller uses the timing hole to start the track format sequence.
the old Atari 1050s and such would dummy up a timing hole pulse to get
the controller to format a track. once formatted, the read or write
sector command didn't need an index hole except for timeout, which the
Atari handled with its own timer. all drives since the Apple II use
soft sectoring - not the same as the index hole.... hard sectoring used
16 index holes in the disk!

Meaning you use them just like the menu program I.E. load them as D1:
in APE, the disk in D2: you want to load from. WARPLOAD should work
for that.... but your disks need to be formatted with mydos, not atari
dos. (sorry. its a minor change I can probably re patch it if enough
people want it)

It sounds like Montezuma's Revenge, an excellent game. The Monty version
was the stripped down version. There isn't much difference other than the
opening screen, and some graphical details.

A thoroughly enjoyable game..... the burning ropes you have to grab on to
before they burn to nothing always messed me up!

Hi there, yes I think I have that ZIP program.... It is good as long as the zipped files have been *stored* (I think thats the method that it works on), but all other methods of compression are dumped out by the program..

Anyway I have a small *beast* here if I do need to unzip something, but all I was suggesting was that if the ATR etc files are Zipped then Atari people would know to stay away from them... (btw, I am an Atarian from start to finish, I only have the beast to process mail from the Internet onto my Atari BBS (grin)...)

Have you run this under PC-Xformer 3.x yet? If so, I"d love a copy.
I own both the BXL and BXE carts and BXL tool box. I can't get the BXL
runtime program to work with PCXf 3.0. I have lots of stuff I've
written in BXL that I'd like to run ar work on the PC under PCXf.

The best I've seen the 8-bit machines do is 4096 colors using Jeff
Potter's Color View and later Color Squash. Colrview did some fancy
gr.9 manipulation and three 8K files. CSquash converted these files
into a single compressed file with on the fly decompression. They
worked with 12 bit color or 16 levels/primary (red,green,blue). I wrote
a program to print the CV pix on a Star NX2420 rainbow printer. It's
pretty easy to make the three files for the 12 bit configuration. I can
include a short BASIC XE listing in a day or two. 24 bit coding would
be similar, but would NOT be viewable using the 8-bit computers.

YES! There is a program I can e-mail to you called IMU14.ZIP It can
read the directories of both .ATR and .XFD images, Insert and extract
files stored in an MSDOS or AmigaDOS directory into .ATR or .XFD
images. Yes this does work on the Amiga too. There is also an Amiga
usable 800XL emulator that I can e-mail too. It is similar to the PC
Xformer.

Hi Robert! Glad to see people still remember Color View. I wrote a GIF encoder for the 8-bit that tried to convert the A8 colors to RGB values. It was 3 256-byte tables. I haven't checked recently how good my translation was; I suspect those 8-bit emulators do a better job.

1756. Pokey the NEW Atari 800/800XL/5200 emulator released

Newsgroup: comp.sys.atari.8bit
Date: 1996-08-31 00:00:00 UTC
From: mhill@one.net
Message-ID: <3228bc02.13947381@news.one.net>
Source record: 80867

Everyone,

8/31/1996

Pokey version 0.60 has officially been released to the masses!

Pokey is a FREEWARE Atari 800/800XL/5200 emulator for MSDOS systems.
I recommend a Pentium for decent emulation. Pokey has alot of great
features. Here is just a highlight. Check out my web page for more
detailed info.

* Runs on MSDOS Systems (Pentium Peferred)
* 800/800 XL emulation
* 5200 game console emulation
* Run 8K/16K/OSS Super Carts
* 320 X 200 screen (adjustable) or Mode X (320 X 240 or 360 X 240)
* Supports up to two PC joysticks (swapple on the fly or upon loading)
* DLI and VBI supported.
* All antic modes
* Player Missle Graphics with collision detection
* GTIA graphics
* Reads XFD and ATR disk images
* Supports loading disk images on the fly in slots D1-D8 (menu driven)
* Horizontal and vertical fine scrolling
* System Monitor
* FREEWARE!!!!!! If you like it drop me a line, send me a postcard,
heck Ill take money too!

Im working right now on the following

* Sound Support (Soundblaster Compatibles)
* 4 Joystick Support (using printer port joystick interface)
* Faster Emulation (right now it seems like you need a fast pentium
for decent emulation. Ill know more when you guys start testing!)
* Support for converting MSDOS files to Atari disk images on the fly
* Paddle support
* 5200 keyboard support. Since the 5200 doesn't have any console keys
and uses the keys on the joysticks to start I can't currently start my
only 5200 rom image (frogger).
* 5200 Joystick Support. Might be there now but since I only have
a 5200 Frogger cartridge image I can't start....Not sure if it works
yet.

Im looking for assistance on the following areas.

* 5200 rom images. A friend gave me his 5200 game console and about 15
cartridges. I don't have a way to transfer them to file so they are

useless right now. Any help here would be appreciated.

*5200 technical information. I have the Analog article on 5200 hardware but hope there is more.

My web page contains more information on Pokey and some links to other 8-bit sites/emulators, along with alot of credit to those who helped me on the way! You will need to get the rom images from Xformer or some other source as they are not included in the archive. I do have a link for this on my page also.

So whats the url for the web paget? Read on! So go out now and grab your copy of Pokey and drop me an email with some feedback!

Thats because the 400 & 800's had BASIC revision A, and the XL's and XE's have the newer B & C revisions respectively. Rev B & C of basic included the built in display lists for the GTIA graphics modes, where rev A did not. Sure the 400/800 could DO the mode, just the BASIC version didnt have built in support display lists for it, hence the need to write them yourself.

Actually, all soft-sectored disks have ONE timing hole, regardless if the drive uses it or not.. However, I have a few hard-sectored disks that actually have 18 timing holes in them! whoa! Heh, and the label has 1977 printed on them, but they work just fine as Double density flippies on my enhanced 1050's!

I tried using one of them in a drive that actually uses the timing hole, and it does not work.. (atr8000 uses the timing hole to determine RPM, and it really confused it, like it was spinning 5000RPM hehe)

In DOS 2.5, press A for directory, and when it asks for the path
filespec, type 2:<return>
then when you see the list of files on drive 2, you can load one with
the L command, then type 2:FILENAME.EXT<return>

Yes, folks, one of my trusty 8-bit 5 MB removable hard drives just failed. SO! I figured that the best place to find a replacement would be here!

They are SyQuest Model 306R 5 MB removable hard drives. I would like 2 in good working order. I will buy or I can trade two of them from a SyQuest SQ555 - The 44 MB removable hard drive.

That's right I will trade you 2 5 MB hard drive mechs for one 44 MB hard drive mech!

Let me know!

The SQ555 are embedded SCSI and internal.

I�m selling the last of my Atari hardware.

```
The following items are for sale on a first come first serve basis, and I
will only ship items within the USA.
```

E-mail me at �tech204@apk.com� and I�ll get back to by phone or e-mail reply.

```
1 - 1050 with US Doubler/SpartaDOS Construction Set. $75

1 - SX212 modem with power supply and manual. $15

1 - XM301 modem with manual and software. $15

1 - Supra Corp. MicroStuffer 256K Printer Buffer. $15

1 - MAC/65 Cartrige and MAC/65 Tool Kit disk with manuals. $50

E-mail address "tech204@apk.com"

yogi, thanks for your reply. i read it, and learned something ;) i'm interested not in the technique necessarily, but in the nostalgic value. it's one of those "you had to be there" things.

1773. XE Game System -- Repair Hints??

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-02 00:00:00 UTC
From: revrandy@ix.netcom.com
Message-ID: <50df5e$qr1@dfw-ixnews3.ix.netcom.com>
Source record: 80786

I came into an XE game syste recently. The built-in Missle Command works, as does BASIC. But if I power on with one of the game cartridges in the slot, it either fires-up with the screen blank or it kicks into the diagnostic. Any suggestions? What am I doing wrong, or what may be wrong with the box??

I've got an XE with exactly the same problem. Attempting to clean the cartridge slot didn't help in the slightest. This is a big drag, as I don't often come across XE systems....

I'd also love to find out if there's some way of getting this thing back in shape....

Scott

I had to replace the cartridge port on my XE a few years ago, and now it
needs to be replaced again. This port seems to be one of the system's
'weak links'.

For the XEGS, I would nab the cartridge port from a scrap 600XL. On the
XE, the pins takes a right turn from the circuit board so you'll have to
either get an XE port, or keep the old pins on the board and solder a
600XL port onto them.

Good luck,

Tony

Subject: 1.1) What is an Atari 8-bit computer?

400 800 1200XL 600XL 800XL 65XE 130XE XE Game System

It was 1979 when Atari, Inc. entered the home computer market with the introduction of the 800 and the 400 computer systems. (The 400/800 models were first shown publicly in November 1978). These MOS Technology 6502-based systems run at a clock speed of 1.79 MHz, offering 256 colors displayable simultaneously, up to 320x192 graphics resolution and up to 40x24

text resolution in 11 graphics modes and 5 text modes. Video may be displayed either on a composite video monitor in the case of the 800, or on a standard television for both systems. 4 independent sound voices are available through the audio output of the television or monitor, each with a 3 1/2 octave range, plus there is a built-in speaker for key-click and other programmable sounds. The 800 has a second cartridge port and a full-stroke keyboard, while the 400 has a single cartridge port and a membrane keyboard. Each has 4 serial controller ports and an Atari Serial Input/Output port. Originally, both the 400 and 800 were sold with 8K RAM, but later most 800's were sold with 48K and 400's with 16K. Each includes the 10K Atari Operating System in ROM.

The introduction of the 1200XL in 1982 marks the single largest advance in the 8-bit Atari system. The 1200XL runs most software and hardware designed for the 800 and 400, but now runs a slightly more advanced 6502C microprocessor, and includes a full 64K RAM. The single cartridge and monitor ports remain, along with 2 controller ports. In addition, the 1200XL includes 4 programmable Function keys and a Help key, built-in diagnostic and graphics demonstration programs, and probably the favorite keyboard of any 8-bit Atari computer. Clicks previously outputted through the built-in speaker are now heard from the television or monitor's speaker. The revised 14K Operating System offers many new features, including an alternate International Character Set.

In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL. These new machines include most of the features of the 1200XL minus the Function keys and the demo program. But now both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Bus Interface, providing direct memory access to the heart of the computer. The 800XL contains 64K RAM while the 600XL has 16K RAM.

The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985. The 65XE is nearly identical to the 800XL in features, minus the PBI. The 130XE, however, offers 128K RAM, plus a few special new graphics capabilities. In addition, the 130XE replaces the PBI port with the Enhanced Cartridge Interface, continuing the powerful feature of direct memory access.

In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system. It offers the convenience of a detachable keyboard and built-in Missile Command game, while offering 64K RAM and full compatibility with the 65XE.

Atari Corp. officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

1996: Atari Corp. (http://www.atari.com/) is in the process of merging with upstart disk drive manufacturer JTS. In the short term, Atari is to continue supporting their Jaguar 64-bit home game console as a division of JTS. In the long term...

Subject: 1.2) What can I do with an 8-bit Atari?

What can you do with an 8-bit Atari computer system? Virtually anything you can do with any other type of computer!

Programming? Pascal, C, BASIC, Logo, Pilot, Forth, Lisp, 6502 assembler... Plus powerful unique languages like Action! and QUICK...

Word Processing? Try AtariWriter, Letter Perfect, Paperclip, TextPro, Bank Street Writer, 1st EXLent, TurboWord, Cut & Paste, Letter Wizard, Panther, Superscript...

Database? Try TurboBase, TurboFile, Synfile, Data Perfect, MicroFiler, MegaFiler, Homebase, Super Data Base 1-2-3, Small Business System...

Speadsheet? Look at Syncalc, Visicalc, TurboBase, Calc Magic, Turbo-Calc, SAM Budget...

Communications? There's Express!, BobTerm, Kermit-65, Omnicom, VT850, Chameleon, Ice-T, FlickerTerm 80, Term80...

Graphics? Print Shop, Newsroom, Blazing Paddles, Video Title Shop, Virtuoso, Movie Maker, News Station, Publishing Pro, Awardware, Page Designer, ChromaCAD, Rambrandt...

Music? Virtuoso, Music Studio, Music Construction Set, Songwriter, Electronic Drummer, Music Painter, Music Composer, AtariMusic, MIDI-Track, Digital Music System, Chaos Music Composer...

Alternate Operating Systems? There's the Diamond Graphic Operating System; SpartaDOS X, the 64K DOS on a "supercartridge"; the S.A.M. (Screen Aided Management) 80 column Desktop System; the Ultra Speed Plus OS; the TurBoss! High Speed O/S...

Hardware? A plethora of upgrades and add-ons are available, realizing improvements in speed, memory, sound, graphics, storage media...you name it!

Education? Colorful graphics, exciting sounds and full-screen editing give rise to hundreds of quality educational software titles.

Entertainment? The 8-bit Atari has long been famous for thousands of great games.

If you want to do something with a computer, chances are you can do it on an 8-bit Atari computer. While slower than today's PC's, the 8-bit Atari is far less costly than any of these, is easier to program at the machine level or alter at the hardware level, and has been documented more thoroughly than any of the newer computing platforms. The relative simplicity in design of the 8-bit Atari also means that many people find the systems more reliable than their modern counterparts.

The software for the 8-bit Atari is sometimes more powerful than on any other platform. For example, some Bulliten Board Systems are still run on 8-bit Ataris specifically because the BBS software available can be better than that

for any other type of computer. There is a reason for the relative quality of software on the 8-bit Atari. People program commercially for the latest PC's to make money; people program the 8-bit Atari because they want to -- they enjoy producing good software. It takes a team of specialized programmers to develop a major piece of software for those other systems; with the 8-bit Atari, a single person has the chance to learn the entire system, thereby developing greater pride in his programming abilities and his final product. The character of the programmer can shine through.

The 8-bit Atari owner can take pride that his computer platform was developed years before the PC or Macintosh were even on the drawing boards, but remains as useful today as it was in 1979.

For these reasons and more, the 8-bit Atari remains a viable alternative in today's home computer marketplace.

Subject: 1.3) What are the performance specifications of the 8-bit Atari?

Some of this section by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick).

Clock Speed:
NTSC machines: 1.78979 MHz
PAL machines: 1.773447 MHz

Graphics:
Mode Horiz.xVert.xColors text/graphics
0 40 x 24 x 2 text
1 20 x 24 x 5 text
2 20 x 12 x 5 text
3 40 x 24 x 4 graphics
4 80 x 48 x 2 graphics
5 80 x 48 x 4 graphics
6 160 x 96 x 2 graphics
7 160 x 96 x 4 graphics
8 320 x 192 x 2 graphics
9 80 x 192 x 16 luminence-only graphics
10 80 x 192 x 9 graphics
11 80 x 192 x 16 hue-only graphics
12 40 x 24 x 4-colored text
13 40 x 12 x 4-colored text
14 160 x 192 x 2 graphics
15 160 x 192 x 4 graphics
Normal (bordered), narrow (underscanned), and wide (overscanned) screen modes are available.
Screen modes can be mixed (by lines) down the screen using the Display List - a program which is executed by the ANTIC graphics chip every screen refresh:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines
Fine scrolling (both vertical and horizontal) can be enabled on any

line on the screen.
All other screen attributes (color, player/missile horizontal position, screen width, player/missile/playfield priority, etc.) can be ajusted at any point down the screen via a "Display List Interrupt."
Four 8-bit wide, 128 or 256 byte high single color players, and four 2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also available, as is a mode to XOR colors or blacken out colors when players overlap (good for making three colors out of two players!) Players and missiles have adjustable priority and collision detection.

Sound:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution, 8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4) can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only modes can be enabled for digitally sampled sound replay.
A fifth "voice" is produced by the internal speaker on Atari 400/800's (for keyclick and buzzer) and in the XL's and XE's this was (fortunately!) rerouted through the normal audio output, and the keyclick can be disabled.

Subject: 1.4) What is the internal layout of the 8-bit Atari?

The following text was written by Chris Crawford and appears in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM, ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

GTIA is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital

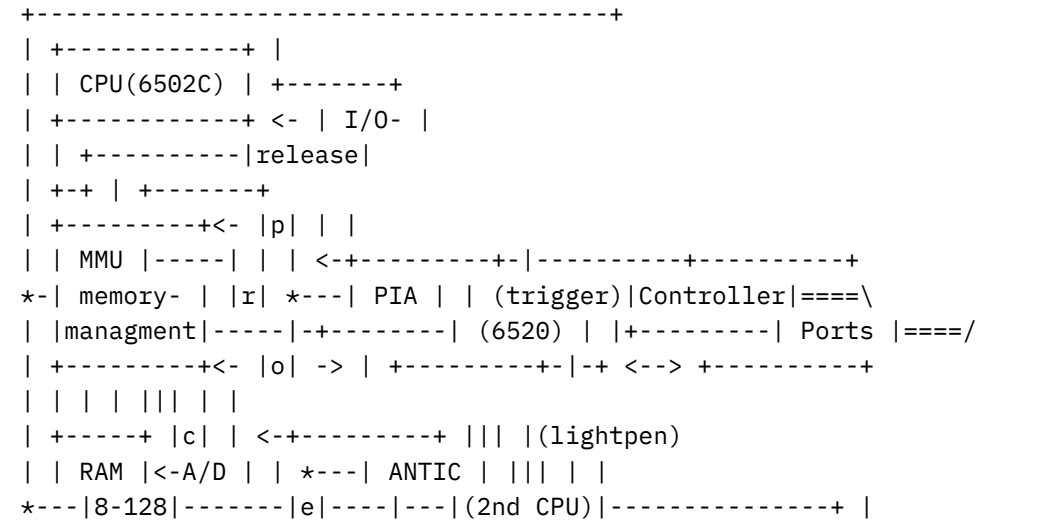
commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

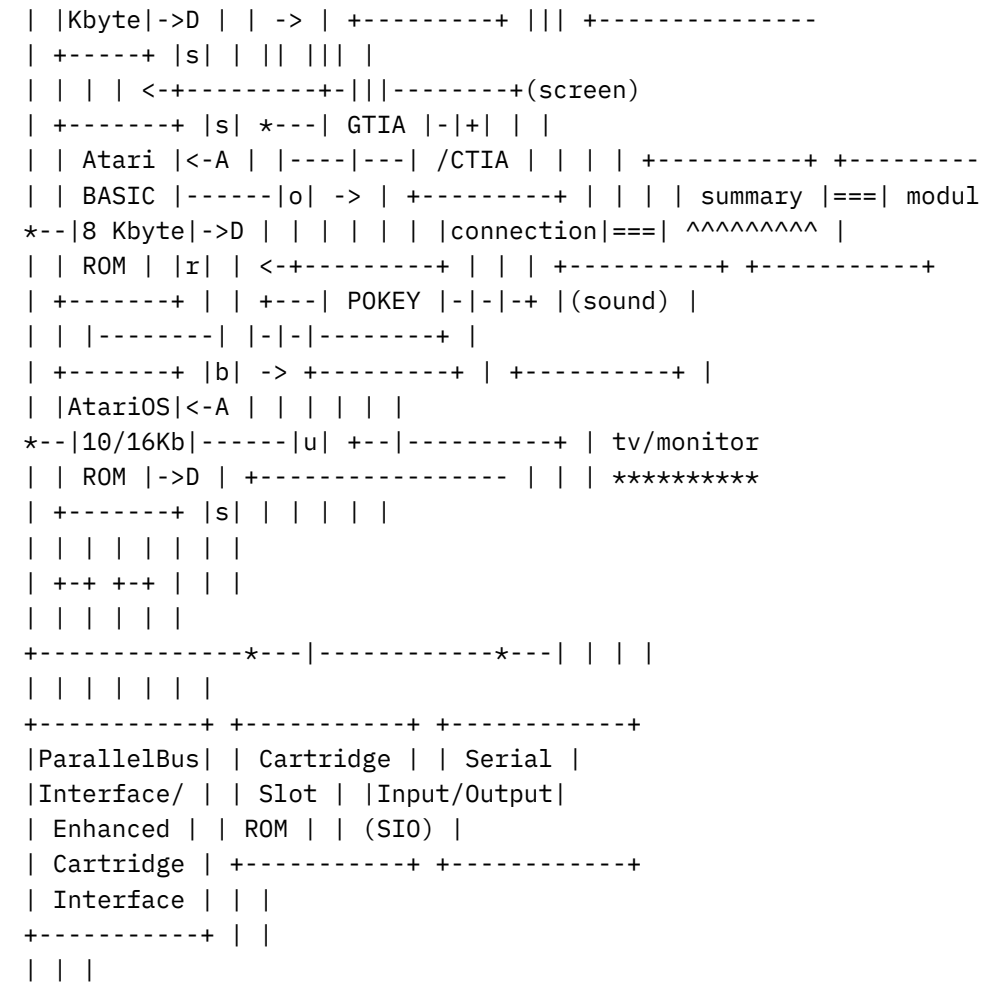
POKEY is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexer. According to mailto:sup8pdct@closer.brisnet.org.au (James Bradford), "Freddy is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. Freddy also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a freddy but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from freddy, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to freddy for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say freddy does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO freddy) and an extra 8 RAM chips."

Hardware Arrangement (With thanks to mailto:peter@soemtron.sb.sub.de (Peter))





- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800:8/16/48K, 1200XL/800XL/65XE/XEGS:64K, 600XL:16K, 130XE:128K
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE only

According to Doug Neubauer (by way of mailto:finneganj@delphi.com (James Finnegan), here is the team that originally designed the Atari 400/800:
<quote>

The A800 VLSI hardware guys include:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators (from the grass valley group)
Joe Decuir - Antic and system and creator
A french guy (whose name I forget) - Antic logic designer

George McLeod - CTIA and GTIA logic design
Doug Neubauer - Pokey logic design
Mark Shieu - Pokey chip design
Steve Stone - Pokey layout design
Steve Smith - Technician for antic and gtia
Delwin Pearson - Technician for Pokey

There were a number of other people whoses names I have forgotten.
I have lost touch with most of them.

<end quote>

Subject: 2.1) What is comp.sys.atari.8bit?

If you have Usenet newsgroup access you can access this discussion group through news:comp.sys.atari.8bit . This is an unmoderated newsgroup for discussion about the 8-bit Atari 400/800/XL/XE computing platform. All postings to comp.sys.atari.8bit automatically appear in the Info-Atari8 Digest and in INFO-A8.

comp.sys.atari was split into comp.sys.atari.8bit and comp.sys.atari.st in approximately 1986. To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

comp.sys.atari.8bit is archived by the INFO-A8 list server.

Subject: 2.2) What is comp.sys.atari.announce?

news:comp.sys.atari.announce is the moderated Usenet newsgroup for news items and announcements related to all Atari computing platforms. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari announcements. Moderated by Yat Siu from mailto:lexicor@world.std.com .

Subject: 2.3) What is comp.sys.atari.advocacy?

news:comp.sys.atari.advocacy is the unmoderated Usenet newsgroup for advocating for or against the various Atari computing platforms. If you enjoy making comparisons between Atari 8-bit and other computing platforms, this is the place to do it.

Subject: 2.4) What is comp.sys.atari.programmer?

news:comp.sys.atari.programmer is the unmoderated Usenet newsgroup for topics in programming on the various Atari computing platforms, including the Atari 8-bit.

Subject: 2.5) What is comp.emulators.misc?

news:comp.emulators.misc is the unmoderated Usenet newsgroup for the discussion of emulating computing platforms on other computing platforms. All emulator discussion that does not involve the Apple][, the Commodore 64, or the WINE MS-Windows emulator (which each have their own emulator groups) may be found on comp.emulators.misc.

Subject: 2.6) What is comp.emulators.announce?

news:comp.emulators.announce is the moderated Usenet newsgroup for news items about emulating one computing platform on another. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari emulator announcements. The moderator may be contacted at mailto:emulators-request@qualcomm.com .

Subject: 3.1) What is the Info-Atari8 Digest?

If you have Internet e-mail access you can access this discussion group through the Info-Atari8 Digest.

The Info-Atari8 Digest originates from

mailto:atari8@netcom.com

Subscription requests should be sent to the above address with the subject:

SUBSCRIBE | UNSUBSCRIBE (that is, one or the other)

The first line of the body of the letter should be the person's full name followed by his/her mailing address. For example:

Mike Todd snyder10@convex1.tcs.tulane.edu

To contribute to discussion threads in the Info-Atari8 Digest, or to start a new thread, send your posting to:

mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in INFO-A8.

Note that any posting sent to atari8@netcom.com will NOT be cross-posted to comp.sys.atari.8bit, so don't send your posting there. The Moderator hopes to correct this in the future.

The Info-Atari8 Digest is archived by the INFO-A8 listserver.

Recent copies are also kept at ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason Duerstock.

The Info-Atari8 Digest Moderator is Mike Todd,
mailto:snyder10@convex1.TCS.Tulane.EDU .

Subject: 3.2) What is INFO-A8?

If you have BITNET or Internet e-mail access you can access this
discussion group through INFO-A8.

The BITNET subscription commands are:
tell listserv at marist register <your real full name>
tell listserv at marist subscribe info-a8

The Internet subscription command is:
mailto:listerv@vm.marist.edu where the message says
subscribe info-a8 <your real full name>

To contribute to discussion threads in INFO-A8, send your posting to

mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in
the Info-Atari8 Digest.

Any postings sent to info-a8@vm.marist.edu or to INFO-A8@MARIST will not reach
comp.sys.atari.8bit, so don't send your postings there.

You may leave the list at any time by sending a "SIGNOFF INFO-A8" command
to LISTSERV@MARIST, or by sending a message to
mailto:listserv@vm.marist.edu that says "unsubscribe info-a8". Please
note that this command must NOT be sent to INFO-A8@MARIST or to
info-a8@vm.marist.edu.

---The archive of comp.sys.atari.8bit, the Info-Atari8 Digest, and INFO-A8---

You can obtain a list of the available archive files by sending an "INDEX
INFO-A8" command to LISTSERV@MARIST or by sending a message to
mailto:listserv@vm.marist.edu that says "index info-a8". These files can
then be retrieved by means of a "GET INFO-A8 filetype" command, or by
using the database search facilities of LISTSERV. Send an "INFO DATABASE"
command for more information on the latter.

Recent copies are also kept at
ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason
Duerstock.

The INFO-A8 Moderators are:
HARRY@MARIST (A Harry Williams)
mailto:ravi@mcnc.org (Ravi Subrahmanyan)
mailto:billw@score.stanford.edu (Bill Westfield)

INFO-A8 was created on December 9, 1986.

Subject: 3.3) How can I retrieve files from FTP sites by e-mail?

There are several general-purpose FTP mail-servers. These may be used to retrieve any files available from anonymous FTP sites on the Internet.

1) mailto:ftpmail@decwrl.dec.com with no subject line, and two-line body with line 1 help and line 2 quit

2) mailto:ftpmail@grasp.insa-lyon.fr (body: help) Please, European users only.

3) mailto:bitftp@pucc.princeton.edu (body: help or ftplist for a list of anonymous ftp sites)

Of the mail-servers listed here, I recommend this "BITFTP" server. To help you get started using it, try this example of retrieving files from the Umich Software Archives (through the barnone.citi.umich.edu mirror site). Send a message to bitftp@pucc.princeton.edu that says exactly:

```
ftp barnone.citi.umich.edu
user anonymous
cd atari/8bit
dir
cd Telecomm
dir
get ft80v037.txt
get icet.txt
binary
get ft80v037.arc
get icet.arc
quit
```

4) mail BITFTP@DEARN or to mailto:BITFTP@vm.gmd.de (body: help or ftplist for a list of anonymous ftp sites) (Europe only)

Subject: 3.4) How can I post to Usenet newsgroups by e-mail?

From the internet-services/access-via-email FAQ, maintained by "Doctor Bob" Rankin. (1995/08/28 edition)

Mail the text of your post to:

```
group.name-news@newsbase.cs.yale.edu
group.name@pubnews.demon.co.uk
group.name@dispatch.demon.co.uk
group.name@paris.ics.uci.edu
group.name@crs4gw.crs4.it
group.name@berlioz.crs4.it
group.name@magus.dgsys.com (unverified)
group.name.usenet@hkucs92.air.org (unverified)
```

For example, to post to comp.sys.atari.8bit, you might send your message to:

```
comp.sys.atari.8bit-news@newsbase.cs.yale.edu
```

Be sure to include an appropriate Subject: line, and include your real
name and e-mail address at the close of your note.

Subject: 3.5) How can I access the World Wide Web by e-mail?

Swiped from the WWW FAQ, which is maintained by mailto:boutell@netcom.com
(Thomas Boutell), here is how to access a web page by email:

mailto:server@mail.w3.org (preferred) or to
mailto:listserv@info.cern.ch (older address) containing
the following single line. (What you put on the subject line doesn't
matter; blank is OK. This line should go in the text of the message.)
You will receive as a reply a simple page intended to help you learn
more about the Web.

send http://www.earn.net/gnrt/www.html

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of
files for many computing platforms, including the Atari 8-bit computers. For
more information:

Jody Lenn, mailto:lenn@atari.archive.umich.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich
Archive. The Archivists request you use these mechanisms in this order of
preference:

1) The number one way to get into the UMich archives is via AFS. If you have
AFS, all our files are kept in the directory
"/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT!
Specifically, use:

file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software
Archives" choice. Specifically, use:

gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.edu/atari/8bi
t

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are
several mirror sites which are all updated from the home site regularly:
ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can
I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You
might also suggest what permanent 8bit subdirectory you'd like your file to
end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file, (please split it into parts of 60 K or less)
and mail the result to mailto:lenn@atari.archive.umich.edu (Jody Lenn). Please
name the parts in the subject line. This is really helpful as the parts

usually don't arrive in the proper sequence. Also, please include a message labeled "file transmission," containing a short description of the file, etc. Shar files are also acceptable, but uuencoded is preferred.

Subject: 4.2) What is the Boston Archive?

Here's an 8-bit Atari FTP site located at Boston University. It is maintained by Adam Bryant, mailto:adb@albert.bu.edu . This site seems to have seen no uploads for years, but there are some files here that aren't on any of the other sites. [IS THIS SITE LOST? - 10/13/95]

ftp://cs-ftp.bu.edu/PC/ATARI (128.197.13.20)

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by mailto:eyvind@stud.unit.no (Eyvind Bernhardsen). PVV stands for ProgramVareVerstedet, or The Software Workshop, a student society at the University of Trondheim, Norway.

ftp://ftp.pvv.unit.no/pub/atari/8bit/ (129.241.210.232)

Uploads go to /incoming/atari/8bit; Eyvind will move them to the appropriate directory. Please include a readme file with each upload, so people know what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

This smallish 8-bit Atari FTP site is maintained by Kevin Atkinson, mailto:kevina@clark.net .

ftp://ftp.clark.net/pub/atari (168.143.0.2)

Write to Kevin for uploading instructions.

A mirror of the ClarkNet Archive, kept by Jason Duerstock: ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari 8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the QACE Archive?

The Queensland Atari Computer Enthusiasts have a fairly large FTP site. It is
located in Australia and is the local internet sight of Super Products.
Contact James Bradford, mailto:sup8pdct@closer.brisnet.org.au for more
info.

ftp://203.4.149.98/8bit

Subject: 4.7) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only)
on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

The Cleveland Free-Net is the hub system of the NPTN, the National
Public Telecomputing Network. It can be accessed by any of the following:
telnet://freenet-in-a.cwru.edu, telnet://freenet-in-b.cwru.edu, or
telnet://freenet-in-c.cwru.edu (129.22.8.32 or 129.22.8.51).
Type "go atari" to reach the Atari SIG.

Those who add their names to the Atari SIG user directories are
automatically members of the official Atari user group C.A.I.N. - Central
Atari Information Network.

The Cleveland Free-Net Atari SIG publishes the CAIN Newsletter, maintains
the CAIN Home Page on the WWW, and keeps the "Who's Who in the Atari
Community E-Mail Directory" listing. Send correspondence and press
releases to mailto:xx004@cleveland.freenet.edu (Atari SIG).

Subject: 5.2) What is the National Capital Free-Net Atari Users SIG?

National Capital Free-Net (Ottawa, Canada)

Internet access to NCF is via

telnet://guest@freenet2.carleton.ca (134.117.1.39) type "go atari" at any menu
telnet://guest@freenet3.carleton.ca (134.117.1.22) type "go atari" at any menu
gopher://gopher.ncf.carleton.ca and choose:
'National Capital Freenet (NCF) Information by Gopher'
http://www.ncf.carleton.ca/freeport/sigs/computer/atari/menu/

This is the Atari computer(*) users special interest group.

Select the Bulletin Board for the latest Atari related news on the SIG
To get information on the other options select the menu option in question
and read the ABOUT message.

For more information, please contact Jack Kitowicz (ac382) on the
National Capital FreeNet. Comments & Suggestions for improvements to the
Atari SIG are always welcome.

Subject: 5.3) What is the Victoria Free-Net Atari Computer Users SIG?

Victoria Free-Net (Victoria, Canada)

telnet://guest@freenet.victoria.bc.ca (199.60.222.1)

type "go atari" at any menu

Facilitators: Gord Hooper (mailto:ua558@freenet.victoria.bc.ca)
Ted Skrecky (GCACE Librarian)
(mailto:ud264@freenet.victoria.bc.ca)

The aim of this SIG is to assist Atari Computer users. We can provide
assistance with XL/XEs, STs, and Falcons, whether you are a new or
experienced user.

Subject: 5.4) What is the Closer To Home BBS?

Kept by mailto:Dave.Blears@closer.brisnet.org.au (Dave Blears), this is a
BBS in Australia which supports the 8-bit Atari.

telnet://guest@closer.brisnet.org.au (203.4.149.97)

Subject: 5.5) How can I access the World Wide Web by Telnet?

This section swiped from the WWW FAQ, which is kept by
mailto:boutell@netcom.com (Thomas Boutell).

An up-to-date list of these is available on the Web as
http://info.cern.ch/hypertext/WWW/FAQ/Bootstrap.html and should be
regarded as an authoritative list.

telnet://telnet.w3.org
A telnettable browser provided by the W3 coalition.

telnet://www@www.cc.ukans.edu
Offers Lynx, a full screen browser which requires a vt100
terminal. Log in as www. Does not allow users to "go" to
arbitrary URLs, so GET YOUR OWN COPY of Lynx and install it on
your system if your administrator has not done so already. The
best plain-text browser, so move mountains if necessary to get
your own copy of Lynx!

telnet://www@www.njit.edu
(or telnet 128.235.163.2) Log in as www. A full-screen browser
in New Jersey Institute of Technology. USA.

telnet://www@www.huji.ac.il
A dual-language Hebrew/English database, with links to the rest
of the world. The line mode browser, plus extra features. Log
in as www. Hebrew University of Jerusalem, Israel.

telnet://sun.uakom.cs
Slovakia. Has a slow link, only use from nearby.

telnet://www@info.funet.fi
(or telnet 128.214.6.102). Log in as www. Offers several
browsers, including Lynx (goto option is disabled there also).

telnet://www@fserv.kfki.hu
Hungary. Has slow link, use from nearby. Login is as www.

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

8-bit Vendor/Developer home pages are listed in the Vendor/Developer list, not
here.

Atari 8-Bit Computers FAQ and Vendor/Developer Lists

==> #classic - Classic Games and Systems Collectors.

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if
they have gotten that far -- are familiar with IRC, :) and select one of
the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers
fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) Okay, how about a .dcm file?

A .dcm file is a format unique to the 8-bit Atari which is used to convert
entire disk images into files. To work with .dcm files on the Atari you'll
need:

Disk Communicator 3.2 by Bob Puff.
filenames: Archivers/dskcom32.arc or Archivers/diskcomm.arc (same thing!)

Subject: 9.4) What is an .xmo file?

.xmo stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

Subject: 9.5) What do I do with .XFD and .ATR files?

These are two standard formats for Atari disk images used by the various Atari
emulators running on other types of computers.

The .XFD format originated with the ST Xformer emulator;
the .ATR format originated with the SIO2PC utility.

Preston Crow keeps a small site filled with the latest utilities for
manipulating Atari disk images with non-Atari computers:

ftp://ftp.cs.dartmouth.edu/pub/crow/atari/

Subject: 10.1) What 8-bit Atari emulators exist for other computing
platforms?

These are the five emulators that are usable.

1) ST Xformer 3.0, from Branch Always Software, for the Atari ST.
http://www.halcyon.com/brasoft/

2) PC Xformer 3.5, from Branch Always Software, for MS-Windows.
http://www.halcyon.com/brasoft/

3) Rainbow, by Chris Liam, for the Macintosh
mailto:lamcw@aston.ac.uk
http://www.aston.ac.uk/~lamcw/emulators.html

4) Atari800 Emulator for Unix and Amiga, by David Firth
Latest version: 0.4.2
mailto:david@signus.demon.co.uk
ftp://ftp.demon.co.uk/pub/emulators/atari/ (158.152.1.44)

5) XL-It! 0.12, by Markus Gietzen, for MS-DOS
mailto:magi@stud.uni-sb.de
http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

BobTerm 1.22, shareware by Bob Puff
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No

Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: ?????

Ice-T 2.7 XE (128K) or 1.1 (48K) by IceSoft (Itay Chamiel)
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: XMODEM download
Autodial: Yes (2.7 XE) or No (1.1)
Backscroll buffer: Yes--8 screens (2.7 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.7 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation
available from mailto:brucka@eruvin.jct.ac.il

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,

]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad M.Kokoszkiewicz (KMK), mailto:conradus@plearn.edu.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format

disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:preston.f.crow@dartmouth.edu ,
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050
drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 12.4), can be
used to read/write to a hard drive connected to an MS-DOS system. This
can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the
companion vendor/developer list) allow the Atari XF551 disk drive to read
720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software
Services (see the companion vendor/developer list), allows both low
density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe
Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard
floppy drives to be used on the Atari. A utility is included to
read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on
each computer. The RS 232 ports need to be connected
together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be
connected. Just cross the transmit and receive lines
and join the grounds together. (Transmit is pin #2,
receive is pin #3 and ground is pin #7 on the 25-pin

port.)

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go from #1 on the right to #13 on the left on the 'long' side and from #14 to #25 from right to left on the 'short' side. #25 is closest to being under #13. A male connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus), then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C port.

```
13 1
o o o o o o o o o o o o o
o o o o o o o o o o o o o
25 14
```

(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock

8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed
but also pins 4 and 5 as well as 6 and 8. Or better
yet, make a true 25 wire, straight through cable and use
a commercial null modem. A commercial null modem is
just a small device with the correct lines already
crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 12.1) What 5.25" floppy disk drives are available?

SS SD/ED/DD standard /LEDs and such can format disks on a
stand alone basis

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,
chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps

- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2001
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary;
full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the
XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades
- Floppy Board
- Percom drive upgrades

==> Atari XF521
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Fast but still relatively slow I/O, kludge through joystick ports for 800. Rare

==> K-Products KPI Hard Disk Drive Interface (formerly from Supra)
Some limitations on drive type and size and total number of drives in sys.

==> Fine Tooned Engineering Multi I/O (formerly from ICD)
256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Computer Software Services Black Box
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface from Konrad M. Kokoszkiewicz and Jacek Zuk
- two IDE drives can be handled as well
- up to 8388607 logical sectors per drive
- up to 8388607 logical sectors per partition
(limited to 65535 by existing disk operating systems)
- up to 15 partitions simultaneously
(limited to 9 by existing disk operating systems)
- up 58 kilobytes per second in read or write operations
(limited to 32/7 in read/write operations by existing operating systems)
- native IDE mode for a future disk operating system
- emulation mode for existing DOSes like MyDOS, SpartaDOS, BWDOS.
- booting from any partition (even on machines with non-upgraded XL OS)
- write-protection feature
- executing non-DOS software from a hard drive partition
- the partitions may be created freely (there aren't fixed partitions)
The interface operates as normal PBI device and has a connector for 130XE
computers (and other, those have such connector). Tested with various
Western Digital, Seagate and JVC drives. Compatible with the MyDOS 4.50,
SpartaDOS 3.2g, SpartaDOS X 4.20, BWDOS 1.10 and a lots of DOS applications,
demos and games.

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

Subject: 12.4) How can I use an IBM-PC as a storage device for my Atari?

Original by Dave Paterson

SIO2PC is a cable and software combination that lets you use your PC as up to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to 16 megs. SIO2PC also lets you redirect the printer output to your PC printer or to a file on the PC. High speed drives are emulated (a la US Doubler).

All these functions are transparent at the Atari end; you never notice the difference between SIO2PC and regular drives, except that the SIO2PC drives are faster than any others (except Ramdisks and PBI interface drives).

SIO2PC 4.13 is shareware by Nick Kennedy.

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system. MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/ developer list); MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Personal Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Personal Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16K, BASIC, PBI, XL OS

800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missle Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.
820 Printer -40 col.
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige &
black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors
1025 80-Column Printer -7-pin dot matrix
1027 Letter-Quality Printer-80 col. letter quality =Mann-Tally Riteman LQ
1029 Printer -7-pin dot matrix, same as Commodore MPS-801
1030 Direct Connect Modem -300 baud, with ModemLink software
1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, with XE Term software
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package

Atari 8-bit vaporware computers: (note some are more vaporous than others)
1200 1200XL internally, many slight cosmetic differences
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier concept of the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1090 XL Expansion System-for PBI, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XTM201 -non-impact printer

XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have. I'm also not sure how much of this section is valid outside North America. If it's not valid where you are, I need to hear from you!

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

9 V AC 5.4 VA (600 mA) Atari#CO62195 transformer:
1030

9 V AC ???? VA (??? A) Atari#CO61516 transformer:
1010
9 V AC 15.3 VA (1.7 A) Atari#CO14319 transformer:
400,800,822,850,1010,1200XL
9 V AC 18 VA (2.0 A) Atari#CA014748 transformer:
400,800,810,822,850,1010,1200XL
9 V AC 18 VA (2.0 A) Atari#CA016804 transformer:
400,800,810,822,850,1010,1200XL
9 V AC 31 VA (3.4 A) Atari#CO17945 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551
9 V AC 50 VA (5.6 A) Atari#CA017964 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551

9.5 V AC 40 VA (4.2 A) Atari#CO61636 transformer:
1027

24 V AC 3.6 VA (150 mA) Atari#CA016751 transformer:
830

5 V DC 1.0 A (5.0 W) Atari#CO70042 adapter:
65XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CO61982 adapter:
600XL,800XL,65XE,130XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CA024814 adapter:
600XL,800XL,65XE,130XE,XE Games System
5 V DC ??? A (??? W) Atari#CO81982 adapter:
XL/XE

6 V DC 300 mA (1.8 W) Atari#??????? adapter:
"410P"

9 V DC 500 mA (4.5 W) Atari#CO16353 adapter:
XEP80,SX212,2600
9 V DC 500 mA (4.5 W) Atari#CA014034 adapter:
XEP80,SX212,2600

9.3 V DC 1.93 A (18 W) Atari#CO18187 adapter:
Indus GT,5200
11.5 V DC 1.95 A (22 W) Atari#CA019141 adapter:
Indus GT,5200

5 V / 12 V DC 1.1 A (5.5 W / 13.2 W) Atari#CO62297 adapter:
1400XL,1450XLD

These draw their power from the SIO +5 V:
XM301 (60 mA),XC12,ICD/FTe P:R:Connection

Draws power from the 600XL PBI:
1064

These have built-in power supplies (plug directly into the wall):
410,815,820,825,1025,1029,XMM801,XDM121

The power supply requirements for the following are still needed:
??? V DC ???? A (???? W) Atari#CA060535 adapter:
835

XC11 program recorder (no brick needed -> internal or SIO source?)

OTHER:
The ICD/FTe Multi I/O (MIO), all versions, can use both AC and DC supplies.
But stick to voltages of at least 6.2-7.2 V.

Subject: 13.5) What BBS software can be used on the Atari?

This section by mailto:winston@merk.com (Winston Smith)

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very

popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in Action! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and
comes with a "dial out" screen so that the Sysop can use the BBS as a
terminal program to call and fetch files without having to bring the BBS
down and reload a terminal program. OASIS supports "Door programs" which
it refers to as "OASIS PAL modules". This OASIS demo module comes with an
excellent message system. The OASIS file system is one of the most
complicated that I have ever seen. It consists of "file libraries" with
suites of "file types". There is quite a bit of overhead involved in
performing a download (which may be a good thing, as it discourages file
hogs). There is a commercial version of OASIS called "OASIS IV" that
performs networking. There was an OASIS network between Boston,
Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word
of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank
Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial
programs. I haven't heard anything about OASIS IV and CARINA for a while,
but PRO!-BBS is still a viable commercial enterprise last that I had heard.

Subject: 13.6) What version of Atari BASIC do I have?

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A
96 B
234 C

Subject: 13.7) What are the Standards for Used 8-Bit Stuff?

Developed by mailto:b.poehland@genie.geis.com (Ben Poehland)

When selling used 8-bit Atari equipment in the comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group, please consider describing the condition of the materials you are selling using these standards. This will go a long way toward preventing potentially highly-contentious misunderstandings. Usage is voluntary, but recommended.

LN (Like New)-- Item is pristine, unused, w/all manuals & original packaging materials.
EC (Excellent Condition)-- Item is little used, good working order, physically clean, may have a very few minor cosmetic blemishes, w/original manuals.
GC (Good Condition)-- Item is in good working order but slightly soiled, contains worn parts or minor scratches/dings that betray heavy service or old age, w/original manual or copied manuals.
FC (Fair Condition)-- Item in working order but missing manuals/accessories; heavily worn/soiled or cosmetically damaged.
BC (Basket Case)-- Item does not work, is damaged/butchered, missing manuals & accessories etc., but contains salvageable parts.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." The latest version may be obtained in the following locations, among many others:

ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev

> that it is NOT the BASIC revision used.

This is correct. It's a change in the OS, not the BASIC. You need an XL
or XE OS to be able to enter a GRAPHICS 15 command. 400s and 800s cannot
do it, even with a BASIC Rev. C cartridge.

You can access those graphics modes in other ways on 400/800 machines
(400/800 programmers used to refer to that mode as Graphics 7.5 and wrote
routines to let them use it) but not directly through BASIC as you can
with an XL or XE machine.

1781. MPP driver cable help

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-02 00:00:00 UTC
From: "Mr. Maddog" <mrmaddog@prolog.net>
Message-ID: <Pine.SOL.3.91.960902164511.26146G-100000@ns1.ptd.net>
Source record: 80794

Can someone tell me how to get a null modem cable to work with the MPP modem driver. It's the one where you can use a modem in a joystick port. I don't know if I can just 'plug' in a null modem cable without any modification. I really appriciate any help on this, thanx :)

I could be mistaken, but I don't think there is a difference between PAL
and NTSC for most 400/800/XL/XE cartridges.

1783. FOR SALE (Wash. DC area): Atari 8-bit hardware

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-02 00:00:00 UTC
From: jlohn@Glue.umd.edu
Message-ID: <50fa3a$128@step.eng.umd.edu>
Source record: 80796

I have a bunch of 8-bit hardware for sale.

The entire lot (below) is priced at $100. In other words, you
get 5 computers, 5 disk drives, etc. all for $100. This price
is negotiable.

The catch:
Everything must be picked-up sometime this week in suburban
Maryland (30 minutes from: Washington DC, No. Virginia, and
Baltimore).

Except as noted, all items work fine. I cannot sell items
individually.

Contact me via e-mail if interested.

1786. Atari stores in NYC?

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-03 00:00:00 UTC
From: Sapphire@innonyc.com
Message-ID: <50g71h$28v@kensie.dorsai.org>
Source record: 80799

Hi, anybody know of any stores (big or small) in the NYC area that still sells stuff for ATaris, like hardware and software (more specifically, teh SIO2PC cable)?

Thakns in advance.

1787. Found some reference stuff..

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-03 00:00:00 UTC
From: ericcron@wwa.com
Message-ID: <50g9rb$h87@kirin.wwa.com>
Source record: 80800

I ran across the following in a thrift store:

Atari 400/800 TECHNICAL REFERENCE NOTES

Includes:

Operating System User's Manual
Operating System Source Listing
and
Harware Manual

Published by Atari in 1982 - well over three hundred pages.

Machine Language for Beginners and The Second Book of Machine Language

Both books are COMPUTE! publications

Mapping the Atari

"A comprehensive source book and memory guide for beginning and veteran
programmers of the
Atari 400 and Atari 800 personal computers."
A COMPUTE! publication1983

Atari 400/800 Harware Manual

This baby even has fold out blueprints.Complete diagrams of the
motherboards,power
supplies,personality board,cpu board,8,16k dynamic ram, cartridge
board,audio and serial port

Published by Atari in 1983

Atari 850 Interface Module Operator's Manual.

Published by Atari in 1980

I got a couple more books, the 850 interface, the 810 drive with all of
the power supplies and I got it
all for a whopping $15. Anyway, I don't want to sell any of it but I
would be willing to make some copies for anybody that would like me
too.

Oh, I have a CX853 16k RAM memory module for anybody who wants it.
Just email me with
your address and I'll send it on its way.

Do you have anything that will emulate the Atari on the PC... like a faq
or something for info, or even software?

BTW, I came across a piece of software called "Synchromesh", which works
on my Indus, but have limited instructions (none) on how to use it. I used
an editor to look inside the file, and it activates via a command line
parm; "synchromesh on", using something like DOS-XL where you can enter
command lines, not menu items.

Also, in running Space Beagle, which I've yet to master, they mention the
Jupiter Mission. Did it have the same graphics?

From: gozar@kenton.com
Message-ID: <4nDLyMezGG9W090yn@kenton.com>
Source record: 80804

I've been working in the role of MIS Manager for a bank, but I now have
been (finally) hired as a music teacher. (My degree from college was a
Bachelor of Music in music education.) Anyway, I have a few questions. I
would like to use some of my 8-bits in my classroom, and here are
my concerns:

-Sounds, is it possible to hook headphones up to them cheaply? I'm
figuring I'm going to have to purchase some sort of amp for each one,
but I'm open for suggestions.

-Networking, is it possible daisy chain up to 5 computers through a
SIO2PC interface? I know I have to modify the cables so as not to
damage the SIO ports. I really can't afford to get a MUX setup, and I've
got a cheap 386 I can use.

Thanks!!!!

I'm a little confused by this answer. The Atari 400 didn't have BASIC built
it to it. The Basic Cartridge I bought was a Rev B and when I upgraded to
GTIA, everything that I tried (demos, etc). worked fine. I never had an
800, but I didn't think it had BASIC built into it either.

I'd really like to make some new software available to Pro sysops. Transferring netwwork packets though internet email could really save some $$. It cannot take the place of the Express Net, which is a automatic system. If you'd like to know about it, feel free to send me some email or call and I would be glad to discuss it. But I won't release it if interfers with your plans.

>Question for you..You have sent me files before in an Arced

I'm not sure about this one. But sometimes I find uue'd and hex encoded files on ftp servers. These are in a 7 bit text format. For those types of files I have software that runs on the 8bit that decodes them back into binary files. I have versions of encoders and decoders that run under both Pro and Term80.

>
>I am sure other Atari 8-bit users have a minor problem getting

From my 8bit, I usually use ftp email to receive files in email on my 8bit. I then use the appropriate decoder to extract the encoded file from out of the email message. Recently, the most popular lynx server, (pandapub.isca.iowa.edu), has had trouble with their downloading software configuration (sb), so I've had to rely on ftp mail. I feel the future of the 8bit is on the internet. That is, actually using it to access the internet.

It's not Basic, it's the new OS. The screen handler is responsible for
the display lists etc.

I guess back then the Atari machines had these expansion modules and junk
that would house new OS versions, faster disk access, etc.

Version 0.4 for Linux, MS-DOS, Power Macs, Unix and Windows

================================================================================
A Bradford W. Mott production in association with Aaron Giles,
Seunghee Lee, Jeff Miller and Keith Wilkins
================================================================================

Stella is a portable emulator of the old Atari 2600 video-game console
written in C++. It is a work-in-progress and should be consider BETA
level software. However, you can play most Atari 2600 games with this
release. There are five distributions:

* Binary distribution for Linux (stella-0.4-linux.tar.z)

* Binary distribution for MS-DOS (stella04.exe)

* Binary distribution for Power Macs (stella-0.4-mac.hqx)

* Binary distribution for Windows 95 & NT (stella-0.4-win32.exe)

* Source code distribution for Unix & MS-DOS (stella-0.4-src.tar.z)

There are two 2600 ROM images (.BIN files) included with each of these
distributions. One of them is a very simple test program, TEST.BIN, and
the other one, ELK.BIN, is a playable prototype of a game called "Elk Attack"
by Mark R. Hahn (see elk.doc for more information). BEYOND THESE TWO
FILES NONE OF THESE DISTRIBUTIONS CONTAIN ANY 2600 ROM IMAGES (.BIN FILES)
AND PLEASE DON'T WRITE ASKING FOR ROMS BECAUSE THEY'RE COPYRIGHTED!
If you own any of the Atari 2600 Action Packs by Activision you can use
the ROM images from it with Stella. There are several property files
(.VCS files) included with each distribution, however, you cannot play
a game with just a property file you must also have the corresponding
ROM image file.

New in this Version
===================

* About twice as fast as version 0.3 for most games
```

* Allows some games to be played with just a ROM image (.BIN file)

* New search method for ROM images (no more STELLA_PATH)

* Most visuals are supported for X windows

Supported Systems
=================

The following systems are currently supported:

* Linux (SVGALIB, X windows)

* MS-DOS

* Power Macs

* Unix (HP/UX, Solaris, SunOS, etc...)

* Windows 95 & NT

Distribution Site
=================

The Stella distributions can be obtained from the Stella home page at:

http://www4.ncsu.edu/~bwmott/www/2600

If for some reason you are unable to connect to this page please try again
later. Sometimes the AFS sever goes down and the HTTP server can't access
my home directory :-)

Acknowledgements
================

The following people have had a big part in bringing Stella version 0.4
to you:

Aaron Giles - Maintained the Power Macintosh version
Mark R. Hahn - Allowed "Elk Attack" to be included
Jeff Miller - Maintained the Windows version
Bradford Mott - Maintained the core code, Linux SVGA version and X version
Keith Wilkins - Maintained the MS-DOS version

> -Sounds, is it possible to hook headphones up to them cheaply? I'm
> figuring I'm going to have to purchase some sort of amp for each one,
> but I'm open for suggestions.

Get a couple sets of really cheap labtec speakers, etc, and just plug your
headphones into the 'left' speaker output. Bonus is you get sound
output if your using a monitor w/ no sound. You will have to
install a $1 mini phono plug in the computer, or just hack one
from a atari monitor cable.

Connect the atari audio out to the right and left, and ground to ground.

You could just wire it to the left input if you dont want the 'right'
speaker to come on.

> -Networking, is it possible daisy chain up to 5 computers through a
> SIO2PC interface? I know I have to modify the cables so as not to
> damage the SIO ports. I really can't afford to get a MUX setup, and I've
> got a cheap 386 I can use.

I don't see why you couldn't, but as with any device on the sio chain only
one computer/device can talk at once. You might need to take some
precautions with the 5/12v+ lines.

Future versions of APE might support multiple computers attached
to multiple serial ports.

Sorry, I am not aware of any stores in the NYC area dealing with the
Atari 8 bits. : (. However, I do know that nobody is commercially
manufacturing SIO2PC cables. With this in mind, I am offering my
services to make anyone who sends me $25 + $5 for shipping, your
choice of a sio2pc cable or an APE pro-system cable. (The latter
depends on if the chips I ordered will work reliably in the pro-system
cable). Cable features include:

db25 receptacle, mounted on box, eliminates 25 pin / 9 pin worries
1/2 sio cable, to connect to the Atari
MC1489P chip, socketed of course!
nice project box (Like the blue Radio Shack ones)
$25 price tag

Hey there, the Pro-system cable is the one you need to connect a PC
to a 1050, which is MUCH preferred to all the programs used to read an
Atari disk in a PC drive. You have a Pentium, so I am guessing you
don't even have a 5.25" drive, let alone the necessary 360k 5.25"
drive. To create disk images, even of protected disks, an impossible
feat for PC drives, the pro-system hard ware is what you need. I am
also offering pro-system cables for $25 provided the chips I ordered
work in the cable. The added benefit of this is that you can back up
all your software to your PC, before your disks go bad, and you only
need to move the 1050 across the house... <g>. FYI: .xfd and .atr
files are disk images. .xfd images were the first, and .atr's are
xfd's with a little header containing info about the disk. Another
image file type is the .pro, made by the APE pro-system. These contain
protected disk images. Binaries are the files you execute in dos,
once you get the files to your Atari.

Please post your XL's fritzy symptoms. Many people here can diagnose quickly what is wrong and how to fix it.

Good Luck!
Rick

1807. Newbie question concerning cartridges

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-04 00:00:00 UTC
From: rvanloo@cs.utwente.nl
Message-ID: <50js18$l0f@pandora.cs.utwente.nl>
Source record: 80671

Hi!

Since I'm new to the machine (the 600XL) I a question concerning the cartidge port and the cartridges it accepts:

The problem is that I want to get some game-cartridges for the 600XL, and buying new ones seems the way to go. My question is: Do games lately introduced for the re-introduced atari game-console run on the 600XL? This would make my search for games rather easy: just a visit
to the next-door store would suffice then.

Synchromesh was a long-awaited utility which put the Indus GT
drives into high speed transfer mode. It worked only with DOS XL. There
is also a Synchromesh II which supports the optional 64K RAM buffer in
the Indus. Nice utilities, but I was always disappointed that no one ever
modified them so they'd work with SpartaDos. It would seem like a logical
and simple thing to do. The SpartaDos X cartridge does recognize the
Indus drive and will put it into high-speed mode, but the disk based
versions of SpartaDos do not. Maybe the INDUS.SYS file in SpartaDos X
could be patched to work with the disk based versions. Hmmmmm.....

I think I can straighten this out...

The GTIA chip (in any model) adds GR. modes 9, 10, and 11.

GR. 15 is only available with XL or XE models. It is an OS enhancement.

Any version of BASIC can access any of these modes, given a model which
supports them.

Antic mode 14 is possible on any model, CTIA or GTIA, regardless of OS
version, with a custom display list.

No, 400s and 800s did not have built-in BASIC, though the cart version was
usually bundled. BTW, the BASIC cart will also work in the later models,
though there is no reason to do so.

Hello again all!
I have ordered all the components to make at least 25 APE cables. The
first cables should be sent by the end of the week. Pro- system
cables will also be available if the MC1489P is able to keep up with
the 14c89, which is made by a company my vendor doesn't stock :-(.
Both cables will be available for $25 + $5 shipping for US and Canada.
International requests will be handled on an individual basis. Only
US dollars accepted. I think that is it for now. E-mail me with your
questions/ requests, and I'll send get back to you ASAP.

On Fri, 30 Aug 1996 02:31:27 GMT, in comp.sys.atari.8bit I wrote:

Joe Blenkle (jblenkle@calweb.com) wrote:

: Does anyone know where I can get Atari Writer Plus and a printer
: driver for a Star NP-10 printer?

You have to create it. I believe there's a program on the disk that helps out with this, a keystroke you use as you boot up, or something on the menu. It's been quite a bit of time, and I don't have my manual with me. Anyone want me to send it up to Yogi's site? Yogi? Shall I post it in email to you, or upload it to the site?

It's working fine, as I tested it out earlier. Only problem is that it's on, if I'm thinking right, a MyDOS disk, but readable by anything. Weird, but I've not used it for a long while. I have a Star SG10X, and it's set up for that.

I also have a version of Spelunker with unlimited lives. I'm not sure how to get the guy to blast at the ghost, since it was usually with the spacebar. I ran it on the PC Xformer, it did well, but didn't run right. On the XL-It, it ran quite well, but the ghostblaster doesn't seem to want to work. I may not have done it right, but heck, I may have some things that Yogi may not. I counted awhile ago, and found I got at least 1,000 disks loaded to the gills with all sorts.

I have the following Atari Hardware and Software available as of
9-4-96

EQUIPMENT:

2- Atari joysticks

Antic Magazine Software Disks

BOOKS:
Advanced Programming Techniques for Atari by Linda Scheriber(orig
price $19.95)

Atari Programming with 55 programs by Linda Scheriber(orig price
$21.95)

32 Visicalc Worksheets by Ted Lewis (orig price $26.95)

Take any of the above books for $5 & SH or
Take all three books for $10 & SH

SOFTWARE:

Most include manual/instructions

1. THE NEWSROOM (5 disks with lots of clipart)
this is an excellent publisher $20 & SH

2. THE PRINT SHOP - a excellent bundle including:
The Print Shop
The Print Shop Companion
Three Graphic Disks
Holiday & Special Events Graphics Disk
No Frills Software Fonts & Borders 1

7 Total disks $20 + SH

3. TYPESETTER by Xlent Software $5 & SH

4. MAGNIPRINT by Alpha Systems $4 & SH

5. a 3 disk bundle by HI-TECH EXPRESSIONS include:
CardWare
AwardWare
AwardWare Graphics $8 & SH

EXCELLENT GAMES AVAILABLE:

1. KARATEKA by Broderbund
excellent Karate game $5

2. MICROLEAGUE BASEBALL(1984) $5

3. LEADER BOARD - Dual Pack
Excellent Golf Game includes
Double sided disk with the LEADERBOARD
on one side & Tournament on other $5

4. HACKER
a simulation games that forces a player to
hack their way into a system. This
game purposly comes with no instructions $4

Take ALL the above software in a disk case for $50 & SH

---

40 Blank 5 1/4 Disks $10 & SH
with disk case $13 & SH

Money order or personal check (with stuff being sent out when check
clears).

Buyer pays shipping.

Make offers including shipping.

Welcome to my first Classic System Auction!

This auction contains carts for the following systems:
Atari 2600 80
Atari 5200 5
Atari 7800 3
Atari 8-bit 2
C64 6
Intellivision 3
Hardware 4
2600 docs 6

Minimum bid = .50

Minimum bid increments
.50 - 5.00 .50
5.00 & up 1.00

Shipping is extra (generally $2 - $5, hardware may be more).

Trades are also welcome. I collect anything Atari. Trades may cause some
items to be removed from the auction.

Mail all bids and offers to krieg@execpc.com.

This auction will close September 20th, 1996, ending with a once, twice, sold
round.

Don't forget Basic XE. That was one excellent programming language. I used
it to rewrite parts of ForemXE when I ran it. Unfortunately, the disk now
has bad sectors in the wrong places. [sigh]

Archive-name: atari-8-bit/welcome
Posting-Frequency: 10 days
Last-modified: August 27, 1996

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the
Atari 8-bit family of computers. These include the 400, 800, 1200XL, 600XL,
800XL, 65XE, 130XE, and the XE Game System.

Users of comp.sys.atari.8bit actively maintain the following four Periodic
Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current
-------------------------------------------------------------------
This posting contains a list of Frequently Asked Questions (and their answers)
about Atari 8-bit computers.
Regularly posted to comp.sys.atari.8bit comp.answers and news.answers
ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/faq
http://www.cs.ruu.nl/wais/html/na-dir/atari-8-bit/faq.html
Or request from mailto:mcurrent@carleton.edu

Atari 8-Bit Computers: Vendors and Developers / Michael Current
---------------------------------------------------------------
This posting contains a comprehensive list of vendors, developers, publishers,
and repair shops for Atari 8-bit computers and their users.
Regularly posted to comp.sys.atari.8bit comp.answers and news.answers
ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev

1821. using ATRs with real Ataris

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-05 00:00:00 UTC
From: John Thornburgh <72337.2672@CompuServe.COM>
Message-ID: <50nd23$o8q$2@mhafc.production.compuserve.com>
Source record: 80684

Can someone help me with how to use ATR files on a real Atari?
I've surfed the Web for a couple of hours and can't find an
explanation, other than to use the PC as a hard disk with APE.

Is there a way to do it with just the Atari -- e.g., after
copying the file onto a floppy and putting it into an Atari
drive?

thank you! John

1822. FS: Atari 800 RAM and ROM boards

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-05 00:00:00 UTC
From: markd@pravda.cc.gatech.edu
Message-ID: <MARKD.96Sep5180637@pravda.cc.gatech.edu>
Source record: 80685

Anyone interested in the following?
- Atari 800 ROM
- (3) Atari 800 16K RAM boards
All work, but are bare boards only (no plastic covers)

I also have a working Atari 800, case is a bit discolored and
joystick port #1 doesn't work.

Mark

There once was a device called the TransKey by DataQue. I've not heard from Chuck (DataQue) for a long time and there was talk a while back that he nolonger supported the 8bit. In short, the TransKey was a 2X3 plug in board that allowed your xl or xe to support and IBM style keyboard. The cool part of the TransKey it supported a repeat buffer (F3) on the IBM and it gave you the function keys found on the 1200 and 14xx computers. I've one on an 800xl and really wish I'd gotten another before Chuck left!

1826. rs-232 adapter

1827. Keyboard modificiatoins?

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-06 00:00:00 UTC
From: Sapphire@innonyc.com
Message-ID: <50o644$vqb@kensie.dorsai.org>
Source record: 80690

How difficulat would it be to make an adapter that would allow a standard 101-key PC keyboard to be hooked up to a 130XE? Has anybody ever tried this?

I'm used to the clicky feel of my PC keybaord (mechanical switches) and prefer it to the mushy feel of the Atari keyboard (and also, the inverse video key on it doesn't work).

I seem to recall years ago some company sold a keyboard modification kit that like replaced the mushy rubber domes with springs or something like that and improved the feel of the keybaord (I think it was for the ST, I assume it uses the same type of keyboard mechanics), anybody remember it and if they still sell it?

1828. WARNING!! READ THIS IMMEDIATELY!!!!

To all the readers of these newsgroups... I apologize for the MULTIPLE posting, but it is being brought to my attention that the following is happening in these newsgroups:

Someone is FORGING my name and address to posts!! I am now receiving defamatory, slanderous, libelous, obscene, and harassing email!!!

THIS ADDRESS IS A BUSINESS ADDRESS!! ANYTHING that is sent to this address that is NOT REQUESTED BY ME, will be turned over for harassment to the Postmaster, Root, Sysadm, and any other relative person that these posts come to!!

Anyone who thinks the INTERNET is SECURE, needs to have a long talk with experienced people....

Anyone at the SMTP level can FORGE ADDRESSES and POSTS!!

Let's see, who at an SMTP level is DELIBERATELY OUT TO DESTROY ME???

I dunno, maybe:

Mike Shannon - Svector@svector.com, he is also the Postmaster and Root of his server...

WIlliam BJ Nash - bjnash@pdsig.com, he is the postmaster and root at his server.....

Or maybe even this clown:

-------- Begin forwarded message ----------rom: David Schlosser <webboy@rof.net>o: starfleet.software@juno.comubject: pussyate: Sun, 18 Aug 1996 08:01:06 -0600essage-ID: <v03007800ae3cd272e33c@[206.168.17.29]>
You can't be giving up this easily. What kind of con artist are you?
Didou enjoy the mailing lists?

Glenwood Post Onlinelenpost@rof.netttp://www.glenwoodpost.com
THERE IS NO REASON FOR ANYONE TO EVER SEND EMAIL TO ME!!!!

My mail is set up to receive mailings from the suppliers who send their notices on the NET!!!!!

If you want to ORDER, without writing anything out, then you CALL OUR BBS, 24 hours at (217) 423-7430, YOU LOG ON as a NEW USER, answer the questions, then you OPen the DOORS, choose ONLINE SHOPPING, and BROWSE

or SEARCH the OVER 40,000 ITEMS ONLINE and PLACE YOUR ORDER ONLINE!!! That way, we have a hardcopy of the order, so do you. The credit card charges are sent to the processor the same night they are received, the checks by phone are made the same day and sent to the bank, etc..

If you NEED MORE INFO, then you contact me either by Feedback, or read the descriptions in the catalog!!!

If you MUST SEND EMAIL, then send it, but if all you can do is CALL me NAMES from LIES posted to the newsgroups, etc., by BJ NASH, Mike Shannon, Ron Feigen, Kris Danner, Joey MArton, or anyone else that has NO BUSINESS CONNECTION to US whatsoever, except Mike Shannon and Joey MArton are competitors, and BJ NASH is a CON MAN, THIEF, then DO NOT SEND US ANYTHING!!!

There are TWO FEDERAL LAWS, they are as follows:

The ECPA, which makes it ILLEGAL to post false information which causes a business to lose income, or post for financial gain....

The TCPA,, which makes ANY Unsolicited Phone Call, Computer generated response, Fax, or other transmission over the phone line to a person who has not asked you to contact them, and you are TOLD DO NOT CONTACT ANYMORE, for every message you continue to send, it is an automatic, MINIMUM $15,000.00 FINE!!!!!

When you are TOLD to NOT CONTACT AGAIN, you are MANDATED under this LAW, to add said name, address, etc., to your DO NOT CONTACT list, and make it company/organization wide, and must be kept and maintained indefinitely!!!

I am not going to say this CRAP again!!!!

NO ONE HAS THE RIGHT TO USE MY NAME< MY BUSINESS NAME, OR ANYTHING ELSE without my EX:PRESS WRITTEN PERMISSION!! ANYTHING I TYPE< under Federal Copyright Law, belongs to the author, and the ownership of said text holds all rights to any derivative, collected, etc., works. Violation of said Copyright, which is as follows:

Quoting any of my messages without my express written permission, reprinting, modifying, or making a derivative work (by quoting, etc), is a violation of Copyright.

Recent Copyright Law regarding the INTERNET and any other electronic message system, BBS, makes the minimum fine $250,000.00 for violating Copyright...

For all the UNEDUCATED PEOPLE who have NEVER LEARNED ANYTHING IN SCHOOL, here is the COPYRIGHT LAW:

Any work made after January 1, 1976:

Copyright is SECURED UPON AUTHORSHIP and the first publication in any written, printed, mechanical, audio, or electronic form which can be

read, heard, etc., by another person.

Registration is NO LONGER needed to secure Copyright!

Notice of Copyright, or Publication, is NOT REQUIRED, MANDATED, or OTHERWISE needed to be affixed to the original work.

ONLY copyrights prior to January 1, 1976, MUST display a Copyright notice, be registered with the Copyright Office, etc..

For the RECORD:

My name is Terry Ortman. I served this country in the United States Air Force from July 1977 to MArch 1984!! I am an HONORABLY DISCHARGED AMERICAN VETERAN, with a Service connected Disability, and I have NEVER BEEN ARRESTED, CHARGED, or EVER CONVICTED IN ANY CRIME, nor have I ever had anything seized, etc., or charged with producing, distributing anything to do with Child Pornography!!

PICK up a COPY of MARQUIS WHO's WHO IN THE MIDWEST!!!! I AM LISTED IN THERE, with all my military service, medals, etc., and this information is easily obtained from RELIABLE GOVERNMENT SOURCES!!

ANYONE who continues to send me ANY EMAIL that calls me a THIEF, a CON MAN, a CHILD PORNOGRAPHER or anything else, will be reported to their Postmaster, Root, etc., and every step needed to track them down and prosecute them will be taken!!!!!

IT IS ILLEGAL to HARASS BY PHONE, or allow your equipment to be used to HARASS BY PHONE!!! The SERVER of the people posting this CRAP is allowing their equipment to be used to HARASS ME BY PHONE!!!!!

AGAIN, these LIARS will NOT SEND ME EMAIL, doing so will identify them to their server and get their access CUT!!

They will not call MY BBS, because CALLER ID will identify them, and they will be prosecuted!!!!!

It has been over 6 MONTHS since this CRAP STARTED!! To this DATE I have received NO COMPLAINT from any Better Business Bureau, Postal Inspector, Attorney General, etc.. Why? Because you have to provide them with PROOF OF the ORDER, PROOF of anything at all!!!!!!!

ONCE AGAIN, I do NOT HAVE INTERNET ACCESS!! I use INTERNET MAIL ONLY!!!!!

If anyone POSTS ANY DEFAMATORY SLANDEROUS< LIBELOUS MESSAGE AGAINST ME, this is NOT PROTECTED UNDER the First Amendment, and is a CRIMINAL OFFENSE!! Either send the message complete with headers to me, or Forward it to the Postmaster of the originating system, the root of the originating system, etc..

NONE of these so-called LIARS has ever sent me proof, contacted me, or anything else!!

Anything they post to a newsgroup is HEARSAY!!

MY ADS have my NAME, address, and BBS phone number!!!

Let's see how do I contact these people??? Do they provide you with their name address, phone number, etc., and how to contact them???

NO, because doing so will have the police breaking down their door to arrest them!!!!!

If I had INTERNET ACCESS do you think if I saw these LIES being posted I would NOT REPLY TO THEM?????

I HAVE NEVER POSTED ANY MESSAGE TO ANYWHERE saying that I have ripped somebody off!!

MIKE SHANNON, BJ NASH, etc., who own their own SMTP site and can FORGE addresses, ask anyone who's been bombarded with MAILING LIST SPAMS or your Postmaster how easy it is to FORGE EMAIL and any other Message on the Newsgroups, are the only ones posting these LIES!!!!

I am guessing they are fabricating all these posts of these so-called people that say they were ripped off by me...

BUT, I am not the ONLY person named Terry Ortman, I have personally seen shut down over 17 other places USING MY REGISTERED BUSINESS NAME!!!!

They are NOW forging EMAIL from me to other people.....

Look at the ABove example, how to identify FORGED MESSAGES!!

Return Address: Starfleet.Software@juno.com

But the originating message is from Serv1.rof.net????

LOOK at the HEADER on this POST, it is from JUNO, not rof.net!!!!!!

They can FORGE the ADDRESS but the originating system that sends the message also MARKS the message and identifies it with a unique number....

I ONLY POST ADS TO THE NEWSGROUPS!!! I will accept one message form an inquirer....

But NOT anything calling me names, or anything else!!!!!

ORDERING INSTRUCTIONS are in the ads!! You want o pay by credit card, you will CALL the BBS, so the software can verify the number is valid, get your electronic signature, etc., and the order is processed that very day!!!!

You REFUSE to call the BBS, then you MUST SEND the ORDER through the MAIL, if we do not have SIGNATURE, we will not process the order!!!!!

MY BBS and the Ordering door is SECURE!! The Internet is NOT SECURE!!!!!

THIS IS MY LAST PUBLIC POST about this harassment!! DO NOT SEND ME ANY MAIL unless you are a CUSTOMER or need MORE INFO ONLY!!!!!!

Gee, I wish I had Internet Access so I could personally reply to every post and call the poster all kinds of nice names....

But unlike these CON MEN, I have a LIFE, I own my own company, I WORK for a LIVING!!!!!

1829. Unix files to ATR and/or XFD

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-06 00:00:00 UTC
From: karaiw@uni-paderborn.de
Message-ID: <50opp1$pnt@news.uni-paderborn.de>
Source record: 80692

Hi

I am looking for a utility that can insert unix files in an .XFD,.ATR or .DCM
disk image file. I guess such a thing exists for MS-DOS so if anyone has
the source I would appreciate it if she/he can send them to me.

Thank you in advance

Stratos

PS. I came across unix2atr.c but it seems that the code is the same as
in atr2unix.c which is the opposite of what I want.

1830. WTB Action! and Action! Toolkit

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-06 00:00:00 UTC
From: alexc@3rdplanet.com
Message-ID: <alexc-0609960238200001@news.3rdplanet.com>
Source record: 80693

Hi everybody---I'm looking to buy an Action! cartridge with manual and the Action! Toolkit (or whatever it's called, I mean the supplementary disk with the standalone runtime libraries on it). I'd prefer the version with the looseleaf manual rather than the paperback, but I'm not picky... Let me know condition and your asking price.

Thanks,
Alex

Which Atari game console? If you are referring to the XE-GS, then yes. It is almost the same machine. The XE-gs is about equivalent to a 65XE. Carts, as long as they haven't been zapped are good regardless of whether they are new or used. There are loads for sale within this news group. They are also available from various vendors, such as B&C Computervisions (Ca) and Toad Computers (Md).

Actually, there is/was a device called Transkey that did just that.
I don't think it is still available NEW. You might fing some pre-owned
ones though.

Cross-posted to: rec.games.video.marketplace,rec.games.video.classic,rec.games.video.atari,comp.sys.atari.8bit,comp.sys.cbm

```
Welcome to my first Classic System Auction!

This auction contains carts for the following systems:
Atari 2600 80
Atari 5200 6
Atari 7800 3
Atari 8-bit 3
C64 6
Intellivision 3
Hardware 3
2600 docs 6

Minimum bid = .50

Minimum bid increments
.50 - 5.00 .50
5.00 & up 1.00

Shipping is extra (generally $2 - $5, hardware may be more).

Trades are also welcome. I collect anything Atari. Trades may cause some
items to be removed from the auction.

Mail all bids and offers to krieg@execpc.com.

This auction will close September 20th, 1996.

2600 - Atari
------------
C Adventure (text label)
U Air-Sea Battle
C Asteroids (sealed box, but box is a bit squished and worn)
U Backgammon (text label)
R Basic Programming (text label)
C Basketball (text label)
U Battlezone
C Berzerk
U Brain Games (text label)
U Canyon Bomber (text label)
U Casino
C Circus Atari (text label, w/ docs)
C Combat (text label, free w/ order to 1st person who asks)
C Combat (text label, w/ box and docs)
C Defender

KKK? hmph... just something I wouldn't do, I guess. No offense.

1837. 1489 SIO2PC Desgin Question

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-06 00:00:00 UTC
From: Michael Ellis <michael@anest4.anest.ufl.edu>
Message-ID: <3230562C.FE8@anest4.anest.ufl.edu>
Source record: 80700

I have been looking into building the 1489 SIO2PC cable as described by Rick Michael Cortese, and I have a question. The 1489 is an RS232 - TTL level RECEIVER whereas the 1488 is a TLL - RS232 line DRIVER. Considering that the SIO bus deals with TTL levels (0 - 5V), wouldn't we really want to use the line DRIVER (to convert the 8-bit's TTL signals to RS232)?

Using only my limited knowledge of actual electronic hardware (hey, I'm a a software guy - what can I say?) it seems that Rick's design, which accepts the SIO signals as inputs to the 1489, will convert signals that are already TTL (the Atari's) back to TTL (the output of the 1489).

I'd appreciate it if anyone could shed some light on this.

-Michael Ellis

1838. Indus GT (was Re: new archive files 9/1/96)

Does anyone have more information on these drives? I acquired one within
the past year and I would like to know more about it. I read somewhere
that the drive was even supposed to allow you to run CP/M with the 64K
upgrade ?!?

Any information would be appreciated, and if you could cc it to my
email address, it would be appreciated (this news feed seems flaky at best)

Thanks,
Kurt Mosiejczuk

I believe most will run on the 600XL, some will require 64K though. They
can work on a 800XL for example. If there is a way to upgrade your
machine to 64K, then do it.

Because thats what Terry Ortman does. He childishly rants and raves about how the world is out to get him; how everybody is slandering him; how everybody is stealing his name and business; how he is suing everybody.

The best thing you can do is ignore him. I've had to put up with him on the networks for years now.

> I take no side in this matter except to say that I do feel that a
> certain retailer's prices are a bit high on previously owned
> equipment. :)

You wouldn't believe what he thinks his stuff is worth. For about two years straight he was trying to sell a piece of Atari equipment for $250 that was worth about $50-$75 (based on what others were selling the same equipment for).

It doesn't. Ignore the guy.

: I take no side in this matter except to say that I do feel that a
: certain retailer's prices are a bit high on previously owned
: equipment. :)

They are. Toad has a 400 for half his $100 asking price. I saw a 400 go
for about $10 at the last MIST Atarifest in Indianapolis, and an
occasional 400 at a thrift shop for $5 including power supply. For what
he's got for sale, I can buy everything he's got there for about $100-150.
That's after taking into consideration all the prices I've seen of those
who are selling. Instead, he yells back at me saying the stuff was thrown
to him to be on consignment, and that his storage costs are around $1500.
Somewhere I think he's bullshitting us with something.

A good bullshitter can keep most of the real facts hidden for awhile.

Best Electronics had a kit that stiffened the keyboard of the 130 a bit, though not to the same extent as your clicky IBM-type keyboard. I installed it in mine, and it turned mush into something a little more tolerable (I was spoiled by the great feel of the original 800's keyboard, and my clone's Focus 2001!) The Transkey mod that someone mentioned would be a better choice for you, but I don't know who, if anyone, is still distributing it.

Anyone???

Gee, I sure wish I could believe this, but we all know you'll be back,
ranting and raving as you have done for several years now.

I guess that's why on the Atari-based Carina net (where you first got your
reputation) the author of the networked BBS program wrote a filter so the
SysOps could prevent your messages from even showing up in their message
bases. Too bad the News reader program I use doesn't have that feature.
I'll have to contact the authors...

Well, your understanding of the law isn't exactly great. I'd advise
you to take it up directly with the people you have a problem with, as
a lot of us on comp.sys.atari.8bit are more interested in the Atari
8-bits than your mail problems.

1850. Re: WARNING!! READ THIS IMMEDIATELY!!!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-06 00:00:00 UTC
From: Kenneth Rempfer <kennyr@pacbell.net>
Message-ID: <3230D074.3B31@pacbell.net>
Source record: 80713

I am relatively new to newsgroups, but I felt the following response
was in order.

What I have seen here in regards to the message I'm replying to has
really perplexed me.

What I have seen is that the said dealer claims that he is being wronged
and is an honest businessman. I have not seen a single posting by any-
one, let alone seen any postings from satisfied customers.

In counter, I have seen numerous postings in how he has failed to produce,
or failed to follow through with orders and has likewise responded in a
negative and actually illegal fashion.

Furthur, it is obvious that his prices are rediculous in nature; obvious
to anyone reading the other postings here.

Under these circumstances and in light of his posting (to which this is a
reply to) I have the following conclusion:

Said person needs to get a life and cease and desist this rediculous waste
of everyones time - no one in thier right mind is going to purchase from
him - so he shouldn't waste his time advertising here.

Furthermore - failure to produce and / or follow through with any type of
contract to purchase is very illegal as is advertising without intent to
follow through or with the intent to fraud.

Thank you for lending your ear.

Assuming that's true, the logical conclusion is that he's an idiot. Paying
$1500 storage on something with a market value about one-tenth of the
storage charges demonstrates extreme governmental fiscal tendencies; IOW,
terminal stupidity. Hell, he could /give/ it to any church in the country,
get a signed receipt, and write it off as a charitable donation (full
original retail - the IRS is clueless on the resale value of computers).

Hate to butt in.... but...
Are you talking about a disk copy or the cartridge?
Just wondering, since my cartridge BBSB works fine on the 130XE.

They are ALL getting rare now that Atari Corp is no longer in existence. Watch the Classics like Galaxian and Defender go way up in value in the coming years. I intend to keep my collection now. If you can get your hands on some of the originals like I have, you will be making a good investment for later.

Hello!

Last week I finally found my old Atari 65XE that I have been looking for. It is in perfect condition, standard 64k RAM. Power supply and an SIO cable. Manual is also in perfect condition. The original box is also there and in one piece (although the BOX does look old). If anyone is interested please e-mail me with a reasonable price.

Thanks allot.

1861. Omnicom baud speed and file transfer, HELP!

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-07 00:00:00 UTC
From: ericcron@wwa.com
Message-ID: <50r4re$jtm@kirin.wwa.com>
Source record: 80724

I have been trying to use Omnicom with my recently acquired 800xl,Percom,810,SX212. I can't change the baud to 1200. Everytime I try to change the "Parameters" I can't get past "Backround Color in hex?" The thing kinda seems to lock up. Also, I am having trouble downloading a file from a Unix server. I use the command:

get filename.com and the server says that it transfered it but I don't know how to tell the Atari to receive it.

Are most the files on the "Archives" for emulated or real Ataris?

Any help would be greatly appreciated.

Which one? As I recall, Atari used 2 different keyboards during tthe
production run of the Atari 800.......(I think one of them had totally
flat keytops, and the other had slightly concave keytops. I had the
800 with the concave keytops....the feel was better than the 130's but
nowhere near the feel of a Focus keyboard.)

>and my clone's Focus 2001!) The Transkey mod that someone mentioned would
>be a better choice for you, but I don't know who, if anyone, is still
>distributing it.

What I ended up doing was taking apart an old Epson electronic
typewriter I no longer used and using the rubber domes from that in
the 130XE keyboard, but I had to trim some rubber off the domes cos
the Epson ones were a little taller than the ATari ones. The feel is
much better....the Epson domes offer stiff resistace at first, but
when you push it down to a certain point, it collapses down (like a
Keytronic PC keyboard) and makes the connection.

But my inverse video key on the 130xe doesn't work.....does anybody
know where I can get a replacement mylar sheet for it (I'd prefer to
buy that separately if possible insteda of getting an entirely new
keyboard)?

Welcome to my first Classic System Auction!

This auction contains carts for the following systems:
Atari 2600 80
Atari 5200 6
Atari 7800 3
Atari 8-bit 3
C64 6
Intellivision 3
Hardware 3
2600 docs 6

Minimum bid = .50

Minimum bid increments
.50 - 5.00 .50
5.00 & up 1.00

Shipping is extra (generally $2 - $5, hardware may be more).

Trades are also welcome. I collect anything Atari. Trades may cause some
items to be removed from the auction.

Mail all bids and offers to krieg@execpc.com.

This auction will close September 20th, 1996.

2600 - Atari
------------

If you are using ftp on a shell account, the "get" command transfers a
file to your directory on the Unix server. You have to download it to
your computer using Xmodem (sx filename) or Kermit. I haven't tried
Kermit between Omnicom and a Unix server, but I think you would type
"server" at the C-Kermit> prompt, then go to the Omnicom File-Xfer menu
and press (R)eceive.

>Are most the files on the "Archives" for emulated or real Ataris?
>
Most of the files at umich.edu are for real Ataris. Other archives may be
mostly for emulators.

This particular message is getting spaghetti-like, but for my portion
of it, I was talking about the disk version from Yogi's FTP site. If
your cartridge works good on your 130XE, you're very lucky. Because
of the way the cartridge hangs from the back of the computer, BBSB
has a tendency to lock up a 130XE. I originally bought BBSB for about
$50 when it was released, but at the time all I had was a 130XE. I
would play it for about 2-3 levels and it would lock up or go
berserk. I returned it several times but eventually gave up and got
my money back.

By the way, the disk version works on my 1200XL too. Weird.

Try killfiling him. Kill files are Good Things which allow you to not see articles generated by certain people or articles in a thread with a certain name. If you've seen someone use the term "plonk" before, that's the sound of someone being killfiled. If you have a good killfile, it's possible to filter out a large percentage of spams, 1-900 ads, and MMF schemes, as well as people who make lots of noise.

Hello,

I was wondering what my options were for adding a hard drive to my Atari 800XL. I am newbie with the Atari scene so I could use some assistance in deciding what to do. Where can I get a good interface and how much will it cost. I have inherited a 105 MB IDE drive and am considering using it.

Thanks,

Brian

>keyboard)?

If it's only that one key, I'd look at the traces to that one contact carefully. If any of the metallic paint looks worn, go to an electronics supply outfit, get a bottle of Nickel Print, shake it very well, and paint over the suspect trace with a fine brush. Let it dry thoroughly, and then reassemble the keyboard. Best Electronics still sells the mylars, but there are at least two different types. Check with them before ordering.

I agree that the the 800's keyboard is somewhat short of the Focus, but compared to a 130XE, it's heaven. I know that some 1200XL owners will start a response thread to this, but just remember that keyboard feel is a matter of individual preference.

> PS. I came across unix2atr.c but it seems that the code is the same as
> in atr2unix.c which is the opposite of what I want.

unix2atr.c is a separate program, but the site you looked at may be
messed up. Unfortunately, there are some bugs in the program (well,
unimplemented details, really): The free sector bitmap isn't created,
and the boot sectors aren't generated.

So if you create a disk image with unix2atr, you'll need to create a
blank formatted disk image and copy everything over, or at least be
very careful not to write to the disk image.

You can find the latest source for unix2atr at:

http://www.cs.dartmouth.edu/~crow/atari/

I probably won't do any more work on the program other than manage
updates provided by others.

Is he *STILL* quoting that damned $1500 fee? I would have thought by now he would have upped it after a bit of time. Guess not. Where in heck does he even get that price? If I'm figuring right, someone would be paying around $3,000 for stuff that's worth about 5% of that. He's gone on before about consignment and so on. Once I even got helpful and suggested some places to sell them, like hamfests, fleamarkets, and that sort of thing. Then he goes right off on me.

Tell me, what must one do to be charged with the conversion crime?

I'd like to see what he says on this. This 'several years ago' thing kinda corresponds to a little math I did... He said some time ago his storage fees were $25 a month. Divide that by $1500. You get 60. 5 years.

So, that means he wants us to pay him for the storage fees, plus his asking prices for the A8 hardware. My real question is if most of that stuff still works, after going through all those temperature changes through the seasons and years. I also have some A8 stuff that still works, even after years of being used, like most of us.

If the guy wants his stuff back from Ortman, then one of two things will happen. Ortman will put up such a fuss about storage fees and so on, that he'll have to pay O them. Or, O will just hand it to him. Personally, from all the messages I've seen, O will fuss, and *FUSS* he will!

In all, I don't think he even has them with him, much less has had them on consignment or anything. Ortman, if you're reading this, prove it to us. Don't rant and rave. *PROOOVE IT!*

1879. Pokey Version 0.61 released! Now with new Sound Support!

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-08 00:00:00 UTC
From: mhill@one.net
Message-ID: <32327b97.8117480@news.one.net>
Source record: 80742
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

Everyone,

Pokey version 0.61 has been released and is up on my web page below.

Whats been added since version 0.60?

More games run. Ripoff (Analog Magazine) now runs!

Better 5200 joystick support.

And the main feature that was just added was Sound support when using the Pokey printer port sound card. This is a card you can build for about $18-$25 US dollars (or less) that puts the Pokey sound chip used in your Atari 800 on a small cicuit board with a few other chips. It bascially gives you 100 percent accurate sound emulation of a real Atari 8-bit.

It has some major pluses. Some of the obvious being that the sound is dead nuts on the original. The emulation is very easy to code, there is very little CPU overhead involved. You can plug the output of the Pokey card right into your Sound Cards Line in.

The Pokey web page contains the latest version of the Pokey emulator and an archive with a schematic for the Pokey printer card, part listings, test program, and programming documentation for other emulator authors to include in their emulators. I have been in touch with other 8-bit Atari emulator authors and almost all seem very interested in supporting the pokey sound card.

I also have plans to possibly build an internal PC card version that wont waste your printer slot and will work better with a slower PC. If you are electronics shy, or would rather have a PC card version, drop me an email letting me know, and how much you would be willing to pay for a real etched (no wires) PC board version. If there is enough support I will have some made and send out tested Pokey sound cards. I plan on releasing info for this version to developers also.

So grab the latest copy of Pokey off my page (its free and will always be free!). While your there check out the Pokey Sound Card stuff two. Download those schematics and build yourself a card! Im having a ball playing Mule and Archon with actual Atari sound!

Source record: 80743

Help Required ?
Can anyone help with my project to interface a PC sound blaster card to my 8 bit.
At the moment I can use via a midi interface the Midi Blaster sound unit, this gives
me true 16 bit Stereo replay of all my midi samples through my external amplifier.
But the system is expensive, interface cost £40 and the midi blaster cost £130.
If the equipment can be reduced to a more reasonable cost may be we can all
get better quality sound from our 8 bit machines.
(1). Has anyone tried to produce a interface to use a PC sound card.
(2). Can it be done, are all the signal available.
(3). If it can be done, how about software. If sound blaster can be controlled via
the SIO line can existing Midi Software be used to address the card.
(4). Can you access wave table modules ?
The range of applications is great, imagine some of our great 8 bit games with enhanced
16 bit stereo sound.

So come on 8 bitters let me have your comments and any technical help with regards
to signal lines PC or 8 bit. In fact any information would help with the development of
this
project.

Regards
Derek Fern

> thank you! John

I was having the exact same problem.. There is no DIRECT way to use ATR on a real 8-bit, however, there is now a Windows 95 program (IMAGIC '95) that allows you to convert between ATR<->DCM<->XFD<->SCP and it works great! Just drag an ATR over to a DCM and its useable on the real comp... I know, I wish that extra step wasnt involved (especially on another platform!) But its the only way that I know of right now..

(R. Goodwin asks how to prosecute for 'conversion'.)
I'm sorry, 'conversion' is a tort, I guess, not a crime. It is
The recourse against it is to hire a lawyer and sue. Or, like
I did once, take the case to small claims court, if the amount
is below, like $1000, all you have to do is file the complaint
in the Small Claims Court in the jurisdiction where the offense
took place or the defendant's place of business or residence.
Conversion is misuse of your property. I like thinking of it
as like when somebody basically gets something of yours 'by
trick'. If Mr. O. has verbally agreed to sell the person's
400 and other stuff, but hasn't sold it for years and
won't return it, that is conversion.
(I won my Small Claim. I haven't figured out how to get the
papers and take them to the sheriff's offffice and get the
sheriff to collect for me, so all I have is:
1. I put the loss on my income tax.
2. I know this person has a court judgement against him.
Sooner or later it will show up in his credit records
and other records where people can be forewarned before
dealing with him.

1886. ATARI Equipment, MUST SELL!!!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-08 00:00:00 UTC
From: Terry Ortman <starfleet1@juno.com>
Message-ID: <19960908.210413.5071.3.starfleet1@juno.com>
Source record: 80749

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $100.00 or best offer. These SELL AT Video 61 for $49.95 used.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them. Again, these sell, each $49.95 at Video 61, you're getting 2 for the price of one.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00. These sell at Video 61 for $74.95, same price.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package. These are not currently available anywhere else that I know of.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for $59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual, Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

ATARI RELATED MAGAZINES, Found this unopened box that I had boxed up for a person, but then he never sent the order in:

ATARI EXPLORER, February 1985, Cover Price $3.00
ATARI EXPLORER, April/May 1985, Cover Price $3.00
ATARI EXPLORER, Summer 1995, Cover Price $3.00, $3.95 Canadian
ATARI EXPLORER, Winter 1986, Cover Price $3/$3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Sept/Oct 1986, Cover Price $2.95 $3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Nov/Dec 1986, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Spring 1987, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Summer 1986, Cover Price $2.95 $3.95 In Canada

The Above Magazines are in good/fair confition. They are from the same collection the above 1027, 1050, are from, the previous owner suffered a stroke and asked me to dispose of these for him, as he has moved, and I am asking FAIR MARKET VALUE, as can be seen from the prices sent to me by Video 61, who seem to use the Internet and stocks and sells Atari equipment, Video 61 may send me an offer on these then, as I need the cash.

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE BADLY someone has to have one, or a trak double-sided slave drive. MAKE OFFERS!!

1887. Krieg's Klassic Karts Auction Update #3

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-08 00:00:00 UTC
From: krieg@earth.execpc.com
Message-ID: <51048b$4tn@earth.alpha.net>

```
Welcome to my first Classic System Auction!

This auction contains carts for the following systems:
Atari 2600 80
Atari 5200 6
Atari 7800 3
Atari 8-bit 3
C64 6
Intellivision 3
Hardware 4
2600 docs 6

Minimum bid = .50

Minimum bid increments
.50 - 5.00 .50
5.00 & up 1.00

Shipping is extra (generally $2 - $5, hardware may be more).

Trades are also welcome. I collect anything Atari. Trades may cause some
items to be removed from the auction.

Mail all bids and offers to krieg@execpc.com.

This auction will close September 20th, 1996.

2600 - Atari
------------

1888. Info on old game (Rescue on Fractalus) wanted

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-08 00:00:00 UTC
From: pepper@dashi.dell.com
Message-ID: <5106ko$sri@dashi.dell.com>

Cross-posted to: comp.sys.ibm.pc.games.action,comp.sys.atari.8bit,rec.games.video.atari

Hello,

I am looking for info where I could buy a copy of the old game for the
Atari computers called Rescue on Fractalus. Specifically I want the manual so
I can use the models in it to construct a 3d model of the plane in the game.
If someone has these and can scan in the pictures of the plane and email them
to me I would be most appreciative.

Thanks in advance,

Ron.

Yep. The track zero sencer has stopped working.
Easy to fix, but a little more diffacult to line up again.
you could try to replace the led or the light sencitve transistor
indvudally like i have done or just replace the whole bit.

... Documentation - The worst part of programming.

ATARI POSTREMUS

Well everyone, it's official.

Atari Corporation is no more. It has ceased to exist as a legal corporate entity.

On Thursday, August 1, 1996, Atari Corporation was de-listed from the American Stock Exchange. It was replaced by a new issue, JTS Corporation. JTS bought out Atari last February. JTS is an OEM supplier of disk drives to the computer industry. The new stock ended its first day of trading at $5.56 per share.

Atari Corporation's last official day of trading was Wednesday, July 31, 1996. The common stock closed unchanged on the American Exchange at a value of $5.19 per share.

From its founding in 1972 by entrepreneur Nolan Bushnell to its end in 1996 under the reign of Jack Tramiel, Atari lasted 24 years. Rather a youthful age as people go. But truly ancient in the fast-moving world of desktop computing. It had a good run.

Requiem aeternam dona Atari.

It's certainly a sad day in computing history -- especially those of us who grew up with Atari from its conception. I still remember the very first time I put my hands on a computer in 1980, on an Atari 400. That one incident has made me the computer junkie I am today. Even though I eventually switched platforms full-time in 1991, I never forgot my roots. :^/

Well, it doesn't exist under the name "Atari" anyway. Remember that
the Atari ownership now owns the majority of the new JTS.

James R. Gilbert (cb541@cleveland.Freenet.Edu) wrote:

: I'm sorry, 'conversion' is a tort, I guess, not a crime. It is

I've heard reports of people being arrested for this, but I don't have sources about arrests and court cases of this. We need a lawyer in the house, that is, a resident lawyer. However, I do know someone on my ISP who is one, but I don't remember his username. [sigh]

: The recourse against it is to hire a lawyer and sue. Or, like
: I did once, take the case to small claims court, if the amount
: is below, like $1000, all you have to do is file the complaint
: in the Small Claims Court in the jurisdiction where the offense
: took place or the defendant's place of business or residence.

From what I've heard, you can do it in your own city/town. Sometimes the hard part is the proof, unless you got some reliable witnesses.

: Conversion is misuse of your property. I like thinking of it
: as like when somebody basically gets something of yours 'by
: trick'. If Mr. O. has verbally agreed to sell the person's
: 400 and other stuff, but hasn't sold it for years and
: won't return it, that is conversion.

Now, here's a possible conversion tort/crime going on. I say possible, as I'm not sure *YET*. Mr. O has yet to sell the stuff to anyone, because of the overpricedness of what he's selling. Judging from the recent message he's posted, and seeing that the person he is selling it for had a stroke, well, I'm not sure what to think at the moment. Did the person give it to him? Did O buy it from him? Is he taking advantage of the person's disabled physical state?

If the original owner asks for it back, and he refuses to give it back, citing storage fees and so on, then the original owner has a most excellent case against O.

Again, I want to hear from a lawyer about this.

: 2. I know this person has a court judgement against him.
: Sooner or later it will show up in his credit records
: and other records where people can be forewarned before
: dealing with him.

Does O have any court judgements against him at all, that can be used against him in this case? I need to hear from these people.

1897. ATR8000 & Lots of Stuff $125 CDN

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-09 00:00:00 UTC
From: ryang@computerhelp.ca
Message-ID: <19960909023839449869@mutl-d18.bctel.net>
Source record: 80758

I have the following Package for Sale:

- ATR8000 Interface for Atari 8-Bits
- Tandon Dual-Drive Double-Sided-Double Density Drive Mech for ATR8000
- Percom SSDD Floppy Drive (works independant of ATR8000 on SIO)
- Caseless 5.25" DSDD Floppy Drive, works as extra drive for ATR8000 or Percom
- About 50 Disks with Case of disks for ATR8000 and CP/M
- Manuals for ATR8000, and a few Binders and Books about CP/M

It works great with SpartaDOS and MyDos! You can even use a 720K or 1.44 meg PC drive and get 720K Disks on the 8-bit! (I'll throw in all cables i hacked together to make that work!)

I am looking for $125 Canadian for this (Hey, if your in the states that means its a bunch cheaper! ;-)

Send me a message if your interested!! (send a copy via email, just in case)

Ryan.

Get some PC board repair paint instead, if the mylar itself isn't damaged.
This is paint with a very high metallic silver content; it can be used to
repair PC boards, including the mylar sheet in your keyboard, rear-window
defroster grids in your car, and numerous other flat-surface-conductor
uses. Any decent electronics supply hosue should have it; a 1 or 2 ounce
bottle will last for years (unless you just can't stand the thought of
letting it sit on the shelf <G>).

(B. Poehland requiem's Atari. (Something like that)).
I remember Batteries Included. Made 'Paper Clip', and a bunch
of other top notch software for Ataris. They 'sold' to another
company. That 'company' simply put all Batteries Included
assets in the bank (their pockets). Sold all rights to the
software. Simply stripped Batteries Included of all it's assets
and dumped it.
I Mr. Shugart and Mr. Tandon do something like this, they would
put Atari 15 million or so in their bank (pocket), give the
Tramiels about 3 or 4 million for their services. Then
comes the neat part. They will dump Atari patents and
rights to somebody, probably relativly(sp) cheap. That
could be fun. Maybe some Deutsch company will purchase these
rights and we'll see some future to Atari's innovations.
Just conjecture. But I was really appalled at what happened
to Batteries Included and am never ceasing to be amazed what
corporations do. Like take retirement funds, stick them in
their pocket, go bankrupt and tell the retirees 'uh oh
your retirement is gone. Tough cookies'. Or here in Ohio
Blue Cross/Blue Shield 'took a vote' and sold to Columbia.
The executives of BC/BS get huge (whaddaya call 'em besides
payoffs?) bonuses for their brilliance. That vote.
I have BC/BS insurance and I never saw a ballot in my
mailbox.

The last time i looked inside my MPP modem the ribbon cable that plugs in the joystick port used most of the ports pins. I would think that that would try to transfer the data in nybbles (1/2 byte at a time) since its available. If this is the case then using the MPP modem driver simply won't work since the true serial data is a bit at a time. You would still have to use a level converter like the 1489 or the Max232 since the signals from the joystick ports are still TTL.

1) Build the SIO2PC, connect its rs232 side to a null modem adapter (or swap TX and RX yourself at the RS232 side). and plug into the second system with a telcom program and use Bobterm at the Atari end...

2) Get a serial adapter like the Rverter or the PR: connection or the 850 interface, or the MIO and connect via a null modem...

3) find a Happy drive and format a 180k 5 1/4 disk and tranfer using the 7.1 revision IBM transfer software (this is probabally valid only for text files sind I have never tried other files...)

A number of the newer XEGS carts (Food Fight for example) require 64K to
run and the 600XL only has 16K. Some of these will not run. Food fight
wont run on a 48K 800 at all...

Hi Ben, Long time no hear. Is "Atari" really dead? One could say it died when Nolan Bushnell left. Or when it was transmorfed by Warner and was 500 million in the hole. Or when the Tramiels carved it to the bone and expected it to again take the world by storm by becoming a computer only company or then a game only company. It also could have been back when the offices in Sunnyvale were vacated. JTS still hold the rights to the Atari name, and its still an uncertainty if they intend to do something with it. I think that more time will have to go by before saying that the loss of the Atari name from the stock market is the definitive end. Atari was more than its corporate walls and its name. Atari is also the users who cherish the ideas formed. Those that continue to build and develop keep the spark alive. So what if the Atari name no longer stands in Sunnyvale or on the stock market. It will finally die when the last of the

diehards stop meeting at user groups, and the memory of what was, is no longer.

FWIW, I have no problems with it here (Win95, P100 CPU, 32 megs RAM, 10 Mbps Ethernet w/o modem). Got both version 0.14 and 0.15 from there.

> > another platform!) But its the only way that I know of right now..
>
> Does the documentation mention anywhere what the different formats are?

Hi Maury, do you mean does it mention the layout of each type of format,
or just what they are for? The former I don't think it does, but the
latter is fairly common knowledge:

ATR: Disk Image used by APE and Most Atari Emulators
DCM: Disk Communicator 3, a Disk Image Making tool that Runs on the
8-Bit, this is the preferred format for a Disk Image if your
actually going to use it on a Real 8-Bit
XFD Disk Image used by the Original ST X-Former Emulator, and possibly
the PC-Xformer (Not sure)
SCP SCOPY Disk Image for SpartaDOS's Disk Image Tool.

Hope this helps!

Misc Stuff for Sale

How it works: Every item is $5 OR three for $10, plus s/h.
Any known problems are listed. Items will be sold to the
first person to reply. I try to check my email daily; I'll
let you know whether the items you want are still available ASAP.

Hardware

Atari 850 x2 (need repairs). Incl p/s, manual and 2 SIO cables.
CX-85 keypad. No manual. Driver disk included.
ICD P:R: Connection. Manual, printer cable incl. R1: flaky; R2: works
fine.
Accex 9600 external modem. Incl manual, 850/PRC cable.

Books

Atari DOS 3. Complete manual set with Master Disk.
Atari SX212 manual.
Awesome Games for your Atari Computer.
Advanced Programming Techniques for your Atari.
Compute's 1st book of Atari Graphics.
101 Programming surprises for your Atari Computer.

Software

All are originals and include manuals. On disk.

Epyx: Summer Games
Synapse: Blue Max
Synapse: Shamus: Case II
Batteries Included: PaperClip (with dongle)
Level 9: Silicon Dreams
Atari: Silent Butler
ScreenPlay: Dunzhin: Warriors of RAS (with cassette)
SSI: Wargame Construction Set

1909. Krieg's Klassic Karts Auction Update #4 (5 new carts)

Newsgroup: comp.sys.atari.8bit

```
Welcome to my first Classic System Auction!

*****************************************************************
* 5 rare carts added Sept. 9th! *
* 2600: Ghostbusters, Fire Fighter, No Escape, California Games *
* 7800: Galaga *
*****************************************************************

This auction contains carts for the following systems:
Atari 2600 84
Atari 5200 6
Atari 7800 4
Atari 8-bit 3
C64 6
Intellivision 3
Hardware 4
2600 docs 6

Minimum bid = .50

Minimum bid increments
.50 - 5.00 .50
5.00 & up 1.00

Shipping is extra (generally $2 - $5, hardware may be more).

Trades are also welcome. I collect anything Atari. Trades may cause some
items to be removed from the auction.

Mail all bids and offers to krieg@execpc.com.

This auction will close September 20th, 1996.

2600 - Atari
------------
C Adventure (text label)
U Air-Sea Battle
C Asteroids (sealed box, but box is a bit squished and worn)

[Article crossposted from comp.sys.atari.st]
[Author was Eric Handbury]
[Posted on 27 Aug 1996 01:56:53 GMT]

Unusual request. My wife is deaf and in the evening we find it difficult to go over the day's happenings. To both of us it becomes very frustrating. I had the idea that if I could get hold of a system that would allow me to link up printed conversation to the television I could use a light keyboard and converse by typing onto the screen so that my wife could read my part of the conversation. Recently I got hold of an 11 year old Atari 130XE which gives me connection to the TV and has a light keyboard. It has, as you will know, built-in BASIC. I can print conversation onto the screen which is fairly readable at least 8 feet from the screen. I would like, however, to increase the font size a little but have no idea if this is possible or if I could get hold of an old word processing program for the cartridge slot or a program recorder with this information that would allow a bigger
font size. There may be games available of an educational character that might give me access to a larger font. I hope I have described my efforts to develop a much needed conversation device using an Atari 130XE. I would much appreciate any input you might have.

Yes. this is true. BTW, memory upgrades for the 600XL are
available. On the XE carts and the 800. There were memory allocation
changes from the 800 to the 800XL and later the XE series. Some games
were writtem specifically using these changes and will not run on the
800 even if there was enough RAM. However, Most 800 carts should run on
the XL and XE series computers. If they don't it is sometimes possible
to use the 800 translator (OS). Of course this works best with the disk
versions. Most carts won't let you load from disk first.

That's an easy one. In BASIC, type the following:
10 DIM TEXT$(80)
20 GR.18
30 ?#6;CHR$(125):I.TEXT$

```
40 ?#6;TEXT$
50 TEXT$="" G.30
```

Now type RUN and you're off to communicating. This will give you characters on the screen that are twice as wide (20 characters/line) and twice as high (12 lines/screen max). For each line to appear on the screen you must enter the entire line then press enter. Ther is a better way, where each character appears as you type, but were getting complex now. If you want the enhanced version, I can build it and e-mail it to you.
I don't have my chart with me at the moment, so I hope I got the clrae screen character number on line 30 (?#6;chr$(125)) correct. It's been a while since I used the value. I can't enter the character with this mail editor and it would look different from the Atari character anyway. I hope this helps.

Yeah but did they really? Commodore was selling Amiga's until the end,
ST's were basically passed over even by their creators as the desperately
searched for the "next big toy" whether that be the colour handheld or the
Jag.

As the resident deaf poster (or am I?) on this newsgroup, there's other things you can do rather than type to each other which is quite slow. However, by now, someone's posted a reply, using one of the graphics modes on the various 8bits.

Can she lipread and/or sign? That would do real good. I have a selection on my homepage that has links to sign language, as I use it all the time.

If you go to ftp://ftp.cnam.fr, or gopher to gopher.archive.umich.edu, you will find some good word processors, and many others, to name a few. You may wish to go into my homepage, as well as the homepages of others to see what they have to offer in terms of software.

>10 DIM TEXT$(80)
>20 GR.18
>30 ?#6;CHR$(125):I.TEXT$
>40 ?#6;TEXT$
>50 TEXT$="" G.30

Sorry but your method has several flaws in it. In +16 graphics modes an
input command will reset the screen to Graphics 0, and there's no colon
before "Goto 30", which a non-programmer wouldn't catch, especially with
"goto" abbreviated. But on the lighter side the abbreviations are valid
and the clear-screen code is right.

I tried writing one on the fly in here, but testing it I realized it
didn't work. Finally, I came upon this version.

10 DIM T$(80)
15 GRAPHICS 2
20 PRINT #6;T$
30 INPUT T$
40 GOTO 15

I tested this one and it does work. For a cute effect, add this line:

25 POKE 756,226
```

I used Netscape 2.02 to write this page (I mean to check how it
looks....). But I had this problem with other pages, as well.
I think you should update to a 3.x Netscape. For me this
solved those problems.
I haven't used any special things on my page that could cause
this crash.
It's just another Netscape bug...

Bye,
Markus

Since I registered ST Xformer, lo, these many years ago, I've gotten exactly two response from Mr. Mihocka. Well, actually, one was a response, in email, rather sarcastic and somewhat off-center regarding the topic (I had posted a comment in c.s.a.s. about not being able to get support - he never answered any of my letters or feedback left at his Web page). The other bit of email received was, of all things, an advertisement.

Why in the world would anyone who has as much as told me he doesn't want my business and doesn't appreciate my commenting on his products email me an ad? I've been publishing hardware and software reviews since 1978, it's not like it's a secret...

Ah, well. With /real/ 8-bits as cheap as they are now, who cares? I'll build another shelf under my server desk...

This looks to me to be the shortest and best so far.

The only thing I don't like is using "RETURN" as the
key that you clear the screen with. Since you don't have
word wrap, you might WANT to hit RETURN to start a word
on the next line.

Why not use some other (unlikely) character to clear
the screen? Almost any unusual character would do; perhaps
">" or some such? Or some control character, of course.

I don't have any manuals, etc., here with me now, but I
think just changing line 40 to
40 IF A=62 THEN PUT#6,125
would change it to test for ">". Others might suggest
better alternatives.

p.s.: Okay, Robert Ely, you got rid of the strings
everybody was using for PRINT#6 by using PUT#6.
So how'd you miss PUT#6,125 instead of ?#6 CHR$(125).

p.s.s.: Just teasing a little. Nice to know I haven't lost
ALL of what I remembered once upon a time.

I believe that the PBI info is ALSO available in the
Atari Technical Manual, 800XL "updated" version, if
you can find it.

john, ape and sio2pc are both very capable of connecting the pc to the
atari. im biased towards ape, it offers many more features. just set
it up, load an .atr image into the virtual drive bay, turn on atari...
voila.

i dont own a diskdrive for my xl :)

Cross-posted to: rec.games.video.marketplace,rec.games.video.atari,rec.games.video.classic,comp.sys.atari.8bit,comp.sys.cbm,alt.atari.2600,alt.atari.2600.vcs,alt.atari.2600vcs

```
Welcome to my first Classic System Auction!

*********************************************************************
* 5 rare carts added Sept. 9th! *
* 2600: Ghostbusters, Fire Fighter, No Escape, California Games *
* 7800: Galaga *
*********************************************************************

This auction contains carts for the following systems:
Atari 2600 84
Atari 5200 6
Atari 7800 4
Atari 8-bit 3
C64 6
Intellivision 3
Hardware 4
2600 docs 6

Minimum bid = .50

Minimum bid increments
.50 - 5.00 .50
5.00 & up 1.00

Shipping is extra (generally $2 - $5, hardware may be more).

Trades are also welcome. I collect anything Atari. Trades may cause some
items to be removed from the auction.

Mail all bids and offers to krieg@execpc.com.

This auction will close September 20th, 1996.

2600 - Atari

It's seems that the Prevue channel (I don't know how popular it is
across the US) on my local cable company is running on an Amiga. I live
in a small town, so when my lights go out, that means the cable
companies power went out, so when the power comes back on, I change it
to the Prevue channel, and watch the Amiga boot up. (It's kinda cool,
actually, in a sick and geekish way!!)

Source record: 80644

(I'm a bit confused as usual. Mr. Hanbury, from Mr. Bell's
account asks a question about printing big letters using
130xe. Mr. Smith answers with a section of code. I see
problems with Mr. Smith's code, but am encouraged by his
code to say something mydamnself.)
Mr. Smith Dimmed a string to 80 bytes, but didn't have
any input that used this string. I think his code will
just keep clearing the screen, has no place for keyboard
input. Mr. Smith uses graphics 18, which is graphics 2
big letters, without the 'text' area at the bottom of
the screen.)
How about this (I'm hoping someone will correct my
mistakes and thru it all, Mr. Hanbury will get the
idea and write something successful.)

```
10 CLOSE #1
20 OPEN #1,4,0,"K:":REM OPEN THE KEYBOARD FOR INPUT
30 GRAPHICS 18:REM OR GRAPHICS 17 FOR A BIT SMALLER LETTERS
40 GET #1,X
50 ? #6;A$;:REM I FORGOT LINE 2 DIM A$(5)
60 GOTO 40
```

It might work better to close #1:close #2
open #1,4,0,"K:":open #2,8,0,"E:"
(I can't edit this, so I forgot the line,

```
42 a$=chr$(x)
```

Lemme try again

```
10 DIM A$(5)
20 CLOSE #1
30 OPEN #1,4,0,"K:"
40 GRAPHICS 17
50 GET #1,X
60 A$=CHR$(X)
70 ? #6;A$;
80 GOTO 50
```

> > any modification. I really appriciate any help on this, thanx :)
> >

I published the pinouts for this in my user group's newsletter many, many years ago. Unfortunately, I gave all my old A.C.E.C. newsletters to Wayne Arenz. You can try to reach him -- his e-mail address is: rwarenz@freenet.columbus.oh.us

The null cable was employed by users transfering data between the Atari ST and Atari 8-bit, without an 850 interface (primarily to transfer text files when they upgraded to the ST series). The cable works well, save for two drawbacks: (1.) The maximum baud rate is rather low, maybe 600 or 1200 baud. It definitely is below 1200 baud and (2.) There is no support for carrier detection or controlling the DTR pin (so you can't hang up or tell if you are connected). That is a non-issue if you intend to use it for a null modem. Finally, most of the MPP drivers were memory hogs.. They worked using a bunch of interrupts, I forget if they were DLI or VBI, probably VBI. Obviously, all buffering of incoming data had to be performed by the software (since there is no DRAM in the cable), which is probably one reason it couldn't handle higher baud rates. At least with an 850 or P:R:, you had a small buffer in the interface (16 or 32 bytes as I recall).

I definitely recommend the methods in the previous posting, but thought I'd pass this information along anyway.

1942. Pokey Version 0.62 just released

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-11 00:00:00 UTC
From: mhill@one.net
Message-ID: <323627c6.11519420@news.one.net>
Source record: 80646
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

All,

I just released version 0.62 of Pokey the Atari 800/XL/5200 Emulator.

Whats new in version 0.62

Limited Keyboard emulation of the Joystick.

Faster emulation. Some games that were a little slow should run
better now.

And just in case you missed last weekends announcment. Pokey supports
sound (as of version 0.61) through the Pokey printer port card.
Specifications, parts lists, and test programs for the project are up
on my Web page listed below.

You can also get the latest version of Pokey from my Web Page below.

You will find screen shots of pokey running various games also. Im
looking at adding some samples of the Pokey card playing some of our
favorites.

If you want to know more about Pokey drop me a line.

Mike

Is Zork I,II,or III availabe for download anywhere? Is there any BBS software available for downlaod anywhere? I have checked the archives and unless I am blind, I can't find it.

Check this out.

While browsing at a local thrift store I came across a color monitor for my Atari for 6 bucks! Got a green one too, both work GREEEAT! I also cam a cross an Atari 800. I open the cover and what do I see? Not the 16+16+16 I expected to see. I saw a 16 plus a RAMPOWER 128 plus a RAMPOWER 32 by Axlon. (Plus Performance Series.) How much did I get that one for you ask?

$4.50. What a deal. I guess I should consider myself lucky.

Intact? Bushnell sold it to Time Warner. Around '82-'84 when the Commie, Apple and Atari were working on 16 bit machines (Commie and Apple in house, Atari with Amiga to whom many of the 8 bit programmers transferred) Tramiel took over Atari. Brought over the Commie 16 bit design team (commodore sued atari for stealing their 16 bit machine). Commodore paid off the loan made by atari to amiga (for exclusive rights) to take over the amiga (after all, having brought the commie design team to atari, could amiga expect atari to market the amiga?). Atari sued commodore for stealing *their* machine. Suits settled... atari got the ST and Commodore the Amiga.

If you think of Atari as just the tramiel company with the tramiel philosophy (dropping the US markets, selling off 8 bit products with no support rather than continuing the development with outside partners of perhaps the first GUI for an 8 bit computer, demonstrated by 'VIP Professional' programmers, I believe, along with the Lotus clone for the XE), then, yes... that atari lasted. But the Atari who designed and made my computer (800XL which said on the box that it was the official home computer of the olympics... the 1984 olympics) that surely did not stay intact.

Are you sure about all of this? I know the later part about the Amiga originally being an Atari external project, but not the former. It seems Atari lost that one, the Amiga was certainly superior to my ST.

Well put. The 8-bits were certainly the best of the 8-bit machines ever built, not in any one way, but when you look at the whole thing. I'd love to have the SID of the C64 or the slots of the Apple II, but all in all the right parts were in the right places and you ended up with a superior machine. My compliments to Jay Miner. On the other hand my ST was a junker.

Maury

1946. pokey emulation info

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-11 00:00:00 UTC
From: ce596@torfree.net
Message-ID: <DxK9J2.8B.0.queen@torfree.net>
Source record: 80650

I have been considering the problem of pokey emulation on a pc, I see
there are a number of people working on this problem also. I was
able to work out how the pokey sound works by studying the schematic
diagram in the hardware manual and doing some experiments with the
Atari. I wrote a program to test what i had learned about the sound by
generating it through the pc speaker, and the sounds seemed the same.
What i got to work were pure tones,the poly counters and high pass filter.
If anyone needs this information i will help if i can.

>
>Eric Handbury (mariner1@freenet.npiec.on.ca)
>
>
Let me re-reply. The previous reply had a couple of minor mistakes in the program. I scripted it on the fly. Line 20 should read:
20 GR.2:C.1
Line 50 should read:

```
50 I.TEXT$:G.30
```
This will leave the text on the screen until you press return. The one from yesterday would imediately clear the screen without it even appearing.

Another short version puts each character on the screen until a return is entered. At that time the screen is cleared.

```
10 GR.2:C.1
20 OPEN#1,4,0,"K:"
30 GET#1,A:PUT#6,A
40 IF A=155 THEN ?#6,CHR$(125)
50 G.30
```

This is a definite improvement over the previous program. Word wrap could also be added, but would require saving to disk and loading each time you wanted to use the program. These short ones can be quickly typed in and no drive is necessary.

I'd say Tramiel deserved it, but Jobs was a special case. It was basically
political with he disgreeing with whats-his-name. I was sorry to see him
turfed, ya gotta have respect for a number-cruncher-made-good.

On the other hand my ST was a >junker.

I disagree about the ST being a junker. You have to look at it in the context of 1985, when the ST and the Amiga were fresh off the drawing board and just hitting the market. The Amiga had better graphics and sound. It was basically Jay Miner's next generation design, so that's what you would expect of it. The ST, by comparison, was pretty much a matter of bolting together available parts while avoiding too much custom ASIC design, and it was apparently done in an incredibly short time, something like 6 months from concept to product.

But the ST offered most of the Amiga's capability at a *much* lower price. I remember how an Amiga 1000 with 256K of RAM cost quite a bit more than $1000 when it came out, while the 520ST (with 512K) was solidly below $1000 (I think $699, but I'm not sure). Later on, the 1040ST offered 1 MB of RAM for $1000. In that era, the Atari hardware was an incredible deal, and it attracted a lot of buyers who couldn't afford the $1000+ 16-bit machines.

The small memory was really a problem for the Amiga. Both the Amiga and ST were intended to have a ROM OS, but were initially released with disk-loaded operating systems because bug-free ROMs weren't ready, or whatever the excuse was. Loading the OS into either computer used around 200K of RAM (both were slated to have 192K of ROM). The 520ST was left with plenty of RAM for programs, but the Amiga had very, very little. Not many people saw the benefits of multitasking with 60K of free memory.

And the Amiga's OS was, of course, notoriously buggy in those early years. Rather a lot of users saw Guru Meditations much more than they'd have liked. :-) Also, having seen the early Amiga GUI, I'd have to say that the only possible explanation is that somebody hit it and its designers with the Ugly Stick repeatedly. These two things certainly couldn't have made a good impression in the stores. I know that during my Atari ST fanatic years, when Amiga was evil, I always laughed when I saw a local cable channel displaying a Guru Meditation -- Amigas got used a lot for video titling because of the NTSC compatible video output, but they were not exactly stable enough to just go away and leave for 24+ hours. :-)

So I'd say that at first, the ST was anything but a junker, compared to its prime competition and enemy. The Amiga was technically better but a number of flaws brought it down, and it could not compete in price. Later on, the ST definitely did become a junker, because the Tramiels were seemingly even less willing to seriously fund development of new hardware than the Commodore execs.

Cough, ahem... does the name Nolan Bushnell ring any bells? His parting
from
Atari Corp. was also somewhat less than voluntary.

BTW, technically JTS didn't buy out Atari. Atari bought "into" JTS. But
the JTS
CEOs are in charge so they might actually stand a snowball's chance of
succeeding.

1951. HOW TO LOAD AN ATARI 8-BIT PROGRAM?

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-11 00:00:00 UTC
From: clockwrk@ix.netcom.com
Message-ID: <516gjp$d6q@sjx-ixn6.ix.netcom.com>
Source record: 80655

Hopefully this is an easy question. I used to use Atari 800s many years ago, but even the simplest of commands have been long lost in memory.

I am running PC XFORMER (the Atari 8 bit emulator). I have put MULE.EXE and MULE.COM in the same directory as the emulator files. From the READY prompt, I have tried typing LOAD "MULE.EXE" (and I did the same with MULE.COM) and I get "error 130" or something like that. So my question is, how do I load this program? Does this emulator really work or is it a waste of time? I read several different FAQs on this, none of which seem to contain basic OS commands. One of the FAQs suggested that the READY prompt indicates that BASIC is running, and that I need to exit to DOS, using SHIFT-F10. When I press SHFT-F10, I get a letter "L" on the screen. When I type "DOS", I get a screen with diagnostic stuff like memory test, which tells me to press SELECT, START, or RESET etc etc. I don't even know which keys correspond to SELECT, START etc.

Please help if you can. If possible, please forward a copy of your response via e-mail.

Thanks!

>
>I'd appreciate it if anyone could shed some light on this.

Bearing in mind that I have not, and probably wouldn't, built or used
this circuit, but did offer some advice when it was first proposed.

The design is basically only using the 1489 device as a set of four
inverters, bearing in mind that the inputs are designed to work
properly with both the plus and minus voltages of the RS-232 design
spec.So what this design basically does is buffer and invert the open
collector TTL signals of the Atari SIO bus to drive the RS-232 inputs
of the PC, and line receive and buffer and invert the bi-polarity
voltages of the RS-232 outputs of the PC, giving a TTL level signal
which is isolated for the open collector SIO bus with the diode.
in terms of design specs and compromises, this is certainly perfectly
adequate going from an output on the PC to the SIO bus if the diode is
chosen to have a low forward voltage drop (since the SIO bus only
really expects to see a saturated transistor collector, and here you
have a series combination of a transistor collector and the diode)
such as a Schottky or Germanium diode. It is a little more marginal
the other direction, going from the SIO output to the RS-232 inputs,
being unable to generate a negative voltage level which the RS-232
spec calls for (specifically, a receiving device can meet the spec if
it's threshold is -1.49 volts), relying on the real world reality that
most receivers are based on the 1489 type devices, and have a
windows centered at of either +.9 volts or +1.2 volts or so (the
difference between the 1489 and the 1489A being the hysterisus, and
hence the thresholds). On the plus side, it will only put out +5
volts, which should be ok. So there will be less noise immunity than with
a true RS-232 spec signal, but normally would work just fine,
especially at the relatively slow SIO bus speeds.

I believe he had another design as well, using a CMOS inverting gate package. Same basic principle, but replacing the bipolar transistor saturation limits with the CMOS transistor resistance limits (a output looking basically something like a 300 ohm resistor to ground or B+). A little less noise immunity, and less drive capability on the SIO bus side.

Bottom line is, it works in most environments with reasonable cable lengths without many problems reported. I have had some PCs that required more than the +5v maximum this second circuit will generate though (judging from my Model 100, whose RS-232 circuit only puts out about +/- 5 volts with CMOS inverters) with its higher output impedence.

Yes, but...

a) the machine was poorly build, it just felt cheap
b) it was a 1970's design, with the floppy outside like it was an
"option". When later added to the 1040's it was equally odd design
c) horrible quality control. To keep mine working I hard to hold it on
both ends and twist it so the RF shield inside would stop pressing the ROM
pins. This had the side effect of slowly working them loose from the
sockets, so I had to open it up and reseat them every few months.

My 400 was certainly better built and the 800 was a tank. The ST I had
was cheap, notably the horrid excuse for a keyboard, and only the ignored
Mega's were substantial (and nicely designed too!).

> So I'd say that at first, the ST was anything but a junker, compared to
> its prime competition and enemy.

Although Commodore and Atari went at it head to head I don't know if
that's a fair comparison. The home market dried up in the recession and
the only people buying computers in quantity were businesses. Neither had
a compelling story to tell there, even Apple didn't really seem to figure
it out.

1960. Pokey the NEW Atari 800/800XL/5200 emulator released

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-11 00:00:00 UTC
From: mhill@one.net
Message-ID: <32289f74.6635666@news.one.net>
Source record: 80664
Cross-posted to:
comp.sys.atari.8bit,comp.emulators.announce,comp.emulators.cbm,comp.emulators.msic,comp.emulators.games-consoles

Everyone,

8/31/1996

Pokey version 0.60 has officially been released to the masses!

Pokey is a FREEWARE Atari 800/800XL/5200 emulator for MSDOS systems.
I recommend a Pentium for decent emulation. Pokey has alot of great
features. Here is just a highlight. Check out my web page for more
detailed info.

* Runs on MSDOS Systems (Pentium Peferred)
* 800/800 XL emulation
* 5200 game console emulation
* Run 8K/16K/OSS Super Carts
* 320 X 200 screen (adjustable) or Mode X (320 X 240 or 360 X 240)
* Supports up to two PC joysticks (swapple on the fly or upon loading)
* DLI and VBI supported.
* All antic modes
* Player Missle Graphics with collision detection
* GTIA graphics
* Reads XFD and ATR disk images
* Supports loading disk images on the fly in slots D1-D8 (menu driven)
* Horizontal and vertical fine scrolling
* System Monitor
* FREEWARE!!!!!! If you like it drop me a line, send me a postcard,
heck Ill take money too!

Im working right now on the following

* Sound Support (Soundblaster Compatibles)
* 4 Joystick Support (using printer port joystick interface)
* Faster Emulation (right now it seems like you need a fast pentium
for decent emulation. Ill know more when you guys start testing!)
* Support for converting MSDOS files to Atari disk images on the fly
* Paddle support
* 5200 keyboard support. Since the 5200 doesn't have any console keys
and uses the keys on the joysticks to start I can't currently start my
only 5200 rom image (frogger).
* 5200 Joystick Support. Might be there now but since I only have
a 5200 Frogger cartridge image I can't start....Not sure if it works
yet.

Im looking for assistance on the following areas.

* 5200 rom images. A friend gave me his 5200 game console and about 15 cartridges. I don't have a way to transfer them to file so they are useless right now. Any help here would be appreciated.

*5200 technical information. I have the Analog article on 5200 hardware but hope there is more.

My web page contains more information on Pokey and some links to other 8-bit sites/emulators, along with alot of credit to those who helped me on the way! You will need to get the rom images from Xformer or some other source as they are not included in the archive. I do have a link for this on my page also.

So whats the url for the web paget? Read on! So go out now and grab your copy of Pokey and drop me an email with some feedback!

I have have seen many requests for Atari Monitor Cables on this
newsgroup, so I am making my services available to custom build
them for those interested.

6' 5-pin din to 2-RCA Cable - $9 (Composite Video & Audio)
6' 5-pin din to 4-RCA Cable - $12 (Composite Video/Chroma/Lum/Audio)

These are made from high-quality cables, and I will guarantee
against DOA. Price includes shipping.
I will take orders during the next 2 weeks (9-10 through 9-25).
Cables will be sent out sometime around October 1st.

Please send Check or Money Orders to:

David P. Loewen
2315 Park Ave NE
Salem, Or 97303
(503) 399-8546

Be sure to include name, address, ph# in case of difficulties.
If you have any questions, please send them by e-mail.

ACO wrote:

> I am running PC XFORMER (the Atari 8 bit emulator).

Uh ohhh ... you're in trouble now ... you'd be better off running a
real Atari ... Or wait until RAINBOW 95 (another emulator) is
finished.

> Does this emulator really work or is it a waste of time?

It works ... after after a fashion. I've found that it will run about
5 percent of Atari software flawlessly ... about 45 percent of Atari
software will run in a very buggy fashion (but you might still be able
to suffer through the experience), and the rest just won't run at all.
(system crashes, lockups, etc)

I am guessing that you are using the DEMO version (hope you didn't
waste
your money on the complete version, as I DID!). God help you if you
need
any kind of customer support. IF and WHEN you get a response from the
author (D. Mihoka), it just might be full of profanity and ridicule,
as he
did when he last e-mailed me ... that is, before he took me off his
"official registered" customer list, so that I can no longer upgrade
his
P.O.S. software. I've been told by many others that this sort of
shabby
treatment has been experienced by more than just myself. Sooooo, I
guess
the bottom line is "let the buyer beware".

I am only telling you this to hopefully save you from what might
become a
very bad sitution, full of aggravation and turmoil.

Good luck ...

Bill
(16 yr. Atari 8bit veteran)

>bmg95960@pegasus.cc.ucf.edu

I would look in a thrift store first. If they a bunch of electronic stuff, (t.v.'s,vcr's and old computers) chances are you will find one. Or, if you a "Trading Times" or some kind of For Sale classified newspaper, I'll bet you can find one in there (But you might have to pick up a complete system for 50 bucks or less to get it.)

1966. Re: Skewed sectors ?

>
> But My dos slow down the reading of these disks>
> What exactly are skewed sectors?

A normal, unmodified 1050 might format a track like this:

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18

A high speed drive takes advantage not only of a higher data rate, but
it also knows that when the above disk drive reads sector one, it
has to wait for the disk to spin all the way around before sector
two comes under the read head. Therefore it formats its tracks
with a higher interleave, or skew, like this:

1 6 11 16 2 7 12 17 3 8 13 18 ....

When it reads and transmits sector one, sector two comes under the
read head just in time for the next request. This big decrease in
physical access time, combined with the high speed i/o makes
for a much faster drive.

MyDos is slower reading these disks because it takes longer to read
a sector from the disk, and therefore ends up not only waiting
for the sector to come under the head again, it is sometimes
farther than it would normally be in the standard 1050 format.

1967. Looking for info about the Ultima series

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-12 00:00:00 UTC
From: blm@worldnet.att.net
Message-ID: <5186v8$7bf@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 80580

Hi all.

Can anyone provide me with a short history of the releases of the Ultima series of CRPGs for the Atari 8-bits? I know at least one was released by Sierra Online and at least two were released by Origin Systems, and that this all took place sometime in the 80's. I need this information for an ongoing debate in another newsgroup. Thanks in advance for any help that anyone can provide...

I don't think so! When I first saw the wonderful flicker free 70Hz
monochrome monitor of the ST (after having seen Amiga, PCs, XL, C64 an
so on) I
really was amazed by the "professionality" of that computer. Just like
many, many people in the early ST years in Germany.

> c) horrible quality control. To keep mine working I hard to hold it on
> both ends and twist it so the RF shield inside would stop pressing the ROM

The only ATARI computer, that ever went out of order, was my 600XL.
All others worked without problems through all the years. Have you EVER
bought a PC that worked completely? No! The German magazin c't bought
about
15 different PCs and one Macintosh. Two of them worked (Apple and HP),
the rest had missing drivers, hardware bugs and so on!

Welcome to my first Classic System Auction!

*****************************************************************
* 5 rare carts added Sept. 9th! *
* 2600: Ghostbusters, Fire Fighter, No Escape, California Games *
* 7800: Galaga *
*****************************************************************

This auction contains carts for the following systems:
Atari 2600 84
Atari 5200 6
Atari 7800 4
Atari 8-bit 3
C64 6
Intellivision 3
Hardware 4
2600 docs 6

Minimum bid = .50

Minimum bid increments
.50 - 5.00 .50
5.00 & up 1.00

Shipping is extra (generally $2 - $5, hardware may be more).

Trades are also welcome. I collect anything Atari. Trades may cause some
items to be removed from the auction.

Mail all bids and offers to krieg@execpc.com.

This auction will close September 20th, 1996.

2600 - Atari
------------
C Adventure (text label)

Me too, and yes the price was right, but it still looked poor. Sorry,
the case keyboard etc. of the Amiga 100 WAS better, and I considered the
500 to be a major step backwards.

I own Macs now. They work. Regardless ST's were cheaply made, you can
grab the case, squeeze, and it bends. Try that on a PC.

Maury

Anyone out there with this updated manual? I have the OS manual
and the Hardware Tech Reference for the 400/800, but nothing
for the xl/xe series. Would the 800xl updated version of the
above manual suffice for the 130xe also? I would think
there would be some differences...

I have this feeling deep down, that there is other, perhaps
unpublished information on this topic - I could be wrong, but
I'd love to be right!

I agree on that. I never thought the keyboard/computer in one case idea
should have been carried on past the 8-bit machines. The ST's original
case design was badly flawed (that damn shielding was obviously cheap and
made it a bitch to work on the machine).

Trev:

You should have asked in comp.sys.atari.st, but that's not important right
now.

There are a number of spreadsheets for the ST; all of them work in 1 meg or
RAM (one or two even work in 512k). Other than Atari Works, I'm drawing a
mental blank right now; I'll cross-post this to c.s.a.s and hoepfully someone
will email you the right answers.

What don't you know about attaching a hard drive to the MIO?

You need a Scsi hard drive or a Scsi interface to convert MFM
type drives to Scsi. These are either Adaptec 4000, 4000A, 5500
or Xebec type and there is also an Omti interface that will work.

1980. Atari DOS disk needed

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-12 00:00:00 UTC
From: em129@cleveland.Freenet.Edu
Message-ID: <51a3gj$6ht@madeline.INS.CWRU.Edu>
Source record: 80593

I recently purchased an Atari 800XL and 1050 drive without any
software. I later purchased an SIO2PC cable so I could dl
some software from the net. I thought I could create a disk
for my 1050 by using the cable, but everytime I try to format
one (although the drive clkicks and whirls like it's formatting)
I get an Error 173 message. Do I need an original DOS disk to
boot the 1050 with, can one be created throught the SIO2PC cable,
or is my drive probably not functional? Any suggestions would be appreciated.

Thanks.

Thomas Main
em129@cleveland.freenet.edu

1981. Atari Pilot or Logo Available?

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-12 00:00:00 UTC

I heard that CSS offers an upgrade to have the XF551 be able to use 3.5 inch 720K DOS floppies. Is there any more information on this, such as how much it actually cost? Also, is there an e-mail address or web site I can go to that CSS has? Thanx

Message-ID: <32385CE0.1488@phoenixat.com>
Source record: 80596

Hi Everyone!

Could one of you tell me which power supply goes with the 1050 Floppy?
I have so many power supplies that I forget which one it is. It's not
listed in any of the FAQs that I have.

Also, if any of you are interested: there are two Atari computer books
I have in our auction in rec.games.video.classic. They are "Inside Atari
Basic" and "Atari Games and Recreations".

Thanks!

Robin

Yes, it is true ... they have 2 versions ... one converts the 5 1/4 to
a 3 1/2 ... the other makes it a dual floppy system, keeping the 5 1/4
and ADDING a 3.5" ... I have the latter one ... have had it for YEARS ..
it is GREAT!

Bill

1988. 410 Tape Recorder seeking good home! ;-)

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-12 00:00:00 UTC
From: chase@muon.rutgers.edu
Message-ID: <51alag$j53@muon.rutgers.edu>
Source record: 80601

I have an old Atari 410 Tape Recorder I'd like to find a good
home for. I could ship it, but it would cost more than it's
worth I suspect. But if you live in the NJ area or along the
route from Central NJ to Boston, MA I can probably drop it
off. Email me if you can help keep this piece of history from a
landfill.

--Kevin

P.S. The reason I need to get rid of it is simple. I store a great
deal of my stuff at my parent's home and they asked me to go through
it and reorganize it while I was last visiting. It was a thinly
veiled hint. I had unfortunately become a bit too much of a pack
rat at their expense, so I decided to turn over a new leaf and
clear out some of the more useless items. The program recorder is
essentially useless, as I have no old tapes anymore, and don't expect
to pick up any. But I hate throwing stuff out, and so here I am.

BTW, if anyone has copies of Antic v.3 #2 (May/Jun 84?), v.5 #12 (Apr.87)
I would love to buy them from you. Those two are the only ones I'm missing
except for volume one, which I suspect is rather rare.

Radio Shack used to have some patch cables that give four RCA female
plugs from an Atari Monitor-type plug. They were about $3 or $4.

(B. Wilkinson gives the prize to R. Ely for best quickie BASIC
prg. to type graphics 2 or 3 letters to the screen.)
I agree that the one quoted is shortest and best. I couldn't
remember if a PUT to screen after a GET from keyboard would
print the ATASCII char or the other code, the ones that you
have to use to POKE values directly into screen mem to get
a certain char.
I prefer no clear screen with each letter typed, or a 'special'
code to clear the screen. Just keep scrolling the text up, with
no word wrap or anything.

Dude, get a tape drive and put in your favorite tape, and press PLAY,
and type POKE 54018,60 (I hope I got that right, I don't have a tape
drive anymore so I cant test it).

Other devices have been known to use the audio line, such as hardware
speech synthesizers, and modems.

Source record: 80537

Hello!

Very sorry to bother you. My name is David Bennett, and as usual I
am seeking advice in regards to my Atari 8-bit computer.

I currently have APE, a 1050 and an XF551. I have all the different
DOS's on disk. I am wondering what other programs I need to run a
succesful system. I have seen many notes regarding something called
a 'Boot menu loader' and programs such as this. Can anyone suggest
programs that could be useful to the everyday operation of my atari?

(Which DOS should I use? How do I run bootable programs without
turning on and off the cpu while holding option? SpartaDOS reads
MYDOS, But mydos doesnt read Sparta.. does that make it better? etc
etc.)
If you have any suggestions, or comments on programs you use, I
would be greatly appreciative. Thanks!

>often come across XE systems....
>
>I'd also love to find out if there's some way of getting this thing back in
>shape....

When I got an XE system which exhibited the same behavior, I did this:
1) Cleaned the cartridge slot--this helped a little. That is,
some cartridges would work, only if I held them "just right"
in the slot. So, I opened the thing up, removed the piece of
plastic around the slot, and...
2) Bent all of the pins in the slot so that they would make
better contact with the cartridges.
3) Then I cleaned everything some more.

Now it works. If the system works fine without cartridges, and
you inspect the system board and see that no traces are cut/broken/etc,
then the probability is 99% that you just need to play with the
cartridge slot before everything will work.

>Atari Corp. was also somewhat less than voluntary.

Actually, Bushnell's departure from Atari was totally voluntary. He made
the decision to sell the company to Warner. He was kept on as CEO. He
was later fired, but it was a voluntary kind of firing. There was a
clause in his contract that he would get $100,000 per year for four years
if they fired him, but nothing if he quit. So when he decided to leave he
just stopped showing up at work. Apparently after about a year of that
Atari finally canned him. :-)

2011. Help! My Atari 400 DIED!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-13 00:00:00 UTC
From: Ray Johannsson <rpj@klg.com>
Message-ID: <3239A9A6.2221@klg.com>
Source record: 80540

After years of faithful service, my poor little Atari 400 died.

Whenever I turn the power on, all I get is a black screen.
Does anyone have a diagnostic manual or any clues how I
can bring him back to life?

Please email me, I'll post the replys.

Many thanks in advance!
- Ray

I think you missed his point. He was not saying that gcc takes too much
memory to run, he was saying that programs compiled w/ gcc take up too much
memory, and I believe he's right. I know a simple hello world using printf
rather than write takes up about 100k or so. Way too big to be very
useful.

: you help. Thanks.

There are several, I think. The one I've used is Stella 0.4, which runs quite a few games very well. It doesn't yet have sound support, but I'm sure that's in its future.

I don't have the website available, but you should be able to find it by doing, say, an Altavista search using the keywords "stella atari."

: Can someone help ...

For many of the emulators, the files have to be placed into a disk image (an ATR or XFD file). There's a program called Imageman that'll do this for you. (You can find a link to it off of Yogi's "Jellystone" web site. Try one of the search engines and I'm sure you'll find one or the other.)

-Thomas Main
-em129@cleveland.freenet.edu

Pilot is logo like but not logo. Logo is logo.
Both languages are easily copyable off of Carts, if someone has the
carts available.
I dont, ergo they are not in the archive, and I have not replaced ALL
the software I lost in the 80's yet.

2018. Atari article in WIRED Magazine.

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-13 00:00:00 UTC
From: msteve@magnus.acs.ohio-state.edu
Message-ID: <51aivj$h1g@charm.magnus.acs.ohio-state.edu>
Source record: 80607

Found a neat little (well shown actually) article about Atari in the
October 1996 issue of Wired magazine. It basically goes through a brief
history of Atari when it started "From $500 to $452 Million and back again."
Gives some bios of people we adore (Jeff Minter with a snippet of info on his
current project) to people some of us loath and detest (No, not Peter, but
Jack Tramiel).

Though it does tell us that Atari itself has withered away, it shows us what
Atari has done for the Computing Industry. One way that it shows this is by
a four page wide graphic tracing the paths of the major people who worked
there, what they did and what they are currently doing.

This article is extremely well done, and I thought I'd share it with the Atari
Community who probably wouldn't be inclined on the whole to purchase this
magazine. Also want to publicly thank the author who gleaned all this
information, Nick Montfort, for doing a superb job in its creation.

If you want to see what Atari has done, and what its people are doing right now
all condensed in a usefull and easy to follow timeline, this is the article for
you.

> I agree on that. I never thought the keyboard/computer in one case idea
> should have been carried on past the 8-bit machines.

Yeah, with the 8-bit it wasn't too bad because it was small and
typically only had an SIO, power and TV cables out the back. The ST was
roughly twice as large, had cables all over the place, every time you
moved it you had to drag everything with it.

> The ST's original
> case design was badly flawed (that damn shielding was obviously cheap and
> made it a bitch to work on the machine).

My serial number was under 1000!

Maury

There is a place in Texas, called Timeline, don't have their number but the interface can be obtained from them. Look in a Computer Shopper you will find both items listed there..

You also need a power supply to power the hard drive don't get anything smaller than at least a 65 watt power supply for a single drive mech.

If you boot DOS from the PC using the SIO2PC cable and APE or the SIO2PC software and can get to a DOS menu, you should be able to format the disk in the 1050 drive.

FOR SALE

ATARI 520 ST, 512k, MOUSE, PS, no manuals
TWO SF 314 DRIVES, CABLES, PS, no manuals

I have some software, but it's mostly free/shareware.

$60 plus shipping. Offers are welcome.

All the above equipment is in working condition. The only thing that is
wrong with it is that one of the drives formatting is a little off,
but it operates just fine while performing other tasks.

I would prefer to ship within the US, but I will consider foreign offers.

Please e-mail if you are interested.

(Tom has problems creating DOS disk. Using sio2pc and 1050.)
Ah Ha! I found error 173 in a Indus book. It means you're using
a pre-used disk or a old disk or something. It means the
drive found a bad sector, and, unlike messy dos, the drive
can't 'ignore' it and go ahead. You need a different disk.
I suggest getting some fresh dbl dens (the ones with the
hub ring) disks. I have no idea if sio2pc or APE can
send a format and write DOS command, but apparently they
can or you wouldn't have been able to try it.

>
If you have the 1050 and the SIO2PC connected to the Atari at the same
time, one of them must be set as drive 2. I don't know how you change the
drive number in SIO2PC, but on the 1050 you move the black drive select
switch to the right to make it drive number 2. If this isn't the problem,
maybe you were trying to use high density disks instead of double density.
Or maybe there is something wrong with the drive. It could be as simple
as the head needing cleaning, or the pressure pad might have come off.

2037. 1050 Power Supply Question

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-14 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <323a9d8d@pianosa.demon.co.uk>
Source record: 80550

Whilst reading the usual rubbish I find here, John & Robin Whitcore wrote
something interesting to All about 1050 Power Supply Question:

Hello John,

JRW> Could one of you tell me which power supply goes with the 1050 Floppy?

It's a 9V, 27VA ac one. I can't read the part no on mine, sorry. They're both
buried well inside my computer setup.

Not experienced per se with using the SIO2PC cable, so I can't comment
about checking for addressing conflicts (making sure the disk drive is
addressed to a non-PC accessed drive number), but I would like to
mention that if your SIO2PC cable is one of the type requiring a diode
to isolate the SIO bus devices, make sure that is included in your
cable. Otherwise you can only use the PC on the SIO bus, and no other
SIO peripherals while the PC is hooked up.

On Fri, 13 Sep 1996, Cyrus Malek wrote:

> OK now, there is an input pin on the SIO connector labeled 'AUDIO IN'
> that connects directly to the AUD pin on the POKEY chip. I haven't seen
> any written description of this input. Does anyone know what it is for?
> Can it be used for sampling? Hmmm...

I believe that is use for piping sound through the 8-bit and playing it
out from the TV speaker. So if you attach a 1/8 inch jack in the SIO
cable and plug in a tape player(assume this is mono and not stereo) then
it comes out the TV along with whatever sounds the Atari makes.

2041. Re: Atari Pilot or Logo Available?

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-14 00:00:00 UTC
From: asharkis@aol.com
Message-ID: <51f0bo$nrk@newsbf02.news.aol.com>
Source record: 80554

Logo is a subset of Lisp, and as such, is a language that allows lists of words to be processed easily. It also has Turtle Graphics included, and that's the way in which many young people are introduced to programming. Atari Logo comes on a cartridge, has the ability to program as many as four turtles on the screen at once, and a whole lot of Atari-spcefic bells and whistles, but lacked some of the housekeeping and organizing functions on other platforms. It was the inspiration, so they tell me, for LCSI's LogoWriter, an extendible word-processor that was very popular in elementary schools. LogoWriter, in turn, was sold to the schools to run under several platforms, including Apple][, Commodore, and IBM, but ironically NOT Atari. Programs in Logo are built out of short procedures, which can call themselves recursively and call others. As a result, programs in Logo can be extremely structured. However, the Logo interpreters are all rather slow, so that programming large applications just isn't practical in Logo.

PILOT is a somewhat BASIC-like program that was originally designed as an authoring language with simplified commands for non-programmers to write such things as simple CAI utilities. The Atari version, also on a cartridge, includes a form of Turtle Graphics, but the weakness of it is that the turtle is not visible on the screen and cannot be moved in immediate (real time) mode. I don't think PILOT ever caught on to the same extent as BASIC.

I own both languages, and their manuals, but I'm not willing to part with them at this time. However, I believe that B&C Computervisions, and perhaps Best Electronics may still have them for sale.

Yes, there is a device called a TransKey that uses an at keyboard. I have
3 of them and they work REAL well. Now for the bad news. They are not
made any more. Bob Woolley and I were thinking of designing a new one and
have not had a chance to.

2045. Rom Images availble??

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-14 00:00:00 UTC
From: dillera@Glue.umd.edu
Message-ID: <51ff4n$rcr@hecate.umd.edu>
Source record: 80558

I had seen the images before at some ftp site. Now, of course when I need them, I can't find it.

Does anyone know the address of a site that has the os roms already in an image?

thanks

```

You mean far LESS advanced.
At least in terms of graphics (colors) and sound (yeech)

2049. HELP with Imageman and APE

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-15 00:00:00 UTC
From: Elvis Smurf <esmurf@ibm.net>
Message-ID: <323C4512.3451@ibm.net>
Source record: 80470

having difficulty getting an .atr image created with imageman to be recognized by the atari when mounted through APE shareware. APE crashes with a runtime error if the .atr image is empty (unformatted?).

furthermore, i cant seem to format ANY image created with imageman, imagic95, or ape. i get error 139, 138.

my goal is to move some of the single program files obtained from the archives into an .atr file, thus allowing me to use them on my 800 xl through APE.

are there any other utilities out there? am i missing somehting obvious?

2051. Hard to Find Atari Items,

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-15 00:00:00 UTC
From: Mike LaRue <bandit@cdsnet.net>
Message-ID: <323C67D1.2397@cdsnet.net>
Source record: 80472

The Following Items Are from 1979 till 1990's, I have bought
MANY Items, over the years from my 8bit atari and now Iam
selling off more of them.

Thanks to all the others that bought from me over the last
couple of months!!

All Items are complete unless stated, all have been tested!

Shipping, I use US Priority mail 3 days, Had nothing but 100%
good luck using it. Cost is from $3.00 to $7.00

Payment, Checks takes 8days to clear, money orders same/next
day, COD is fine with a $5.00 depost.

RamPOwer 32 complete for the 400/800 only box&doc $10.00
MicroPrint interface, NO box or doc (not needed) $15.00
Atari Touch Tablet (atari brand) cart and doc and
also the sterofoam box, but not the outside box. $20.00
Basic XE cart, lost the doc's $10.00
Editor Assembler with doc's no box $10.00
Choplifter cart, with box and doc's $ 5.00
OmniMON XL, chip only no doc! (paid $79.95) $15.00

Atari Banner Silk type, 1982 warner communications company
with the letters A T A R I in BLUE color! size, 59" by 30"
If you have ever been to an Atari show, you might have seen
This. My wife bought this for my birthday back in 86, She
forgot what she paid, I posted this a weekago as makeoffer
I had a few people reply, from $5.00 to $75.00 and the high
bid changed his mind, This is a hard to find Item. $100.00 obo

|
| I think you missed his point. He was not saying that gcc takes too much
|memory to run, he was saying that programs compiled w/ gcc take up too much
|memory, and I believe he's right. I know a simple hello world using printf
|rather than write takes up about 100k or so. Way too big to be very
|useful.
|

That's a function of the system libraries, *not* an artifact of the
code generated by gcc.

If you examine the code generated by gcc (using optimization), you'll
find it's just as tight as that generated by any compiler targeted
exclusively at embedded systems, for the same architectures.

There are other issues WRT using gcc generated code for embedded
programs, but code density is not one of them.

$$

Taking 5 minutes to read what follows can change your life :

If you follow the three steps below, there is no reason why
the same shouldn't happen to you! This is a legitimate
investment opportunity. You invest $5, and you receive a
return on your investment. So does the next investor. NOT
ILLEGAL, NOT A CHAIN LETTER- PERFECTLY LEGITIMATE.

The procedure is simple: 1) Write your name and address on 5
sheets of paper. Below that, write the words, "Please add
me to your mailing list." Fold $1 note or bank draft or
money order in each piece of paper and mail them to the
following 5 addresses.:

1. Bill Brown
148 South Downlen #796
Beaumont, Tx. 77707 USA

2. Olivier Arcadipane
237 rue Francois Andre
7390 Quaregnon BELGIUM

3. Josef Malzer,
Brandhof 1
4701 Bad Schallerbach
EUROPE - AUSTRIA

4. Sam Kamoutsis,
Sitias 22
123 51 Athens
GREECE

5. Michael Graves
122 Harmony Road
Murphy, NC 28906 USA

2) Now remove the top name from the list, and move the other
four names up. In other words, #5 becomes #4 and so on. Put
your name as the fifth one on the list. Use a simple text
editor such as Notepad, in your "accessories" window (If
you have MS-Windows),or DOS editor. In fact, any editor
will do.

3) Post the article to at least 200 newsgroups. There are
17,000, so it shouldn't be hard to find that many. Try

posting to as many newsgroups as you can, and the bigger the newsgroup is, the more people are to see your message!

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return is. If you wish to remain anonymous, you may use a psuedonym, call yourself "The Manager", "The Boss", whatever but make sure your address is correct.

Now, here is why the system works:

-Of every 200 posts I made, I received 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

-Each person who sent you $1 now also makes 200 additional postings with your name at #4. ie. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. $50.

-Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people = $500. They make 200 postings each with your name at #2=100,000 postings=5000 return at $1 each=$5000.

-Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THATS IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS! Total income in one cycle=$55,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. the more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5, AND 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money? "Big Deal, so you lose $5-but what are the chances of that happening ?? Do you Realize that NOBODY cares for the LEGAL chance of winning such a BIG money as 50,000.00 $$$$???? and all for a microscopic investment of five separate dollars? just think of all of the new Internet users that join the net every day!!!

There are millions of internet users, and millions of new net surfers every month !!! This is the great plus of the Internet, people all over the world can hear you and listen carefully if you talk reasonably. Everyone will take that

chance ! I agree, If it wasn't the Internet, and was a small circle of people, the chance wouldn't have been so small. the amount of money had to be 200 times bigger, and the chances were zero. It wouldn't succeed.

But here, on the Internet, it is a giant village, where new thousands of members join in every day ! you CAN'T lose !!!!

Remember- read the instructions carefully, and play fairly. That's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER-HONESTY IS THE BEST POLICY. YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!! BESIDES,NOT PLAYING THE GAME FAIRLY IS ILLEGAL.SO LET'S BE REASONABLE AND PLAY FAIRLY,SO WE CAN ALL ENJOY THE INTERNET GOLD MINE.

GOOD LUCK FOR YOU ALL, And remember, play fair and you'll win, I don't want to mention what might happen to those who won't. AND AGAIN,SEE YOU NEXT TIME WITH SOMETHING YOU WANTED FOR A LONG TIME !!!

2056. MyDOS 5.43/3 doesn't work on 130XE!?

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-15 00:00:00 UTC
From: mas@rimmer.ngdc.noaa.gov
Message-ID: <mas-ya023080001509960938390001@news.colorado.edu>
Source record: 80564

I downloaded MyDOS 5.43/4 from somebody's archive and installed in
on the Rainbow emulator for the Macintosh. It works fine on the
emulator. Then I used ymodem to transfer it to my 130XE only to find
that the drives start to spin up then it stops and never boots. I don't
get the basic "Ready" prompt or anything. Any ideas why it won't work
on the 130XE but it does on an emulator? (Other files that I have
transferred work just fine)

-Mark

Uh, uh...it's the 16-bit Atari that's far more advanced. Ask on
comp.sys.atari.st for more details on it.

Try http://users.aol.com/autismuk/a26home.htm

From this page you can download a beta release of a 2600 emulator.

Theo.

I think, he talked about gcc itself, not the application generated by
gcc:

> C. Alex. North-Keys <erlkonig@magrathea.origin.ea.com> wrote in article
> <87ohpmr7fe.fsf@magrathea.origin.ea.com>...
> > | And then there is the problem that gcc does not only take much memory
> > | for its code but also for data - it's notorious as a memory tester for
> > | PCs because of its huge working set.

So he said, *gcc* (not the generated application) takes much memory,
and it's a memory tester *for the PC* (not for the destination
hardware (6502)).

> I know a simple hello world using printf rather than write takes up
> about 100k or so. Way too big to be very useful.

The 100k are not the object code for the main function of the hello
world program. They linked to the executable by the linker from the
libc. printf() is in libc and in turn requires the linker to link
some additional function such as malloc()/free(). You probably
compiled with debug code and linked statically, so that your
executable contained all this large stuff. If you link dynamically
and strip your program, it will be only a few kilo bytes. And even
that comes mostly from crt0.o or crt1.o, crti.o, ...

gcc really generates very tight code if you let it optimize (-O, -O2,
or higher). If you want to see, what gcc generates, use the -S option
and look at the assembler code.

2063. FS: Sweet Atari 8bit cart bundle, enhanced XF551 drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-16 00:00:00 UTC
From: mstclair@iglou1.iglou.com
Message-ID: <DxtDB2.4A6@iglou.com>
Source record: 80476

The following carts are for sale, I will not separate them.

Super Breakout (w/box, docs)
Space Journey (w/ box, docs, box has trashed top flap)
Space Invaders (w/ docs)
Caverns of Mars (w/ docs)
Jumpman Jr.
Defender (w/ docs)
Donkey Kong (w/ docs)
Mega Mania (w/ docs)
River Raid (w/ docs)
Basic
Kaboom! (w/ docs)

Best offer $30 or over takes the bundle. You pay $5 for insured shipping.
If I don't get an acceptable offer, I will auction them off soon.

Also:

Atari XF551 (double sided, double density) drive, with "update" chip to
fix compatibility problems and improve speed.

Best offer $40 or over takes it. You pay $10 for insured shipping. Will
auction off in the near future if I don't get an acceptable offer.

to
>use them :-(
>
>Can someone help ...
Simply, change the file name to autorun.sys then restart the emulator
with that disk image as the D1: drive. You must also have DOS on that
image.

rely@ix.netcom.com -or- rsely@dhs.state.nj.us

2065. Re: Another dead 1050 disk drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-16 00:00:00 UTC
From: BobKlaas <bobkla19@mail.tcd.net>
Message-ID: <51jgt7$8cg@news.tcd.net>
Source record: 80478

The Track Zero may have some disk dust in it preventing it from functioning. Try cleaning it first if it still does the same thing then I may be able to come up with a replacment for about $6.00 shipped.

Bob

2066. Re: Zork I , II, III

> Richard Dell

Thanks for the info, Richard. You've pretty much confirmed my initial concern: that the circuit it's technically perfect. I asked the question because I really couldn't see any way that the circuit would be able to generate the -12 to +12 volts needed for RS232 when going from the Atari to the PC (or Mac, as in my case). Indeed, I can see that we are exploiting the flexibility of the RS232 spec here.

```
Welcome to my first Classic System Auction!

This auction contains carts for the following systems:
Atari 2600 84
Atari 5200 6
Atari 7800 4
Atari 8-bit 3
C64 6
Intellivision 3
Hardware 4
2600 docs 6

Minimum bid = .50

Minimum bid increments
.50 - 5.00 .50
5.00 & up 1.00

Shipping is extra (generally $2 - $5, hardware may be more).

Trades are also welcome. I collect anything Atari. Trades may cause some
items to be removed from the auction.

Mail all bids and offers to krieg@execpc.com.

This auction will close September 20th, 1996.

2070. Re: Atari 1040 ST

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-16 00:00:00 UTC
From: asmolar@nscs.fast.net
Message-ID: <slrn53qmnn.6kt.asmolar@nscs.fast.net>
Source record: 80483

>You mean far LESS advanced.
>At least in terms of graphics (colors) and sound (yeech)

Huh? How is a minimum resolution of 320x200x16 colors out of 512 or 4096 less advanced than a maximum of 320x192x2 colors out of 128? Of course you can display more colors on both computers with special programming.

Sound. While the Pokey chip in the 8-bit had 4 voices, and the Yamaha in the ST only has three, the ST can use it to play digitized samples in real-time with decent quality, just check out any of Jeff Minter's work.

On the 8-bit, most digitized sound attempts that I've seen had to shut off the antic chip, (which turns the screen black) Other software that didn't shut off the Antic still couldn't do anything else while playing the sounds.

I own both, and I like both, but I couldn't honestly pretend that the 8-bit has more advanced graphics and sound.

2071. Atari 800/XL/XE/XEGS Cartridge List 2.2

Newsgroup: comp.sys.atari.8bit

I picked up a used Commodore 1702 monitor and built a cable for it.
It's pretty easy, and all of the parts can be had at Radio Shack (if
you've got nothing better in your area). You'll need:

1) A/V patch cable (with yellow, red, and white RCA connectors)
2) PC large-type keyboard DIN connecter (5-pin)
3) Pin-outs for the signals coming out of the Atari
4) Soldering tools

I know that the pin outs were in Antic magazine, and they're probably
floating around on the web too. Simply slice off the end of one end of
the patch cable and solder the appropriate signals onto the DIN
connector.

-Michael Ellis

2073. How can I connect Atari800XL with a PC?

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-16 00:00:00 UTC
From: aabuslem@puc.cl
Message-ID: <51k3tv$hvg@huequi.puc.cl>
Source record: 80486

Hi!
Does anyone know how to connect an Atari 800XL with a PC IBM-compatible
via parallel or serial port?

The idea is to use the hard disk of the PC to store data from the
Atari. If anyone knows how to build a cable to do that, please post it.
Thank you.

P.D: Excuse me for my english, I don't speak english very well.

As far as Nolan Bushnell departure from Atari it went something like this.

Nolan needed money to get Atari to grow. Warner had money it wanted to invest. Nolan got millions, but part of the deal was that he stay on to direct things. Since it wasn't his (Nolan's) money in Atari, Nolan got bored and spent afternoons playing tennis. Warner wanted to replace Nolan (since he wasn't minding the store anymore) and at Nolan's suggestion, Warner opted to remove him via a clause in his contract (that happened to net Nolan more money) In essence he asked to be ousted and got paid for it. The only one doing any pushing here was Nolan.

I was once a Radio Shack Store manager. Discontinued years ago. You could buy the parts and assemble a cable, but its not easy. Takes good soldering skills with the 5 pin din connector. Try Best, American Technavision, B & C computer or maybe Bob Klauss.

2076. Re: Atari 1040 ST

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-16 00:00:00 UTC

-
-I own both, and I like both, but I couldn't honestly pretend that the
8-bit
-has more advanced graphics and sound.
-
Yeah, I have both too, and an Amiga right next to it, (which has the
best sound).
About the best thing I like about the ST is the GUI, far ahead of its
time. Better than what the MAC had at the time too.
I was thinking mostly in terms of which platform is more FUN
and thats definately the 8 bit (You don't see me busting the doors
down for an ST archive, now do you?) :)

2077. Atari Stuff for sale.

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-16 00:00:00 UTC
From: lhaus@Mail.ff.cc.mn.us
Message-ID: <19960916162354.aaaa00571@babyblue.cs.yale.edu>
Source record: 80490

Ahh, House cleaning. My what cool stuff I have here. All of it just stitting and gathering dust.

Audio Digitizer for the 8-bit.
Made this one from an artical in Antic or analog.
Works fair, Ram is the limiting factor on 400.
I Imagine a 130 XL could do more.
Software, articals everything included.

Micro Illastrator and Chalk Board drawing tablet.
Cool ! I remember tracing stuff with this and all my origional art work. I'll throw in a disk of my master pieces too.
Some times areas of the tablet seemed dead or required extra pressure to activate.

Computer eyes Video digitizer. with enhance software.
Requires a VCR that has a good still picture function as Hi-rez
Captures require 8 to 10 seconds.
I was thinking this might be great for making GIFs for a web page.

I'm Not sure what price to ask for any of this stuff so make me a offer.

Lhaus@mail.ff.cc.mn.us
or
Kerdunge@Juno.com

See my Web Page at, http://www.ff.cc.mn.us/larry/3d.htm
it has nothing to do with Atari (yet) and a lot to do with 3d photography

2078. 130XE 320k Ram Upgrade

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-16 00:00:00 UTC
From: Richard Heldmann <richard.heldmann@internetMCI.com>
Message-ID: <51ko1p$sh1@news.internetmci.com>
Source record: 80491

I am trying to perform Scott Peterson's 320k upgrade to my 130XE. But I can't find a 74LS158 chip! Can I substitute another more popular chip in its place?

Rick Heldmann

2079. Re: 800 assembly

2080. Audio In on SIO port

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-16 00:00:00 UTC
From: cyrus.malek@amd.com
Message-ID: <321090fc.2491858@txnntp>
Source record: 80493

OK now, there is an input pin on the SIO connector labeled 'AUDIO IN'
that connects directly to the AUD pin on the POKEY chip. I haven't
seen any written description of this input. Does anyone know what it
is for? Can it be used for sampling? Hmmm...

It should work. Did you transfer the DCM file and then extract it on the
Atari?

2083. 800xl/ 130xe os dissassembly listing and another question...

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-16 00:00:00 UTC
From: cyrus.malek@amd.com
Message-ID: <323ddd51.275269899@txnntp>
Source record: 80496

Where can I find an OS listing for the 800xl/ 130xe systems? I have the 400/800 Technical Notes Packets (Hardware, OS, etc...) but I'd like to see exactly what the xl/xe OS looks like (preferably with explanations of what has changed, and how to use the new features).

Also, somehow I ended up with a copy of Chapter 8 of some manual that is titled (Operating System). This chapter describes the 400/800 OS and has references to other chapters in the same manual. I want to find out what manual this is and would like to get ahold of this manual. I think Chapter 9 of this manual is "Disk Operating System".

Someone out there must know what manual this belongs to...and hopefully where I can obtain it!

Please help!

Cyrus

2085. Re: How can I connect Atari800XL with a PC?

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-16 00:00:00 UTC
From: asharkis@aol.com
Message-ID: <51k9da$j3h@newsbf02.news.aol.com>
Source record: 80498

The SIO2PC cable will do the job. You'll need either SIO2PC software or A.P.E. software. The authors of both are frequent contributors to this web and can help you find out where to get the software and either the cable or plans for building it.

Another way to do the job is by using a null-modem cable and running terminal programs on both computers. Of course, you'd need an Atari 850 interface or a P: R: Connection to go with your 800XL if you want to do it that way.

That way ATARI had real "multi media" already in the 1970s. If have a very good
"Introduction to BASIC" on cassette, with graphics, programs and spoken instructions coming from tape.

The 74LS158 should be pretty easy to get. You just have to look at places
other than Radio Shack (RS sucks).

You probably can't substitute another chip, BTW. I don't remember for
sure off the top of my head, but I think the '158 is an address decoder.
The decoders in the 74xxx series aren't too interchangeable. There are
some chips where you could make a substitution (for example, the 74373 and
74573 are the same except that the '573 has a nicer pinout), but I don't
recall any duplication in address decoders.

Sure, go ahead and use a 74ALS158 or 74HCT158 or 74F158.
Have I missed any? So long as it is a 74(x)158 it will work.

It's mixed with the output of the pokey chip and sent to the tv speaker.
It can't be sampled, but you can actually mix data and audio tracks if you
prerecord it on a stereo cassette deck. I remember reading that you could
put audio on one channel and data signals on the other and get the atari to
start and stop the tape when it reaches the marker signals.

Check out the online catalog of JDR Microdevices at
http://www.jdr.com. They have the 74ls158 listed at
0.69, with a minimal discription. Check the giicm for
a functional sheet.

angel, i highly recommend hte APE PRO system. please check the popular atari 8bit archives for a link. not only will it let you use pc harddisk as mass storage, but it gives you access to pc files through atari dos, use your pc modem (R: !), and of course (!) your pc printer. highly recommended. btw, also reads/writes heavily protected atari disks.

I just finished scanning in the ICD MI/O manual. It is currently in
Word for Windows 6.0 (Winword) and a very messy raw text version (ASCII
not ATASCII). It could very easily be converted to either raw ATASCII or
maybe AtariWriter+ format. The problem with this document is that it
includes tables. I'l have to find a way to format them for the 8-bit.
Anyway, to answer your question, absolutely! Use the capture text mode
(OCR) then save it in a format you can easily work with (like I used RTF
(Rich Text Format) which Winword likes). Then, if the document is just
text (no pictures or lines), simply do a cleanup (you will have to do
this) then save it in both your word processor format and ASCII. The
ASCII format is easy to convert to ATASCII and/or AtariWriter or other
8-bit word processor format.

They only wrote the emulator because they were too lazy to port each one
of them.

Am I right on this?

> Mr. Maddog

As I recall, the u/g consists of a 720k mechanism and a new ROM for the drive. There's also an option to add a 720k floppy, where the 3 1/2" drive becomes one drive higher that the 5 1/4" (if the original 5 1/4" mech is D1:, the 3 1/2" is D2:)

Bob Woolley had plans for swapping out the mechanism, along with patches to the XF551 ROM that were needed (I think you can use a 2764).

What the Atari community _really_ needs is a Bob Woolley hardware archive!

I don't think so. According to my ECG Semiconductor Master Replacement Guide, anything related to the 74LS158, whether it be the M74LS158 or LS158, the replacement would be a 74LS158. I wasn't able to find the description of the chip, though I went through the entire book.

Someone else may have a better answer. I spent a couple days looking for the CD4040 chip that the 38.4 upgrade uses, and came up with the regular 4040 chip, which a local electronics parts store agreed with, after going through the ECG reference book. It's worth it to buy it, around $4 US. There's also mailorder, so look into those. I don't have any addresses handy so some of you may be able to provide them.

No ... but you can find that chip at such places as:

Digi-Key
Mouser Electronics

These are both mail order electronics houses with 800 numbers .. contact 800 info for their numbers, as I don't have them at hand. Another local source would be a local electronics and/or radio/tv repair shop. A third alternative is to find a local ham radio operator or club .. most of the older hams can give you additional resources.

Bill, KB8EB
(ps .. I did the 320k mod to my former 130xe .. worked fine)

> hardware (6502)).

Since it was me who wrote the quoted paragraph: yes, you're right.
What I meant was the unfeasibility of a _native_ 6502 gcc.
A 6502-_targeted_ gcc might well be possible (you better use short
for int though...)

> gcc really generates very tight code if you let it optimize (-O, -O2,
> or higher). If you want to see, what gcc generates, use the -S option
> and look at the assembler code.

Voila, for the Hello World example, here's the 386 code from gcc:

```
.file "hello.c"
gcc2_compiled.:
___gnu_compiled_c:
.text
LC0:
.ascii "Hello world\12\0"
.align 4
.globl _main
_main:
call ___main
pushl $LC0
call _printf
addl $4,%esp
ret
```

That's the whole program. Don't count the "administrative" stuff (the
empty symbols and ___main call) and you haven't left much to take out.
:-) If the linker makes this into 100k, you likely have no shared libs
or aren't using them.

If the military series has the same function as the commercial series,
then the 74158 is a Quad 2-input mux.

The 74F158A is a quad 2-input mux (inverted) based on national semi's
product information pages. You can order samples of nat semi's parts
online at:

http://199.2.26.194/cadis/category.cgi?subclassid=412

BTW, where are the directions for this upgrade located...I lost mine.

True, GEM was always more responsive than the Mac and Win, If you put
a faster PC or Mac next to it, GEM would always "feel" faster.
It doesn't have a lot of the cooler features though.

>I was thinking mostly in terms of which platform is more FUN
>and thats definately the 8 bit (You don't see me busting the doors
>down for an ST archive, now do you?) :)

Fun, yes. When I think of memorable 8-bit games, many come to mind.
When I think of memorable ST games, I usually draw a blank.
And I've played many more games on the ST than on the 8-bit.

Neither machine gets much use anymore. I spend most of my computer
time using my PC, but I run emulators for both machines (which are usually
faster, they just botch the music :))

2110. Flippy Disks on an Emmulator

Hello 8-bit'ers
I have a Emmulator or two up and running on my PC (XLITE, XF2.5 and even Pokey) I have several origional Copies of Scott Adams SPIDERMAN TEXT with Graphics adventure on 8-bit disks (I think it's got coll graphics.) I have also downloaded a disk image to try on the emulator. It's copy protection scheme always requires one to flip the disk over sometimes more than once. Anyway... How do I filp a disk Image. Having the flip side disk image in drive 2 doesn't seem to work.
I thank you for any help or info that will get this game and others like it up and running on an emmulator.

On the same subject, How was this disk image made? are both sides there? when I downloaded it off the net the FTP cite listed it as SPIDERMAN (A/B)

> useful.

What does the compiler (gcc) has to do with the size of the program
added by using printf()? Nothing at all! If you don't manage to
install your system correctly (or if you use a stupid old system like
MSDOG) you'll end up with large binaries:

static version: 88008 byte

The version using shared libs has

shared version: 4280 bytes

where the exact distribution is

text data bss dec hex filename
1332 1367 20 2719 a9f hello

The main part of the text section is due to the startup code.

So don't tell ever again that gcc is responsible for a large binary.
All this is done using gcc.

Source record: 80517

Hello 8-bit'ers

I have an Atari 2600 memory expander called a Supercharger from STARPATH which changed it's name to ARCADIA for some copyright reason or other. This device increased the 2600's memory from 4 K to 12 K. It has lots of cool games on audio cassettes. The last direct mailing I recieved from the company way back in 82 or 83 said they were working on Atari 8-bit versions of their games. Does anybody have any of these conversions? They had strange names for example there GALAXIAN game was called "COMMUNIST MUTANTS FROM SPACE." Is it possible to Convert these cassettes I have to A PC disk for use with the 2600 Emulator?

Thank you for your help everyone

I believe that you can also use the Atari 2600 Action Pack. I 'almost'
got flamed a while back since I thought that all Activision had done
was port over the old 2600 games. However, it turns out that it is
actually a proper emulator and all you need is to get hold of some
2600 game binaries to run on it.

Hi! It's been a while. Unfortunately, I've been too busy to do newsgroup stuff lately, but will get around here again soon, I hope. :)

Anyway, I just wanted to let everyone know that the UMICH FTP site is still growing. I've finally gotten around to entering a lot of the new uploads to the site, as well as re-adding files which I had taken offline (ie, the directory they used to be in was removed or something).

So, to see what's up, check out:

ftp://atari.archive.umich.edu/atari/8bit/

aka:

gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

Take special note of the 00.* files and the "Newitems/" directory!

Have fun!

-bill!

```
=====================================================

I have a baker's dozen of ATARI 8-bit books to sell.
The following is a description of one of those books.

Contact Bob Bell at <dj390@freenet.carleton.ca> for
a complete description of all of the books via e-mail.

=====================================================

ITEM NINE:

***************
** Asking $5 **
***************

Mapping The Atari (Original Edition)
By Ian Chadwick w/Introduction By Bill Wilkinson
COMPUTE! Books, 1983, 194 pages
(Excellent Condition, Some Writing On Pages Inside)
List: $14.95

From the front and back covers:

"A comprehensive sourcebook and memory guide
for beginning and veteran programmers of the
Atari 400 and Atari 800 personal computers.

Created to fill a need for a complete, comprehensive
guide to the memory locations in the Atari 400/800,
useful to both beginning and veteran programmers.
Although parts are available in other publications
no previous collection has provided complete cross-
references, detailed explanations, and a tutorial
approach."

Contact: Bob Bell (dj390@freenet.carleton.ca)

This book was published prior to the release
of the XL/XE operating system, and only deals
with the original 400/800 operating system.

Prices are US dollars, and do not reflect shipping.
Buyer will pay actual cost of a shipping bag and
parcel post shipping, which varies by distance.

Discounts may be granted for quantity purchases.

While you are correct on all accounts, you are comparing apples to
oranges. The 8-bit grapfics system design which later became the same
design system for the Amiga is definitely much better than that of the
ST. I've had and worked with the ST series and the Amiga as well as the
8-bit. The general design concept of the display list is (Copper list
of the Amiga) works really well and can be adapted better than the
system in the ST for many different graphical formats.
As for the sound of the 8-bit, the POKEY sound is lacking and
rather crude compared to even the C= 64 SID. Of course the synth chip
in the ST will produce much better sound. It is also running at much
higher frequencys than the POKEY and is much more complex. The POKEY is
doing nopthing more than clock division and masking. Nothing fancy
about that. The ST uses a 16 bit synth chip to do its work. On the
other hand, digitized audio could be done with the 8-bit, much better
than it has been. However, the 8-bit machine would require an external
DAC to reconstitute the data back to audio. The 8-bit machine would
only be a file handler, not the sound processor. I guess that wouldn't
really count though.

James R. Gilbert (cb541@cleveland.Freenet.Edu) wrote:

: (B. Wilkinson gives the prize to R. Ely for best quickie BASIC
: prg. to type graphics 2 or 3 letters to the screen.)

uh,GR.1 and 2 are the text modes.3 is a graphics mode.

: I agree that the one quoted is shortest and best. I couldn't
: remember if a PUT to screen after a GET from keyboard would
: print the ATASCII char or the other code, the ones that you
: have to use to POKE values directly into screen mem to get
: a certain char.

The S: device works pretyy much the same as E: device,when dealing with
output.But you get "blocks" (inverse spaces) when you output a return in
text (GR.0) mode.At least when copying to S: from a file from DOS.

: I prefer no clear screen with each letter typed, or a 'special'
: code to clear the screen. Just keep scrolling the text up, with
: no word wrap or anything.

uh,am I missing something?
Why do you need a special key at all.Just use the [clear] key.(shift-<)
Also:since you're using split screen,it would be better to use INPUT
instead of GET since S: also doesn't like backspaces (at least with GR.2).
That is to say,you can't edit or backspace over what you typed.
Then,of course,you'd have to use [ESC][CLEAR] to imbed a clear-screen code
into the input line.

2123. Re: HOW TO LOAD AN ATARI 8-BIT PROGRAM?

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-18 00:00:00 UTC
From: dklugh@freenet.columbus.oh.us

Source record: 80436

ACO (clockwrk@ix.netcom.com) wrote:
: Hopefully this is an easy question. I used to use Atari 800s many
: years ago, but even the simplest of commands have been long lost in
: memory.

: I am running PC XFORMER (the Atari 8 bit emulator). I have put
: MULE.EXE and MULE.COM in the same directory as the emulator files.
: From the READY prompt, I have tried typing LOAD "MULE.EXE" (and I did
: the same with MULE.COM) and I get "error 130" or something like that.

Arghh,you should've remembered the number exactly.
If you actually got error #130,that means that the device doesn't exist.
You have to type a device prefix.Like "D:MULE.EXE".The Atari thought you
wanted a device "M".Of course BASIC only loads BASIC files,not straight
(ML) programmes.And an EXE file is a PC format,not Atari.
You'll need to specify a DOS disk image (either a .ATR or .XFD file) on
the command line along with "MULE.COM".
(assuming that this is an actual Atari file)
A PC EXE file has the letters "MZ" at the beginning.A Atari programme file
has two inverse triangles pointing to the right when viewed on the Atari.
(by "inverse" I mean that they will be blue on white)
But the PC shows nothing for the beginning.(two blank spaces)
An actual PC COM file doesn't have anything special at the beginning,it's
just random.If you have a hex viewer on the PC,an Atari "COM" file starts
with "FF FF".An Atari BASIC file starts with "00 00".
(two white hearts on the Atari,probably invissible on the PC)

: So my question is, how do I load this program? Does this emulator
: really work or is it a waste of time? I read several different FAQs
: on this, none of which seem to contain basic OS commands. One of the

Their DUP commands,not OS.

: FAQs suggested that the READY prompt indicates that BASIC is running,
: and that I need to exit to DOS, using SHIFT-F10. When I press
: SHFT-F10, I get a letter "L" on the screen. When I type "DOS", I get

Weird,you must not be using PC Xformer.I use it.

: a screen with diagnostic stuff like memory test, which tells me to
: press SELECT, START, or RESET etc etc. I don't even know which keys
: correspond to SELECT, START etc.

That's what you get when there's no DOS in memory.
(or other boot programme like the term programme in a 1030 modem)
With Xformer,you type the name of the MYDOS disk image that came with it
(MYDOS45D.ATR or somesuch)

on the command line when you start it up along with any other Atari files
or disk images you want.You can have up to nine.
Then,use shift-F10 (after geting PC Xformer,if you don't have it) to
switch to non-BASIC mode (unlike other computers,you don't want BASIC
running/switched-in when running games.unless they are actually BASIC
games (duh!)),and use 1-9 to access the file directories,and "L" to load one.
You'll get a "NOT BINARY FILE" error if it's not a programme file.
BASIC will give you error#21 if you try to load a non-BASIC file.
I find that games seem to run better with 800 mode activated.
(press F12)
Of course you need Xformer 2.50 to be in anything BUT 800 mode.
(XF2.50 lets you emulate a 800XL as well.That's what you're in when you
start up)

: Please help if you can. If possible, please forward a copy of
your : response via e-mail.

: Thanks!

hello ... using not only MyDos but any DOS, requires writing the boot
sectors (1-3) a better solution for "installing" MyDOS in a disk is to
download the .DCM file form u-mich archives and use Diskcommunicator to
make a working copy.

Using your method, you are only copying the .sys files, not the boot
sectors.

one more time...anyone?

Where can I find an OS listing for the 800xl/ 130xe systems? I have the 400/800 Technical Notes Packets (Hardware, OS, etc...) but I'd like to see exactly what the xl/xe OS looks like (preferably with explanations of what has changed, and how to use the new features).

Also, somehow I ended up with a copy of Chapter 8 of some manual that is titled (Operating System). This chapter describes the 400/800 OS and has references to other chapters in the same manual. I want to find out what manual this is and would like to get ahold of this manual. I think Chapter 9 of this manual is "Disk Operating System".

Someone out there must know what manual this belongs to...and hopefully where I can obtain it!

Please help!

Cyrus

Hi !! I think that HTMLizing the ASCII text is a good option, so it can
distributed via WWW or as postcrip.

> Anyway, to answer your question, absolutely! Use the capture text mode
> (OCR) then save it in a format you can easily work with (like I used RTF

What program do you use ?, I tried Adobe photoshop more carefully and
there isn't any capture text mode .. and the scanner's software is only
the microtek calibrator.

Ok, this is the THIRD attempt to sell my good condition XF551 disk drive.

Make the following notes before you tell me you want to purchase it!

First: I live in CANADA, and shipping is going to be about $10 US to most US points.

Second: I only accept INTERNATIONAL money orders in US funds. This is not as difficult as some think. Merely go to the US POST OFFICE and ask for an International money order. Domestic postal money orders say "negotiable only in the USA". They should cost only slightly more than a domestic money order.

The price is $75 plus shipping. The drive will be shipped the day after I receive the money order. Please make sure you take your recipt or make note of the serial number of the money order, in case it does not arrive here. And, finally, don't tell me you want the drive, and then back out saying "oh, I didn't know you lived in Canada, and the price for shipping and an International money order is too high".....

A.B.B.U.C. is proud to present:

THE "JAHRESHAUPTVERSAMMLUNG" No. 11

Atari Bit Byter User Club the international computer club for the 8-
Bit ATARIs with more than 550 members holds its annual general meeting.

Everyone who is interested in classic ATARIs is invited.

There are several dealers/persons who sell used/new stuff for our
favourite 400/600/800/XL/XEs for example:

- KE Soft (famous developer of games software - remember G.U.L.P.?) is
presenting its new programs
- FTE(US) and ANG (a new generation software / Netherlands) are probably
there showing their variety of products
- A german developer is presenting an IDE-harddiskinterface for the XLs.
- PD library
- Users show their power computers, e.g. 1 megabyte ram, STEREO with a
second POKEY, RS232C interfaces, realtimeclocks etc. etc.
- flea market

location:

D - 45699 Herten (germany)
Buergerhaus Herten Sued
Ewaldstr.

beginning: 13.00 on october 26th (saturday) this year (1996)

It probably would have been easier for them to write ports than an
emulator. The emulator gets you absolutely perfect copies of the games,
however, which is very hard to do with a port. And the whole point of the
exercise is to get those perfect copies; who wants to play something like
River Raid if it isn't exactly how you remembered it on the 2600?

Actually there was one thing which was WAY less responsive. The interface graphics drew lightning fast, *but* the system would take about a half-second to recognize that you clicked the mouse. This is because GEM checks for double clicks by simply waiting for a timeout period; during that time the single click isn't registered. And if you moved the mouse before the click was registered by the system, the click would take place at the new mouse cursor location rather than where you actually clicked.

It always irritated me to no end that there were silly little brain-dead things like that in GEM that Atari never fixed. :-) That's the story of Atari -- come out with cool stuff and then don't support it until it dies.

Looking to purchase a good, clean 1050 disk drive case. Dont really need
the internals, as I'm going to be mounting a Syquest 44meg SCSI removable
in the case.

Please respond.

Thanks.

2139. Geezer 8-bitter needs help!

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-19 00:00:00 UTC
From: zmerch@northernway.net
Message-ID: <MPLANET.3240c9efzmerch98968c@news.northernway.net>
Source record: 80450

Hello all out in Atari 8-bit land, and a pleasure to meet you all!
I hail from Tandy 8-bit country (CoCo's me expertise) but had an ancient
800 in the basement and figured it must be a good machine!

Well, it is! I had a plotter/printer for it (just like my CoCo's!) but no
disk drives (the 810 that came with it died a humane death, at least...)

I just purchased 2 disk drives for the 800, happy as anything when they
came in, reconditioned the drives and everything, dug way down deep and
found everything, dusted off the 800, finally got all the keys to unstick
(it was *really* dusty), got the 800 working, and......

nothing. :-(

My 800 is not recognizing the SIO port! It sees memory fine, swapped
cartridges like crazy, cleaned the pins on the SIO ports on the 800, the
disk drive, and my plotter, swapped 4 (count'em, 4) SIO cables, and still
nothing. <sniff> Everything else works fine, but no peripherals...

Does *anybody* have any ideas on how to fix my poor 800? It seems like
much too good a machine to toss!

Any advice is most appreciated, and thank you very much in advance for
anything y'all smart folks could help me with!

I check this newsgroup every 3 days or so, but best bet is to email me at
the address below.

Thanks again!

No Frogger was not. I thought I was the only one who remembered this system.
There were only a few games. Hard to remember, but I remember one which
was pretty much the first role-playing adventure type game. Was pretty cool
if I remember, at least for a 2600... The tapes had to load in..... Would be cool
if someone were to convert them over. I could probably do it if I had the cart and
cassettes...

Yep, they recorded BASIC or ML programs on one channel, and an audio track on another. The speed was kind of slow by today's standards, but if you could have program loading while narration was going on, it wasn't too bad for the less-demanding folks of that era. The Halley Project, which my son enjoyed playing for a time, had an audio tape that was played prior to running the program -- a la Mission Impossible -- and it, too, used that audio line in the SIO.

I think the object of all this was to make it as quick and simple
as possible. The original message never mentioned a disk drive being
connected to save more complex programs than the one I posted last
week. Of course you can make it pretty. Back space can be handled as
can word wrap, screen scrolling and caps/lower case text, but KISS is
the thing in this case. Get the info on the screen with the least code
to type in.

Enjoy!!!

Did you chech to disk drive to be sure that it is set as drive 1?
You didn't mention which drives you purchased. The 810 and 1050 need
both the black and white switches set to the left. If it is an XF551
both switches need to be up. This makes that drive assigned to D1:. D1:
is required to boot from. You also need a boot disk that containg DOS.
Take your choice. AtariDOS 2.x (AtariDOS XE might not work on the 800

and DOS3.0 is not recommended), MyDOS 5.4x, (or my favorite) SpartaDOS X cart. Sparta disk versions won't work on an 800. There is also SuperDOS.

I can't help but be deeply disturbed by the end of Atari. Yes it
really hasn't been a 'force' in the entertainment or home computer
market for ten years but...I had my 400 when I was 16 and then I
AT&F&A3&B1&H1&R2X4S0=0S7=90
thought it was the K00lest thing ever that I
could play my Rush
cassettes through the cassette drive while playing a game. God Bless
that nastyNolan Bushnell (ever see the pic of him with the two
scantily clad Cali girls in a hottub?).

Hola ...
Existe un cable que puedes construir para este proposito, sin embargo no
lo he construido, asi que no puedo decirte que tan rapido o lento
trabaja, puedes ver informacion sobre este cable (sio2pc) en

http://www.nacs.net/~classics/
o checa el FAQ de atari en
http://www.cs.ruu.nl/wais/html/na-dir/atari-8-bit/faq.html

2149. Two disks

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-19 00:00:00 UTC
From: pab@cnx.com
Message-ID: <5e3_9609191511@cnx.com>
Source record: 80460

I thought these were lost forever, but perhaps there is hope.

I hold here in my hands two 5-1/4 disks. One is apparently SpartaDOS format, the other is AtariDOS format. On them is much of my ACTION! sorce code, incuding, apparently, the source code to PabQwk 2.0.

My 1050 was sputtering in those final days, so there may be errors that have crept in, but if there is someone out there who is willing, I would consent to turn it all over to him or her.

You'll need SpartaDOS, preferably SpartaDOS X, which I developed it under, since part of the process is a "MAKEPQ" batch command, which will build the final product out of a "PQDATA" file with the display lists strings and assorted stuff and the compiled ACTION! code. I don't know if my Runtime Library is included on there; if not, you'll need ACTION! runtime.

If there is an ACTION! programmer left out there who is worth his salt, I'm willing to turn over the disks with the proviso that you release all the programs on them, and any future developments from them, to the Public Domain. Also, until a new PD version of PabQwk can be developed, there is a key generator on the disk to allow all the Shareware versions' features to be activated.

If you're willing to undertake the task, please E-Mail me at pab@cnx.com, since I don't read this newsgroup any more.

2150. Syquest 44meg formatted on BB -- needed on MIO

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-19 00:00:00 UTC
From: James King <jeking@xmission.com>
Message-ID: <01bba652$2af2b9a0$0c88e4cc@jamesk95>
Source record: 80461

I have a black box on my primary Atari 8bit system. On that system is a 44meg Syquest removable hard drive. I just purchased a second 44meg Syquest and put it on a secondary Atari, but that Atari accesses the Syquest via an MIO.

Without having to reformat my BB hard drives and switching to MIO compatibility mode, is there any other way to share data between the two systems via the Syquest carts?

> cable and the switch box. Many thanks!

Any phono cable with two jacks at each end can be used as a RF cable and switch boxes are still being sold at Radio Shack. Of course, as long as you don't have any other system or cable TV, you can just get an adapter with lets you hook up a phono cable to a 75 Ohm antenna on your TV. Just ask for a phono female to coaxial mail connector. I use those and an A/B switchbox for my 130XE and 2600. Hope this helps...

I never even heard of Starpath games for the 8-bit computer. Even if
their were, chances are that they can be used with the 410 cassette
player instead of using a special adapter which the 2600 needed.

> if someone were to convert them over. I could probably do it if I had

From: MIS0160@MVS.UDEL.EDU
Message-ID: <19960919210548MIS0160@MVS.UDEL.EDU>
Source record: 80466

Having been into the IBM scene the last few years and desiring shelf
space in my basement, I have the following for sale.

A.N.A.L.O.G Magazine - Complete collection from issue #9 to #79 (the
final issue) $25 plus shipping

ANTIC Magazine - Fairly complete collection from Vol 1 #3 (Aug 82)
thru May 91 (missing a couple issues) $50 plus shipping

COMPUTE Magazine - Complete collection Jan 83 thru Apr 88 when they
stopped publishing type-in programs $30 plus shipping

Atari Memorabilia Archive - Original sales literature for Atari 400, 800
800XL, several Atari Program Exchange
Catalogs, lots of rare Atari stuff
$35 plus shipping

Books: Sams Programmer Reference Guide for Atari 400/800
Hackerbook for your Atari Computer
How to Program your Atari in Machine Language
Atari Roots
Assembly Language Programming for the Atari Computers
Atari Assembly Language Programmers Guide
De Re Atari
Mapping the Atari
The Atari Compendium
Atari 8-bit Extra from Analog Computing
(plus several others)
All for $60 plus shipping

Hardware: Omnimon and Omniview Boards for Atari 800 $20 plus shipping

If you want the whole kit and kaboodle, I'll take $200 plus shipping.
The magazines are fairly heavy and would be shipped the most economical
way. Shipping would be from Delaware.

Actually, it was changed FROM Arcadia TO Starpath. And they changed the name
so they wouldn't get sued by Emerson, maker of the Arcadia 2001 videogame
system.

> >The only one I think is "Frogger" (That was a supercharger game, was it

Roger,

Since your 800 was stored for a long time, maybe you should remove the
case and clean the pins on the circuit boards. The 800 has a connector

between the mother board and power supply board (where the SIO connector is located). A soft pencil erasor may be used to remove tarnish from connector pins. Wipe the pins with alcohol after using the erasor. The erasor may be used on card edge pins too. Don't scrub too hard. You don't want to remove the plating, just tarnish. It'd also be a good time to vacuum dust out of the machine's interior.

Most new TV sets have a screw-on "F" type connector to connect to an antenna, cable, or VCR. Radio Shack sells adaptors to go from that type of connector to an RCA plug, and switchboxes.

: Enjoy!!!

: rely@ix.netcom.com -or- rsely@dhs.state.nj.us

That was my point.Why open K: and translate returns into clear-screens?
The Atari OS has all you need:

```
10 GR.2:DIM Q$(160)
20 I.Q$:?#6;Q$:G.20
```

.
I made it 160 becuase there's four text lines.
Also:GR.2 may be a little TOO big!
(try GR.1)

There is a minor problem with this. If you don't clear the screen,
after you fill the screen, you'll get an error 141 at line 20. I just
tested this. Using get/put allows you to put the text directly into the
GR.2/Gr.1 screen. Heck, you could even poke the characters directly to
screen memory. Anyway, I just wanted to help this guy communicate with
his wife. I hope I accomplished this.

Enjoy!!!

In article <51aivj$h1g@charm.magnus.acs.ohio-state.edu>,
msteve@magnus.acs.ohio-state.edu (Michael Steve) writes:

>Found a neat little (well shown actually) article about Atari in the
>October 1996 issue of Wired magazine. It basically goes through a brief
>history of Atari when it started "From $500 to $452 Million and back
again."

Yes, the article was interesting. But I just picked up a news article
yesterday (Joseph Gelmis in Long Island Newsday) about
"thought-controlled" games. The series is called MindDrive. There's a
package coming out soon for PC's consisting of a $140-150 plastic sensor
ring and a converter that plugs into the PC's serial port. The package
works under Windows. The ring detects the same kind of bioelectric
signals as a lie-detector would, and allows the user to control a
CD-ROM-based game. There are ten games (six available now) in the
series, selling for $25-40 each. The one that is featured in the news
article is called
"MindSkier," and requires you to control a skier on a slalom course.

Now, here's the interesting tidbit. MindDrive, it turns out, was
developed by a company called "The Other 90% Technologies, Inc." This
company was headed by Ron Gordon, who ran Atari Games in the 1970's, and
then went on to Miramax Films. So, here's another instance of Atari
alumni contributing big-time to the industry (yes, I know he was at Atari
GAMES!)

BTW, a device like this has implications for more than games (think
adaptive technology, for example.)

It's only crap if it doesn't run your favorite program. But the programs that do work run faster than lighting on Pentiums. So if you want to create something for a Pentium machine with an Atari 8 bit "look and feel", Xformer can be a nice program. If games are your thing, there are quite a few that work. Joust is one I like.
There's a newer version coming out, 3.6 I think. I hope it takes care of the bug that interferes with the display list half way down the screen on some programs. Sound emulation might take a lot more work than Emulators, Inc. can justify from a dollars standpoint though. I look forward to seeing the future of this product.

2169. Help I Need an AF551 Disk Drive

Newsgroup: comp.sys.atari.8bit

Has any one got a AF551 Disk Drive or any Disk Drive that will work with an old Atari 800XL, that I can buy off of you. Or is there any place that service/ sales these kinds of things.

Please Email as I don't hit this group very often

Thanks.....NorvMan
Norvell..and.. Cecily... Maples

..... major snip .....

That's the rub ... it only runs about 5% of Atari programs ... maybe 25 to
30% will run somewhat shakey with bugs ... the rest won't run at all.

This P.O.S. software should be listed as Xformer beta 0.35 ... not v 3.5!!!
(sorry .. but it's the truth .. just ask any sucker who's laid out cash
for the program and then has gotten kicked in the teeth by the Author of
this program)

Don't you mean an "XF-551" disk drive? Never heard of an "AF551" drive.

Hmmm, do you have to eat it if your program doesn't work? If so, want some fries with that?

Because Graphics 2 is a screen mode, not an editor mode (except for the four lines of Gr.0 on the bottom), your program only outputs to the four lines on the bottom, with nothing in the GR.2 area. Poke 87,0 just moves the margin to the far left of the GR.0 area.

2174. FS/T: Atari 8-bit computer items [09/20/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-20 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <51v09s$nfb@sjx-ixn6.ix.netcom.com>
Source record: 80387

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 09/16/96

NOTE: There are currently 955 ORIGINAL game screen shots available on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories for sale or trade.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be given priority (especially if the trade offer overwhelms me). I collect for over 40 different systems, so please feel free to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted.

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 5.50 Atariwriter
$ 4.50 Basic -- for the 400 and 800
$ 5.50 Basketball
$ 9.50 Delta Drawing (Spinnaker)
$ 7.00 Deluxe Invaders (Roklan)
$ 9.50 Jumbo Jet Pilot (Thorn EMI)
$ 9.50 Kids on Keys (Spinnaker)
$ 4.50 Pac-Man
$ 9.50 River Raid (Activision)
$ 4.50 Star Raiders

Cartridges with case and manual:
$14.50 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers -- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers (14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3 (100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog (32 pages).
$ 9.00 Inside Atari BASIC [Atari / Reston] (183 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$42.00

*****

LOT #2

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex connector cable.

$32.00

*****

LOT #3

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex connector cable.

This item has not been tested.

$ 6.00

*****

LOT #4

ATARI 820 PRINTER, with one (1) roll of paper and built-in power cord.

This item has not been tested.

$17.00

*****

LOT #5

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$21.00

*****

To reserve an item listed here, please contact me.

Please include a list of the items that you are interested in,
and your full postal mailing address. Thank you!

Sure? IIRC, the left margin is set in location 82 (as in POKE 82,0
or POKE 82,2). Of course, I've been wrong before :)

It's not surprising considering that Atari was 'about' to come out with a
MindLink control. Come to think of it, 'mind-reading controlers' also
came out in the early 80's with a biopad(I think) for the Apple computer
and even one for a RC toy called Mind Master.

Say, wouldn't that ring be also cool if it can be a mouse as well since
it plugs in the serial port? :)

Everything old is new again with...

That's why most people decided against posting this version. Most
thoughts cannot be expressed in 38 characters.

I would like to reiterate the importance of testing these programs before
posting them, as I did with my version.

BTW..

I'm not a defender (paid or unpaid, honest!) of Darek Mihocka, but it is a fact that he stated that as a software publisher, he cannot have his emulators running copy-protected software. I have to respect that position.

On the other hand, Xformer has printer support. The developers of XL-It, POKEY and Rainbow 95 probably have that feature low on their list of priorities for future upgrades.

I guess the choice of an emulator depends on what task you want it to accomplish.

My advice : get, try and support all of them.

I suspect that if you're going to want to share all the carts between both
machines then they're all going to have to be formatted with the appropriate
BB DIP switch in MIO compatibility mode. Certainly your BB will have no
problem reading carts in either format but that's not true the other way
around.

I have the same problem with my floppy board. When you format a floppy you
can pick one of three formatting methods for double-sided disks. I always
choose Percom since my only stand-alone floppy drive is a DS/DD Percom
RFD-44S1 - it's the only way I can ensure my floppies (at least, side 2 of
my floppies) can be read anywhere.

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for
Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST
HardWare, SoftWare, Books and Accessories. For the last couple of weeks
BSC has received a Half Dozen deliveries of Atari Stock. And in BSC's
Catalogs, you may find something you've been looking. At BSC's Web Page
you'll View, & DownLoad Catalogs or Contact BSC by Web Page! Or Request
Catalogs by E-Mail. Have problems connecting with BSC's web page? Feel
free to Request catalogs through E-Mail. Really, it's no inconvenience.
All I ask is that you specify Atari 8 Bit, Atari ST or both. I'll get
back to you after the weekend. Catalogs are sent only by E-Mail. Please
Direct any and all Replies Through E-Mail to bensmith@teleport.com.
--
Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974.
Catalogs Requested by & Received Through E-Mail! Specify Classic 8 Bit or ST.

I'm looking for an Atari User named Sloopy Malibu. He's been an Atarian
for a Long time. He even used to write articles for Atari Magazines. I
Remember one in AIM Magazine. I have some unfinished Business with Him.
We were in the middle of a Trade and after I received my part of the
Trade, I lost touch with him. And I still need to complete the Trade.
If anyone can help... An E-Mail Address, a Phone Number. Direct any and
all Replies through E-Mail to: bensmith@teleport.com

==Thanx==

Don't hold your breath ... you are most likely to get an inflamatory
msg mailed back to you, rather than an upgrade .. or perhaps you'll be
"removed from the official registered user list", as I was!

Bill .. Officially removed as a registered user of Xformer by the
author (Mr. Mihocka), because I dared ask for an upgrade.

Atari demoed a mind controlled 'joystick' and games back in the early
eighties.

Actually, it's POKE 82,0 to change the margin. The Revised version is this:

GRAPHICS 18:POKE 87,0

(or use GR.17 for more text on screen)

Change it to GR. 17 or GR. 18.
Of course, this isn't perfect either. There's no cursor, and you can get
lost off screen. But that one-liner could be used as part of a simple
program.

I bought v3.01 and v3.5, both are limited in sound and compatibility. Some things work, some does not. Forget about Spartados. Was I disappointed, well I am hoping for a FREE upgrade that will correct things. It is fast!

Atari demoed a mind controlled 'joystick' and games back in the early
eighties.

: > So he said, *gcc* (not the generated application) takes much memory,
: > and it's a memory tester *for the PC* (not for the destination
: > hardware (6502)).

: Since it was me who wrote the quoted paragraph: yes, you're right.
: What I meant was the unfeasibility of a _native_ 6502 gcc.
: A 6502-_targeted_ gcc might well be possible (you better use short
: for int though...)

: > gcc really generates very tight code if you let it optimize (-O, -O2,
: > or higher). If you want to see, what gcc generates, use the -S option
: > and look at the assembler code.

: Voila, for the Hello World example, here's the 386 code from gcc:

: .file "hello.c"
: gcc2_compiled.:
: ___gnu_compiled_c:
: .text
: LC0:
: .ascii "Hello world\12\0"
: .align 4
: .globl _main
: _main:
: call ___main
: pushl $LC0
: call _printf
: addl $4,%esp
: ret

: That's the whole program. Don't count the "administrative" stuff (the
: empty symbols and ___main call) and you haven't left much to take out.
: :-) If the linker makes this into 100k, you likely have no shared libs
: or aren't using them.

I noticed that when I upgraded to ELF that anything I compiled was huge.
It's becuase that the "N" flag,which previously let you turn off the page
alingment (letting a tiny programme take up less than 8k),now cause a
static linking.
If you have this problem,look for "-N" in the "LDFLAGS" part of your makefile.
```

: > of symbol table stuff in there.

: Wow! 'Only' 40K. And that leaves nearly 24K for doing something
: *and* printing the result.

How does it "leave" 24k???
The whole printf routine is linked in to the executable.This includes code
for several different conversions.So even thought you use it to convert a
number to text,it still takes up as much room.
There's also the start-up code.
(on Linux,both of these are kept in a seperate "library" file that all
programmes access)

Elvis Smurf (esmurf@ibm.net) wrote:
: having difficulty getting an .atr image created with imageman to be
: recognized by the atari when mounted through APE shareware. APE crashes
: with a runtime error if the .atr image is empty (unformatted?).

I thought that APE was a sector-by-sector deal.So it doesn't matter
what's on the disk.

: furthermore, i cant seem to format ANY image created with imageman,
: imagic95, or ape. i get error 139, 138.

Of course you can't format them,they're not real disks.
(and IDE hard disks can't be formatted at all,so forget about formatting
the sectors containing the disk image file)

: my goal is to move some of the single program files obtained from the
: archives into an .atr file, thus allowing me to use them on my 800 xl
: through APE.

: are there any other utilities out there? am i missing somehting
: obvious?

If you just want to re-build the file system on a disk use the "N" option
of MyDOS {

I
1/N

}.it'll ask you for confirmation.You can type "A" but then it will format as
well as building the empty directory and VTOC.
(I even tried it from BASIC using XIO,to no avail)

Also:If you use Imageman to create a enhanced (double density,128-byte
sector) disk image (the closest you'll get to "formating"),it will be for
AtariDOS,not MyDOS.MyDOS can only really handle AtariDOS disks with 720
sectors.Enhanced disks have 1040.MyDOS will think that it's a 720 sector disk.
(or,more to the point,that it only has 720 sectors free,or somesuch)
Just run "VTOCFIX" on it.It'll rebuild the VTOC (the list of free sectors).
One thing;when it asks you if the disk has 720 sectors,answer no and put
the real number(1040).Obviously this will go a lot faster if you run
VTOCFIX before you put any files on the "disk".

: How about bopping into DOS, doing a (K) binary save,
: LOGO.BIN,8000,BFFF and PILOT.BIN,8000,BFFF, and u/l them somewhere?
: So other people can use them?

Well,he Atari will not recognize the binary loaded cartridges it self,
so you'll have to run the cartridge manualy.

$BFFA (in the cartridge) contains the run address of the cartridge.
(remember,the low byte comes first and then the high byte.So run address
$A000 would look like $00A0 in a memory dump)
And $BFFE is the init address.
$BFFD contains some option bits.
bit0 means boot the disk (that's why BASIC boots DOS but not games)
bit2 init and run cart.(or else it just inits it)
bit7 was for diagnostic cartridges.The OS wouldn't init itself.

I think it's really funny when people jump in on these discussions...

"Oh sure, you can run gcc on anything!! What's the address space?"

"64k"

"Errr...well, I guess clever use of overlays could help with that...how wide are the
registers?"

"8 bits"

"Well, I guess you could hack the SImode and the HImode to be the same as the QImode...how
many
of these 8 bit registers are there?"

"3 of them"

"Well, I guess that makes register allocation difficult...the registers are all equivalent
yes?"

"Uhhh, no"

"Well I guess you could be really clever in the machine description...how big is the stack?"

"256 bytes"

(long pause) ... "Have you considered buying another machine?"

Hello Bernard! Glad to see you back. Hope the Pro! nets are going well for everyone over there. Unfortunately, here in the U.S., they are moribund. At least they were down to 4 or 5 participants before the Iron Horse went down. There are more than just 4 or 5 Pro! BBSes still operating, but most do not network. The Atari spirit has died in the U.S. The newbies are mostly emulator users.

P.S. - The Iron Horse went down because of equipment malfunction and not because Mario wanted it to.

Just picked up a grime-covered XE game system with light gun and keyboard (for $2!). It came with two carts: BugHunt and Flight Sim 2. Anyway, after cleaning it up a bit, I could only get it to play my standard 8-bit computer carts and neither one of the XE carts would work. Finally, after cleaning them real good AND plugging in the keyboard, I got both to work.

Here's the weird thing though: when I was trying to get BugHunt to work (pulling it out and putting it back in several times, blowing on it, cleaning it, jostling it while plugged in..you know the routine) I at one point got the opening screen for Missile Command!! What's up with this? Is Missile Command built into the XE system? If so, I couldn't get it to return with no cart plugged in, or was Missile Command also included on the BugHunt cart? Anyone else had this happen?

One other thing: BugHunt is always monochrome (green and black). Is it always like this or can you get color?

Quick question. What type of hardware do you need to build a interface cable that conneects to the 1050 drive and the IBM? And also, does the interface cable hook up to the serial or printer port(IBM).
Thank You,
Randy

Yep, Missile Command is built-in. If the keyboard is plugged in, and
you turn on the system without a cart, you get basic. If the keyboard
isn't plugged in, you get Missile Command.
Maybe the time MC came up, your keyboard connection was loose/bad/not
recognized.

Maybe all of the above is wrong, but that's what I remember.

>One other thing: BugHunt is always monochrome (green and black). Is it
>always like this or can you get color?

Isn't green and black enough for you? :) [Yep, that's all there is.]

David Bennett (sunlord@zot.io.org) wrote:
:
: I currently have APE, a 1050 and an XF551. I have all the different
: DOS's on disk. I am wondering what other programs I need to run a
: succesful system. I have seen many notes regarding something called
: a 'Boot menu loader' and programs such as this. Can anyone suggest
: programs that could be useful to the everyday operation of my atari?

A boot menu loader is simply a tiny program which sits on the boot sectors
of your disk. They know a little bit about reading a disk directory and
how to do a "binary-load".

They're used to replace DOS. Most games don't need to know how to do
lots of DOS commands (like "delete", "rename", etc.), so why bother loading it
up?

Also, the nearly instant speed you get with a boot loader (versus first loading
DOS, then the DOS interface (menu, command line, whatever)) is pretty nice
as well. :)

The only boot loader installer that >I< personally know of is "Chaos Loader."
I know for a fact there are a few others you can use, too.

Finally, remember, they aren't a replacement for a DOS. They're just a
replacement for a DOS on a game disk. (Got a disk full of .COM or .EXE
games? Use a boot menu to speed the access!)

: (Which DOS should I use? How do I run bootable programs without
: turning on and off the cpu while holding option? SpartaDOS reads
: MYDOS, But mydos doesnt read Sparta.. does that make it better? etc
: etc.)

DOS to use: My suggestion is MyDOS. Compatibility AND features, versus
slight incompatibility and TONS of features. They both have
subdirectories, they both have RAMdisk support, etc. MyDOS is a menu
(yay!), SpartaDOS is a command line interpreter (cool! (harder to learn)).
SpartaDOS has time/date stamping (a MUST for BBS Sysops!). MyDOS doesn't.
MyDOS is VERY Compatible. SpartaDOS isn't (relatively speaking...)

To boot a disk w/o turning your machine on and off, you can simply reboot
it (warm-boot (vs. the "off/on" 'cold boot')). In Atari DOS or MyDOS,
do a [R]un at address:
E477 (that's hex for 58487)

********** NOW RELEASED **********

The More Than Games Flyer UPDATE 1996-A
Many more items for Atari 8 and ST. With things for Apple II & Commodore.

300 items not in the last flyer. Almost 1100 pieces.
Now with a Portfolio Public Domain/Shareware library.
We've added almost 500 more magazines.

You can request any of the following:

*) MTG Flyer(94)- 40K each, 637 lines.
*) Games(2600, 5200, etc.) List- 5K, 67 lines.
*) Magazines List- 18K(due end of Sep 96), about 200 lines.
*) 1996 Update(all systems)- 40K, 538 lines.

Specify list(s) and whether you want ASCII or A8 Atari format,
and your email address, or postal address if you want a printed
version.
Also, let me know if you are no longer interested in Atari stuff.
Email to:74766.1561@compuserve.com.

Sure they do. That's why there are all these "Windows accellerator" graphics
cards. <EG>

Seriously, though - imagine a machine with the raw horsepower of the P6/200
and the video processing handled by a dedicated, graphics-optimized CPU.
Seems to me that designing a machine to get the best possible performance
means optimizing each portion for maximum performance - the CPU for handling
coordination and number crunching, seperate video processing, I/O processing,
data storage, user interface... Hmmm, I think I just described an Atari
Falcon with the 040 upgrade.

That is, to coin a phrase, just a crock. Sound emulation is far easier than video mode emulation; XL-it! uses .WAV files and does a good job with sound. Shoot, even on my ST, I have a couple of sound players that convert audio files to the desired format and sample rate on the fly, while playing them. The Intel machines should be able to handle such emulation and conversion far more easily, since they are designed primarily to crunch numbers ratehr than as general-purpose processors.

I thought that APE was a sector-by-sector deal.So it doesn't matter
what's on the disk.

: furthermore, i cant seem to format ANY image created with imageman,
: imagic95, or ape. i get error 139, 138.

Of course you can't format them,they're not real disks.
(and IDE hard disks can't be formatted at all,so forget about formatting
the sectors containing the disk image file)

: my goal is to move some of the single program files obtained from the
: archives into an .atr file, thus allowing me to use them on my 800 xl
: through APE.

: are there any other utilities out there? am i missing somehting
: obvious?

If you just want to re-build the file system on a disk use the "N" option
of MyDOS {

I
1/N

}.it'll ask you for confirmation.You can type "A" but then it will format as
well as building the empty directory and VTOC.
(I even tried it from BASIC using XIO,to no avail)

Also:If you use Imageman to create a enhanced (double density,128-byte
sector) disk image (the closest you'll get to "formating"),it will be for
AtariDOS,not MyDOS.MyDOS can only really handle AtariDOS disks with 720
sectors.Enhanced disks have 1040.MyDOS will think that it's a 720 sector disk.
(or,more to the point,that it only has 720 sectors free,or somesuch)
Just run "VTOCFIX" on it.It'll rebuild the VTOC (the list of free sectors).
One thing;when it asks you if the disk has 720 sectors,answer no and put
the real number(1040).Obviously this will go a lot faster if you run
VTOCFIX before you put any files on the "disk".

: > and it's a memory tester *for the PC* (not for the destination
: > hardware (6502)).

: Since it was me who wrote the quoted paragraph: yes, you're right.
: What I meant was the unfeasibility of a _native_ 6502 gcc.
: A 6502-_targeted_ gcc might well be possible (you better use short
: for int though...)

: > gcc really generates very tight code if you let it optimize (-O, -O2,
: > or higher). If you want to see, what gcc generates, use the -S option
: > and look at the assembler code.

: Voila, for the Hello World example, here's the 386 code from gcc:

```
: .file "hello.c"
: gcc2_compiled.:
: ___gnu_compiled_c:
: .text
: LC0:
: .ascii "Hello world\12\0"
: .align 4
: .globl _main
: _main:
: call ___main
: pushl $LC0
: call _printf
: addl $4,%esp
: ret
```

: That's the whole program. Don't count the "administrative" stuff (the
: empty symbols and ___main call) and you haven't left much to take out.
: :-) If the linker makes this into 100k, you likely have no shared libs
: or aren't using them.

I noticed that when I upgraded to ELF that anything I compiled was huge.
It's becuase that the "N" flag,which previously let you turn off the page
alingment (letting a tiny programme take up less than 8k),now cause a

static linking.
If you have this problem,look for "-N" in the "LDFLAGS" part of your makefile.

On the other hand, Rainbow (and I think some of the other emulators) can
run Cartridge ROM images. I was able to do this with most of my carts and
they work great! I wouldn't mind getting my hands on Logo in this form. I
used to have it, but it's disappeared. I still have all the docs (mine
came with 2 copies of the manuals for some reason) and the box.

2238. BASIC XL ROM image?

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-22 00:00:00 UTC
From: marksim@bitstream.net
Message-ID: <marksim-2209962127510001@port1.bitstream.net>
Source record: 80354

A couple months ago there was some discussion about how to extract the ROM image from a BASIC XL cart for use with Rainbow. Has anyone done this successfully?

After reading through notes from Chris Lam and Bill Wilkinson's discussion about supercarts here, I thought I figured out a way to do this without programming using something like this:

Start up with BASIC XL, go to DOS, choose option K using:
<dummy filename>,D501,D501
This should enable the cart with bank 1 selected (any read/write to D501 supposedly will do this)
Write the cart address space to disk using option K again:
BASICXL1,A000,BFFF
Repeat procedure for D502 (to select bank 2) and D503 (to select bank 3), writing the ROMs to disk each time.
Finally, transfer the files to my Mac and stitch them together.

Well, it didn't work. Is there some reason why this shouldn't work? Chris's suggestion was to write a short assembly language program to switch in the banks one at a time, copy the ROMs to a different area in RAM, and then switch to DOS and write that area out to disk. I thought I figured out a short cut...:-(

And it works, eh?

Didn't Tail of Beta Lyrae use display lists to do the really fast
page flipping used to superimpose text over the title graphics?
Just use that jump instruction in the display list to jump to another
display list, I think. (I used to wonder what that was for, I figured
out 2-F by poking the display list and seeing what happened.)

This kind of thing was probably borrowed by Amiga technology to do those
famed interlaced screens that everyone in the 90's loves to hate.

though I don't have the Atari 8-bit emulator for the Amiga (which claims
to be compiled from Unix), I'd like to know if it runs on an ECS Amiga,
and if it takes advantage of copper lists and all that cool stuff?

: David Bennett (sunlord@zot.io.org) wrote:
: :
: : I currently have APE, a 1050 and an XF551. I have all the different
: : DOS's on disk. I am wondering what other programs I need to run a
: : succesful system. I have seen many notes regarding something called
: : a 'Boot menu loader' and programs such as this. Can anyone suggest
: : programs that could be useful to the everyday operation of my atari?

: A boot menu loader is simply a tiny program which sits on the boot sectors
: of your disk. They know a little bit about reading a disk directory and
: how to do a "binary-load".

: They're used to replace DOS. Most games don't need to know how to do
: lots of DOS commands (like "delete", "rename", etc.), so why bother loading it
: up?

Remember,you won't be able to save your game if the game saves the game in
a file rather than certain sectors.
(Eastern Front 1941 and et cetera also let you use C: (tape drive))

: Also, the nearly instant speed you get with a boot loader (versus first loading
: DOS, then the DOS interface (menu, command line, whatever)) is pretty nice
: as well. :)

: The only boot loader installer that >I< personally know of is "Chaos Loader."
: I know for a fact there are a few others you can use, too.

: Finally, remember, they aren't a replacement for a DOS. They're just a
: replacement for a DOS on a game disk. (Got a disk full of .COM or .EXE
: games? Use a boot menu to speed the access!)

: : (Which DOS should I use? How do I run bootable programs without
: : turning on and off the cpu while holding option? SpartaDOS reads
: : MYDOS, But mydos doesnt read Sparta.. does that make it better? etc
: : etc.)

: DOS to use: My suggestion is MyDOS. Compatibility AND features, versus
: slight incompatibility and TONS of features. They both have
: subdirectories, they both have RAMdisk support, etc. MyDOS is a menu
: (yay!), SpartaDOS is a command line interpreter (cool! (harder to learn)).
: SpartaDOS has time/date stamping (a MUST for BBS Sysops!). MyDOS doesn't.
: MyDOS is VERY Compatible. SpartaDOS isn't (relatively speaking...)

: To boot a disk w/o turning your machine on and off, you can simply reboot
: it (warm-boot (vs. the "off/on" 'cold boot')). In Atari DOS or MyDOS,
: do a [R]un at address:

: E477 (that's hex for 58487)

For me, as long as Atari BASIC works, I'm almost happy. SD would be
wonderful and BASIC XE would make it perfect for me. I don't do any
sound on the emulator, although I do on the real 130XE. I don't do
games, well, rarely on the 130XE. So far most of my BASIC stuff has
worked. I have to convert my BXE/BXL programs back to AtariBASIC to get
them working. It does what I need it for with the above exceptions. I
think there is a guy local to me that is working on a way to use SD
3.2d with the it, but there are complications that are in SD that make
it difficult.

The only other thing you could do is to use a real 800 computer.
You could probably find a used working one in this newsgroup. Just ask
around. That would be much better than using the translator, especially
for carts.

It's two colors. The other two only show up because of the limited resolution
of the TV screen. If you use a high-quality monitor, you won't get those
extra colors.

OK, step one: Use an Eprom Burner to copy the 400/800 OS.

Step Two: Burn a 27128 with the 400/800 OS.

Step three: Add a switch between the XL OS and your EPROM.

Or, just buy the CSS UltraSpeed OS, which gives standard XL, Fast XL,
and 400/800 OSes all in one.

Ok, Missile Command is a built-in game without any cart or keyboard
plugged in. My guess is that you didn't put the cart in right and the
'game' came up. Had you had a keyboard then you would have Basic, this
happens to me a few times.

> : Yep, Missile Command is built-in. If the keyboard is plugged in, and

One quick point, Antic came out with a cool type-in program called XEGS
Manager which can not only turn Basic on and off, do Pokes from DOS, and
mess with the ROM font but also let you play Missile Command. This
feature is only availbile on the XEGS but the others will work on any
XL/XE computer. :)

Well, here's the structure from it, taken out of ACE
(the Atari Computer Emulator)

```
struct sio2pc_image_hdr {
byte code_lo, code_hi; /* ID code = 0x0296 */
byte size_b1, size_b2; /* low 16-bits of size */
byte secsize_lo, secsize_hi; /* sectors size: 128/256 */
byte size_b3, size_b4; /* high 16-bits of size (paragraphs) */
byte resv[6]; /* reserved */
byte numerr_hi, numerr_lo; /* number of sectors with errors */
};

struct errormap {
byte sec_lo, sec_hi; /* sector with error */
byte cstat; /* communication status */
byte hstat; /* hardware status */
byte resv[4]; /* reserved */
};
```

Note that the size (which is stored in size_b1 through size_b4)
is in paragraphs, or multiples of 16. Thus, take the total number
of sectors, multiply by the sector size, and divide by 16, then store
this result across those four bytes.
(Actually, I might have added bytes 3 and 4 to it.... or someone
else might have already. I can't remember now)

Note that the errormap was an extension I added, but I'd like
to see it get standardized, since they're useful for some disks.

Basically, the errormap sits at the end of the data, and 'numerr'
specifies the number of error records. Each one tells what
sector should give an error when reading it, along with the
codes that should be given for the error. The reserved part
could be used to add other information for really strange
errors. (but make sure you publish the extensions, if you
add any!)

I hope this helps some.

Message-ID: <32471ca1.522544@news.superlink.net>
Source record: 80289

```
-
-Also:If you use Imageman to create a enhanced (double
density,128-byte
-sector) disk image (the closest you'll get to "formating"),it will be
for
-AtariDOS,not MyDOS.MyDOS can only really handle AtariDOS disks with
720
-sectors.Enhanced disks have 1040.MyDOS will think that it's a 720
sector disk.
-(or,more to the point,that it only has 720 sectors free,or somesuch)
-Just run "VTOCFIX" on it.It'll rebuild the VTOC (the list of free
sectors).
-One thing;when it asks you if the disk has 720 sectors,answer no and
put
-the real number(1040).Obviously this will go a lot faster if you run
-VTOCFIX before you put any files on the "disk".
-

I have no problem formatting disks using the Create ATR function of
Ape.
```

My XE130 has the UltraSpeed Plus operating system which has a
switch on the back that changes from XE/XL to 800. Works good. Check with
Bob Puff at CSS to see if he still has them.

Feh - I had a Spectre GCR Mac emulator. The Mac OS was faster than the ST. It handled windows, regions, buttons, and mouse clicks faster than the ST. It was just coded closer-to-the-metal. I eventually went "Mac". It's a bigger pain in the ass to program, unfortunately. Even today, I find myself wishing that I had a souped up ST to do some unix-style coding...

An engineer by the name of Jay Miner designed the Atari 8-bit and Amiga
graphics hardware. That explains why the display list architecture's used
in both machines.

Display lists are kkkkkoool! I wish they had become more popular and
universal. Then, perhaps, we'd have some really nice graphics
architecture that would enable GUI designers to create *real* windows OSs,
instead of this half-assed "update-your-regions" windows poop.

You know, I hate to even suggest this but... if you really like M.U.L.E.
(I'm not afraid to admit it, probably my favorite Atari 8-bit game
ever),
you should swallow any pride and get "PC-64" (the commy emulator). I
know, I know, it initially felt awful to do it, but I had to play
M.U.L.E
damnit!!!

Unlike the Atari emulators, it runs the game flawlessly and
the Commy version actually has an unexpected bonus! You can play with
up to three people! It's awesome, I hadn't played a three person
game since I first played it on the ol' 800 (later got an XL, only two
joystick ports!?). Unfortunately, the Commy has inferior music (3
voices
instead of 4), and the earthquakes no longer occasionally move a
mountain... Also, if you are interested in other "classic" 8-bit games,
most of the old Atari games can also be found in C-64 format on the
internet...

If your interested, e-mail..

matt

2274. PaperClip Double Column Problem!

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-23 00:00:00 UTC
From: tdrake1@umbc.edu
Message-ID: <524k1q$b2e@news.umbc.edu>
Source record: 80359

OK, here is a good one for you Paperclip 2.1 users!

When formatting for double columns and IF you are left with only 1 column of text in the left hand column and not enough to wrap onto the right hand column at the top you cannot turn off double column printing properly and return to only printing single column for the next page after the force page command is sent, UNLESS you already have two columns of text on that previous page.

Can anybody get around this problem?? I ended up padding out the previous page with just blank lines for a double column page which does not have two columns of text.

Anybody still using Paperclip??!!! I am currently using it with my Brother LaserPrinter with OUTSTANDING results!

Tom

: About the best thing I like about the ST is the GUI, far ahead of its
: time. Better than what the MAC had at the time too.

Are you kidding?!?
That was what turned me off of the ST.It didn't come with a DUP (command processor).You had to get one seperately.And the PATH was set to "A:\".
(I guess they never thought that anyone would have a hard disk)
So,if you used a hard disk,the extention-asociation thing was useless unless you edited the configuration file yourself to specify a direct path to the programme.
SpartaDOS was so much easier to use with a hard disk.
And there were no script files.
Why didn't Atari just do what Commodore did with the 128?

: >
: >.
: >I made it 160 becuase there's four text lines.
: >Also:GR.2 may be a little TOO big!
: >(try GR.1)

: There is a minor problem with this. If you don't clear the screen,
: after you fill the screen, you'll get an error 141 at line 20. I just
: tested this. Using get/put allows you to put the text directly into the
: GR.2/Gr.1 screen. Heck, you could even poke the characters directly to
: screen memory. Anyway, I just wanted to help this guy communicate with
: his wife. I hope I accomplished this.

Of course it does.All methods discussed so far do that.That was the
purpose of the clear-screen code.
Both of our programmes output through the OS instead of directly to the
screen.My version just sends the OS a line of characters at a time instead
of one character and gets input through E: instead of K:.
This allows editing.They're really identical except for the input.

(if you give the OS a line of text,it just sets up a loop and calls the S:
"PUT" routine once for each character.At least I assume that S: doesn't
use burst I/O like D:)

Either way,using BASIC's PRINT or PUT gives you exactly the same effect.
(that is,when outputing to S:)
Atari devices don't have raw and cooked (binary & text) modes.
(compare with UNIX's tty drivers and MS-DOS's cooked-mode emulation of
devices)
There's no way to switch off/on a device's interpretation of control codes
and et cetera.(unless it has a special XIO to do it with)

So PUT causes error-141 too.

Mike (mhill@one.net) wrote:

: Have you tried Pokey, or Xl-it? Im the author of Pokey for MSDOS
: systems.

: Mule runs fine on Pokey. Pokey also supports two PC joysticks so two
: players can play with no problem. If you build the printer port sound
: card detailed on my Web page you can have 98% true sound emulation on
: your PC.

: I believe Xl-it runs Mule too. Markus has done a fine job with Xl-it
: and has very good sound emulation built in.

: I think you will find that both Pokey and Xl-it have very high
: compatibility rates.

XL-it was too slow on my 80486-33 and Pokey needs a math co-processor.

Which is funny because I thought that DJGPP programmes didn't need a real
math processor. (they just use the EMU387 emulator)
I have go32 1.12.maint3,so I assume that the rest of my DJGPP stuff is
around that version.I saw a DJGPP version 2 somewhere.
Do I need to get the runtime stuff for it?

I tried email, however I don't know if it got thru, so I'll try this medium...

To: Steve Tucker

Steve,

I've had this interest for a while to try out your ProSystem cable
(build it, that is). However, I have a few questions:

1. Can I hook it up to a 1050 with a USDoubler chip installed?
2. What is the purpose of the Zener diode.
3. Where is the power source for the 14C89?
4. Is the SIO DIN line (Orange) driven by an open-collector output on the
disk drive? (ie, is that why we have a pull-up resistor on pin 10 of
the 14c89?)
5. Should the connection from "14c89 pin 1" be to "PC Serial 22"
not "PC Serial 20" ?
6. If the netlist is correct as stated for "PC Serial 20" above, then
what is the 9-pin Serial equivalent for "DB25 pin 20".

Cyrus

cyrus.malek@amd.com

opinions are my own

Not such a bad idea,but you'd want to swap it out to a RAM-disk/bank
switched memory.On a C128 you have a much greater address space.
(around 16MB or somesuch)
I've never seen a C128 with more than 128k but I've seen a 512k Apple][gs.
(and I know you can go much further with the Apple)

The apple][gs does not use a 6502. It used the 16-bit upward
compatible version (whose name I forgot), which has something like a 1
or 2M addressing range. Too bad the chip was available so late, and
also too bad Atari didn't do the same thing. I would have loved to
upgrade my CPU/keyboard and keep all my old programs and peripherals.

---------- GUIDELINES ----------

1] ***** Shipping *****

Shipping costs will be the responsibility of the buyer. At the end of the auction EXACT shipping costs will be assessed by weight and zone via UPS and totals will be EMailed to the winners. All packages under 5lbs. will be sent USPS Priority. Do take into account the weight of what you're bidding on BEFORE you make a bid, especially if you are from outside of the U.S.

2] ***** Bidding *****

SERIOUS BIDS ONLY!!!! Please, only bid on items if you intend to BUY! Bid withdrawals are NOT PERMITTED and are grounds for exclusions from future auctions and sales.(Plus it ain't very nice....)

3] We reserve the right to make corrections to and retract any item from the auction. (Will only occur if there is indeed an error.)

4] Trades are always considered. We reserve the right to trade an item at any time during the auction.

5] This auction will run with open bidding until Oct. 1, 1996. At that point no new bids will be accepted and we'll go into the ONCE, TWICE, SOLD mode.

6] Bids must be in even dollar amounts.
Under $20 --------- $ 1 increments
$20 to $49 --------- $ 2 increments
Over $50 ---------- $ 5 increments
**IF YOU DO NOT USE THE PROPER INCREMENT, YOUR BID WILL NOT

BE POSTED.

7] Please include your name, shipping information and "auction name" along with your first bid. If you had bid in a previous auction, we will use the same info. If anything has changed or you want to use a different biiding name, let us know.

8] All itmes have been thoroughly cleaned and tested unless otherwise noted.

9] Once you bid or ask to be put on the update list, your name will be placed in our address book so that you will automatically get all auction updates for current and future auctions. If you do not wish to be in any current and/or future auction update mailing, let us know and we can either permanenetly or temporarily remove you from the list.

**** Payment Policy ****

At the end of the auction after total winnings with shipping costs are EMailed to the winners, please send a check or Money Order (US$) - M.O.s preferred - within a week of notification. We'll post our mailing address at that time. Checks must clear both banks before we can ship your package to you. Money Order packages will be sent out within three days of receipt.

***Lack of payment received will result in forfeiture of participation in all future auctions held by us.

>Are you kidding?!?
>That was what turned me off of the ST.It didn't come with a DUP (command
>processor).You had to get one seperately.

Whoa! And the 8-bit comes with a command processor? Atari DOS 2.5?

And the PATH was set to "A:\".
>(I guess they never thought that anyone would have a hard disk)

So change it in the startup, no big deal. That's how every other OS does it.

Back in 1985, a 10MB hard disk cost around $1000, more than the ST.
Natuarally the ST had to be geared towards floppy use, because most ST users
wouldn't be able to afford a Hard drive anytime soon.

The 8-bit certainly wasn't designed to be used with a harddrive either.

>So,if you used a hard disk,the extention-asociation thing was useless
>unless you edited the configuration file yourself to specify a direct path
>to the programme.
>SpartaDOS was so much easier to use with a hard disk.

ahem SpartDOS did not come with the 8-bit, you had to buy it separately.

You could get a powerful command interpreter for the ST, like GNU's BASH, for
nothing. This is a real Unix interpreter.

I don't understand your line of thinking. You are criticizing the ST's
operating system for lacking features that the 8-bit was even more lacking in.
To get the features you want, you have to get add-ons for both systems.

If you're talking DOS/Win, I'd say that it's a toss-up between XL-it and
Pokey.

XL-it's latest version is faster, is better at reproducing some of the
trickier graphics displays. Has sound emulation through Sound Blaster.

Pokey can run some things that Xl-it can't, has PC joystick support, and
has support for sound through a Pokey chip device for 98% accurate sound.

Check out both.

>The first reply cut right to the chase. thanks. m.u.l.e still doesn't
>work. personally my favorite program. and no better sound?? damn. i was
>hoping.

M.U.L.E. works with PC Xformer. I've run it on both the 2.5 and 3.3 versions,
and I've also seen the author give a demo of PC-Xformer running M.U.L.E.
One thing I have noticed is that you often have to switch Xformer into 800
mode to run many games, because XL mode seems screwed up on it.

I'm not trying to defend Mihocka. I'm just trying to be fair.

Date: 1996-09-24 00:00:00 UTC
From: Jim Wiggins <jim.wiggins@ci.seattle.wa.us>
Message-ID: <529g6k$gva@lal.interserv.com>
Source record: 80235

I brought an Atari 1040 ST with megadrive (HUGE 60 megabytes :>}) over
here from England. Now I want to run it. I can either
1) plug it in in to the drier socket
2) buy a 115/240 steup up transformer
3) convert it to 115.

I would like to convert it to 115 volts.

Does anyone have experience with this?

Thanks a lot!

Sorry .. but the power is not only of a different "potential" in
England (220v vs 110v in the States), but also of a different frequency.
In the U.S., it is 60hz in freq. ... in the U.K., it is 50hz. There
are power converters made, but you have to be sure it can handle the
load demands. In the minimal case, your computer and monitor will not
work properly, and in the worst case, you will actually damage one or
the
other. Take care ...

2305. Copying/emulating BASIC XL and other SuperCarts

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-24 00:00:00 UTC
From: Bill Wilkinson <BillW@Asymetrix.com>
Message-ID: <3248612B.3FAF@Asymetrix.com>
Source record: 80240

[A reply to Mark Simonson's mail re copying(???) BASIC XL.]

> <<< snip >>>
> BASICXL1,A000,BFFF
> Repeat procedure for D502 (to select bank 2) and D503 (to select bank 3),
> writing the ROMs to disk each time.
> Finally, transfer the files to my Mac and stitch them together.
>
> Well, it didn't work. Is there some reason why this shouldn't work?
>
> Mark Simonson
> marksim@bitstream.net

I don't think you read my message carefully enough.

The "SuperCarts" were arranged like this:

```
+-------------+-------------+-------------+
| Bank 1 | Bank 2 | Bank 3 |
| $B000-$BFFF | $B000-$BFFF | $B000-$BFFF |
+-------------+-------------+-------------+
| All Banks |
| $A000 - $AFFF |
+---------------------------------------+
```

In BASIC XL (and, in fact, in all the SuperCarts except Action!)
the SEQUENTIAL flow of code SELDOM stays in a single bank!

Typically, common subroutines (e.g., convert line number to
address of line) will be in the "common" part ($A000 thru $AFFF)
and individual statement processing will be in a single bank,
BUT there are MANY special functions, etc., that almost ALWAYS
require going to a specific bank.

Let's say you see the BASIC XL line:

```
20 A$ = STR$(34.5)
```

The "LET" processing might be in Bank 1, but the STR$ processing
(which is actually the same as the "print a number" processing)
might be in Bank 3.

So the assembly language FLOW might look SOMETHING like this:

```
**IN BANK 1**
at $B300:
< load 34.5 into FR0 >
jsr $A030
```

```
** IN COMMON BANK **
at $A030:
sta BANK3SELECT ; change to bank 3
jsr $B300 ; well, it COULD happen!

** IN BANK 3 **
at $B300:
< convert FR0 number to string in BUFFER >
ret

** IN COMMON BANK **
at $a036:
sta BANK1SELECT
ret

** IN BANK 1 **
at $B312 (or some such address...just after the JSR $A030
above)
< copy BUFFER to A$ >

So "stitching together" the banks doesn't do ANYTHING!
You end up with DIFFERENT code at the same addresses.
Or at the wrong addresses. Whatever.

If you are trying to write an Atari emulator that can
handle a SuperCart, you would have to put the different
banks in different "based" memory, have your
emulator detect any bank change instruction (any store
[or load or test or whatever] to $D500 through $D5FF,
and change the "base" register appropriately.

Is that really worth it? I doubt it.

I have the following 8-bit items for sale or trade:

Make offers:

1450 XLD motherboard. Tong version $150 or best offer

CSS Mutliplexer w/ 3 slave units $125 or best offer
and docs and software
(okay so this isn't rare but it is a good price!)

XTM121 Thermal printer no ribbon, no p/s $75 or best offer
(working and finished prototype)
Has a serial number and the words 'working sample' on the back

XTC1411 Color Composite monitor $275 or best offer
'Working Sample' on back of monitor

1400 XL in a 1400XL case with power supply. $375 or best offer
has an anodized label which says 1450XLD on it
(i.e. the model number is 'real' not just pasted on there. it is
identical in form to any of the XL series model 'labels'

ALL ITEMS WORK!

Prices do NOT reflect shipping.

>the other. Take care ...

I didn't see the original question (looks like it should have been in comp.sys.atari.st.tech, however), but I can say from personal experience that it is perfectly safe to take an Atari ST made for European power and plug it in to US mains - my son is using a British Mega 2 and has been for years. The power supplies are of the switching type, so as long as there is enough juice, and not too much (no more than 200% of rated value in most cases), it will work. I would NOT try this going the other way (110v computer with 220v outlet) without having a spare computer on hand, however. The power-convertor plugs will probably work fine, though - the ST really isn't too picky about power line frequency.

Monitors are another kettle of fish. Don't use it on a power line it isn't rated for. Period. IF going acroos The Pond, plan on buying or borrowing a suitable monitor there, or take a multi-voltage TV set along (and live with lower resolution), or try to find an older multi-sync multi-volt monitor (see comp.sys.atari.st - possibly .tech - today for a list of multi-syncs that are known to work with the ST, and the tech details of how to connect them).

These rules are applicable only to the STf and fm series - the old "brick" power supplies are probably analog (non-switching). You can get transformers in Europe that reduce the line power from 220 to 110, and I used my old 520ST (and the 800XL and 130XE) that way for several years in Germany. It also works on monitors. You would need a transformer rated at least 300 watts for a monitor and computer, though, and that will cost quite a bit and be very heavy.

Ditto. That's what I use for my XL. I think the cable was originally
intended to be used for TRS-80 cassette tape storage. You have to put some
other connectors on it, of course, but mine seems to work just great.

Source record: 80244

Hi,

I just recently bought the desert falcon RX8089 catridge for my 600XL. but ehmm... it didn't work. My question is: Is is supposed NOT to run on the 600XL (due to the 16k of mem) or was it realy the catridge that's defect? (It did say on the bottom of the box 'Also plays on XE and XL systems'..)

---Reinard

p.s. If you happen to live in the Netherlands, the Intertoys toy-store chain still has some atari catridges for sale for about Fl 5,- each (is approx $3) I just picked up pole position and moon patrol. Most of the catridges they have are for the 2600 game system though.

I guess one thing was incorrect about my posting. The cable I used had
phono plugs on it, not RCA plugs. I just happened to have one around, so I
patched an RCA plug into it, and it works great.

Cross-posted to: comp.sys.cbm,gnu.gcc.help,de.comp.gnu,comp.sys.atari.8bit

I don't know about porting gcc (as a cross compiler) to work
on the 6502 but in the dreamtime I ported an old version of the
Amsterdam Compiler Kit to work on a 6502 (well actually a 65C124).
Its still being used six years down the track and generates not
entirely implausible code for embedded systems. Anyways if anyone is
seriously interested in the gcc port (or the ACK one) get in touch with
me and we'll see if we can get a couple of students to do some work
on it.

For sale:

Atari 800 (48K)
1050 Disk Drive
410 Tape Drive
Communicator Package (includes interface module and 300 baud modem)
Software (Ms. PacMan, Pole Position, Joust, Star Raiders, Basic,
Assembler, among others)
Books: De Re Atari, Compute's Atari Series (1st, 2nd books on Atari,
Mapping the Atari, Atari Graphics), and others

Everything is in pristine condition, having spent most of its life in boxes
in
the back of my closet.

I don't really want to go through the trouble of selling this stuff
separately.
You can have the whole thing for $50 (US) plus shipping. Shipping from
San Diego, California.

Anybody who is interested should respond via e-mail to me before
October 1 since I'll be giving this stuff to charity if I don't sell it by
then.

Z,

Have you tried Pokey, or Xl-it? Im the author of Pokey for MSDOS
systems.

Mule runs fine on Pokey. Pokey also supports two PC joysticks so two
players can play with no problem. If you build the printer port sound
card detailed on my Web page you can have 98% true sound emulation on
your PC.

I believe Xl-it runs Mule too. Markus has done a fine job with Xl-it
and has very good sound emulation built in.

I think you will find that both Pokey and Xl-it have very high
compatibility rates.

Rich,

I have to disagree. After working on Pokey my 8-bit emulator for DOS
systems I have had to tackle both video and audio emulation....

Accurate sound emulation is probably the most difficult aspect of an
8-bit emulator. Video modes while tricky are not that bad.

If the Atari didn't have 4 channel sound with Distortion it wouldn't
be too difficult.

I do agree though that Markus's sound emualtion is pretty good. I
sent him some much cleaner samples that I made with my Pokey printer
sound card. They improve the sound quality of Xl-it greatly.
Hopefully Markus will be releasing a newer version of Xl-it soon using
those new samples.

Asharkis,

Well I doubt Mule or any other program doesn't run on Xformer because
it is copy protected or not.

Im the author of Pokey the 8-bit emulator for DOS systems. This topic
has been a very interesting one to read.

As for printer support being a low priority for Pokey....Printer
support will be in the next version of Pokey which should be out this
weekend.

>[snip] Compute's Memory Map for the Atari by Ian Chadwick.

This is *the* book that you'll need. If you can find it, get the
revised edition of Chadwick's book. 'Course, if you need to learn 6502,
a no-nonsense approach is Lance A Leventhal's "6502 Assembly Language
Programming" (1979, Osborne/McGraw-Hill, Berkley, CA; ISBN 0-931988-27-6).
While this book is rather technical and makes for dry reading, it
explanes *everything* that you'll ever need - and not need - to know
about the 6502 AL.

Another book that I referenced frequently was Richard Mansfield's "The
Second Book of Machine Language" (1984, COMPUTE! Publications, Inc.,
Greensboro, NC; ISBN 0-942386-5301). Mansfield also wrote "Machine
Language for Beginners" (1983, COMPUTE! Publications, Inc., Greensboro,
NC; ISBN 0-942386-11-6), which compares many of the ML commands to BASIC
counterparts (ie LDA/STA to POKE, etc.).

Well, there's my $0.02. Dollars...not hex. :-)

On the subject of people who were left out of the Atari tree (somebody mentioned that Chris Crawford was a major omission):

They also left out Dave Theurer! He was the original author of Tempest; more recently he's worked at Kaleida Labs, and is credited with creating DeBabelizer for Equilibrium software.

Any others that should have been mentioned?

I was reacting to the notion that trimming printf down to a mere
40K solves the problem, by doing some simple address space mathematics:

64K - 40K leaves 24K (less, if certain areas of the address space
are used for system specific resources: such as the zero page and stack
page, so we're already down to 23.5K and counting down)

> There's also the start-up code.
> (on Linux,both of these are kept in a seperate "library" file that all
> programmes access)

Now I get it. The Linux for the C64 is going to swap memory
out to disk to give an effective memory much larger than the 64K address
space. <chagrinned, crestfallen look> I can see how that would solve
the problem.

Help! I just recently got an SX212 modem but have no software to use with it.

Several people had said they would send me various term programs, but I have lost my printout of those messages.

So again....does anyone out there have a term program(s) they can send me, or perhaps the 850 handler program so that maybe 850 Express would work?

I will gladly send you a pre-stamped mailer and disk to put it on if you can send me and SX212 term programs.

I think I remember a program called XMOVE.COM, that will move a
directory and it's files to another disk (not to be confused with
MOVE.COM that only moves directory info from one location os a disk to
another on the same disk). Unfortunately, this is coping, so it may not
be what you want. I'll have to get on the 130XE and check around and
get back with the results.

: the problem.

Not such a bad idea,but you'd want to swap it out to a RAM-disk/bank
switched memory.On a C128 you have a much greater address space.
(around 16MB or somesuch)
I've never seen a C128 with more than 128k but I've seen a 512k Apple][gs.
(and I know you can go much further with the Apple)

For that matter,I've never seen a RAM-disk or bank-switched memory for the
C128.

: It's two colors. The other two only show up because of the limited resolution
: of the TV screen. If you use a high-quality monitor, you won't get those
: extra colors.

Actually I use my Atari on a Amiga monitor and I still get artefacting.
(Of course the atari plugs in the composite video and the Amiga plugs in it's
own kind of thing (RGB?))

Mine has the XL OS as well.

You know,as cool as that book is,it probably contributed to the problem of
programmes accessing the OS (and DOS) in ilegal ways making later (D)OSes
incompatible.It gives jump points into the handler subroutines,

(like one to print as character to the screen)
DUP routines and BASIC routines.

: > just moves the margin to the far left of the GR.0 area.
: >
: > Bruce Willard bwillard@mindspring.com

: Actually, it's POKE 82,0 to change the margin. The Revised version is this:

: GRAPHICS 18:POKE 87,0

: (or use GR.17 for more text on screen)

GR.17 is better also becuase it won't crash the computer.
If you go to far off the bottom of the screen in GR.18,it goes all crazy
where 17 just gives you error-141's.

There are 2 versions of MULE. One will work on 800 or XL and one
will NOT work on the XL because of its rom paranoia routines. The
'cracked' 800 version I have works without the on disk protection, but
still wont run without the real 800 rom.

The game itself is identical.

> should be?

If you look at the colour registers, then yes; the colours are defined
that way (look at the four base colours in the four-colour modes:
blue, green, orange, black). However, in the two-colour hi-res modes
(BASIC modes 0 and 8), the foreground hue is the same as the
background hue, no matter what the colour registers say. You might
consider it a bug (doesn't look like a real Atari) or a feature
(slightly more flexible graphics).

> the ATR-files.
>
> Thanks Matt
STRUCTURE OF AN SIO2PC ATARI DISK IMAGE:

It's extremely simple. There is first a 16 byte header with the
following
information:

WORD = special code* indicating this is an Atari disk file
WORD = size of this disk image, in paragraphs (size/16)
WORD = sector size. (128 or 256) bytes/sector
WORD = high part of size, in paragraphs (added by REV 3.00)
BYTE = disk flags such as copy protection and write protect; see copy
protection chapter.
WORD=1st (or typical) bad sector; see copy protection chapter.
SPARES 5 unused (spare) header bytes (contain zeroes)

After the header comes the disk image. This is just a continuous string
of
bytes, with the first 128 bytes being the contents of disk sector 1, the
second being sector 2, etc.

* The "code" is the 16 bit sum of the individual ASCII values of the
string
of bytes: "NICKATARI". If you try to load a file without this first
WORD, you get a "THIS FILE IS NOT AN ATARI DISK FILE" error
message. Try it.

(From SIO2PC Docs)

I should point out that BASIC XL **IS** still being sold
by the current owner of the product: Mike Hohman of
FineTooned (FTooned?) Engineering.

I don't understand the fascination of running BASIC XL
on PCs and MACs (where there are, let's face it, MUCH
more powerful BASICs, not to mention other languages),
but if you gotta you gotta.

If you are intending to run it on an Atari 8 bitter, though,
you really SHOULD get a legit copy from Mike.

M.U.L.E. does not work at all with 3.5 or xf33demo, and it doesn't work
properly on earlier versions - even in 800 mode (I don't think M.U.L.E.
works on a real 800XL without a translator anyway).

The fact is XFormer is at version 3.5, it works with very few games,
those that do run are usually buggy.
XLit, POKEY and ATARI800 (which are free and at far earlier stages than
XFormer) all work better.
The only advantage XFormer has is that it is fast, but who cares how
fast a game is if it doesn't work !

>) or 2M addressing range. Too bad the chip was available so late, and

No, actually, it can address 8.25M. The actual limit was 16M, but Apple
decided to limit it. :(

However, I've seen AppleIIe's with 1M, AppleIIc+'s with 4M, etc. I believe
there was a 4M card for the AppleIIe from Applied Engineering, but I
don't remember anymore. Still, porting gcc to the 6502 seems to be an
interesting alternative to watching paint dry. :)

M.U.L.E does work on an 800XL without translator. I ran it all the time.
You just have to disable Basic with the Option key.

M.U.L.E under Xformer may have some graphical flaws, but it runs well enough
to be played. I'm also pretty sure I had it running with the xf33demo too.
(Although I must say that the emulation and speed of the xf33demo are inferior
to the xf251 version for some reason)

I understand what you're saying. Nevertheless, Rainbow (an
800/800XL/130XE/5200 emulator) *does* handle SuperCarts--at least
according to the docs that came with it. But it's a little sketchy about
how to obtain them.

The part that "didn't work" for me wasn't the "stitching together" part--I
never got that far. When I tried the procedure outlined above, it seemed
as if the ROMs had been written to disk. After I transfered the entire
disk image to my Mac, I mounted it in Rainbow and tried to "export" the

files to my Mac hard drive. Although DOS 2.0s running on Rainbow could "see" the files, the export function in Rainbow could not. I then opened the disk image in AtariVDedit and took a peek at the files. This sort of worked, but the first and third files appeared to be identical, and probably not the BASIC XL code (I noticed the word "Roklan" in one section!); the second file was corrupt. I was able to extract the 1st and 3rd files, but got an error when I tried it with the 2nd file.

So... Apparently, the method I tried (doing everything from DOS) does not work.

BTW, I feel a little funny getting advice from the author of BASIC XL on how to copy the BASIC XL ROMs to disk for use with an emulator. This whole emulator business is probably in a rather ambiguous area legally. I could very well be violating my licensing agreement with OSS (or whoever has the rights now--FTE?), but it seems like fair use to me. Anyway, I promise not to pass them around if I ever do manage to get them out.

Beware of ML for beginners - it uses some non-standard calls that work
fine on the 400/800, but will send your XL/XE to bit heaven. I
personally like Zaks two 6502 books; I find them more "user-friendly"
than Leventhal.

Yeah, it's analog RGB.

I use my Atari, which has the Super Video 2.1 upgrade installed, with
a Commodore 1702 monitor (in the split video input) and get no
artifacting. Surprising the number of games that rely on that (probably
mostly apple ports) when they could just as easily have used mode "7.5".

Shucks, Mike, you're making a liar out of me already. How am I ever going to get my article written if you guys keep adding features <G!>

It's nice to see that someone thinks that emulators are for more than just playing games. Thanks for the addition.

BTW, when I run BASIC or DOS in POKEY, the screen shows up blue with bright green text. Colors seem normal otherwise. Is this the way it should be?

Sorry about the mis-posting, I have now crossposted this to st.tech.

>is perfectly safe to take an Atari ST made for European power and plug it in to
>US mains - my son is using a British Mega 2 and has been for years. The power
>supplies are of the switching type, so as long as there is enough juice, and not
>too much (no more than 200% of rated value in most cases), it will work. I

This sounds hopeful - now my question is: Are you plugging in directly to
110 volt or using a step-up transformer?

>
>Monitors are another kettle of fish. Don't use it on a power line it isn't
>rated for. Period. IF going acroos The Pond, plan on buying or borrowing a

So, my British monitor will not work on 110 volt, but I am under the impression
that it will work on 220 volt U.S. 'appliance voltage'

>lower resolution), or try to find an older multi-sync multi-volt monitor (see
>comp.sys.atari.st - possibly .tech - today for a list of multi-syncs that are
>known to work with the ST, and the tech details of how to connect them).
>
Thanks for the advice - it may actually be easier to do that than sort out
a new power source.

>These rules are applicable only to the STf and fm series - the old "brick" power
>supplies are probably analog (non-switching).

I think this is answering my above question - the STf power supplies will
switch automatically from 220volt to 110 volt. Please correct me if I am
misunderstanding this point.

>on monitors. You would need a transformer rated at least 300 watts for a
>monitor and computer, though, and that will cost quite a bit and be very heavy.

Absolutely right! An expensive boat anchor (which is what my Atari is until
I sort this problem out!)

Thanks for your help.

> Graffiti

AFAIK, the Apple IIgs uses the 65c816 chip, the same as in upgraded
Ataris
(with the Sweet 16 or something similar). By the way: the 6502 code is
much
shorter than INTEL's or MC680x0's. A program, that uses about 100k on a
PC,
on the Atari takes about 30k or something. Anyways, the PRINTF routine
is inside
the SpartaDOS X and actually it does not use 40k of RAM.

Isn't it much easier to port the gcc to the 65c816 (with it's 16 MB
address
space, 64k stack, 16-bit registers etc.), before anybody can port it to
the
6502? 6502 has a C compiler yet: it is the CC65. Additionally, there
exist
several good programming languages for the 6502, such as the Action!,
Forth,
or at least the Turbo BASIC XL. At the other hand, most people I know,
write
6502 applications just in the assembly language. But there is no good
programming
language, that produces the 65c816 code (except for the assemblers like
the MAE).
So it would be nice to have the gcc for this chip.

I tried this on my 130XE and was very impressed. That's very
interesting. I found that you do have to do a clear screen after the
screen fils up though or you get errors. I like it. I guess you can
always learn something new. Even back space worked correctly. Wow.

: Which is funny because I thought that DJGPP programmes didn't need a real
: math processor. (they just use the EMU387 emulator)
: I have go32 1.12.maint3,so I assume that the rest of my DJGPP stuff is
: around that version.I saw a DJGPP version 2 somewhere.
: Do I need to get the runtime stuff for it?

DJGPP v2 is the latest available. It's at:

ftp://ftp.cdrom.com/pub/simtelnet/gnu/djgpp/v2*

(There's a v1* set of directories if you want older stuff). Anyway,
in there, check out:

v2misc/wmemu2b.zip
v2misc/wmemu2s.zip

wmemu is a 387 emulator. The zip suffixed with b is binaries, the one
with s is source. If you don't have a .zip decompressor, unzip386.exe is
in the djgpp directory.

Amen to that. I'm one of the suckers too.

Whereas Pokey and Xlit which are Freeware run heaps better. In fact if
Pokey gets the Sound Blaster part working it will be nearly perfect. The
only game I still would like to get working properly is Crisis Mountain
which in every version I've downloaded has a line through the middle
which makes level two impossible to play.

Who else has had problems with the Branch always Mob?

I know this has been talked about quite a bit, but, is it feasible? Would it be possible to get hold of the components, or are some of the chips Atari standard? ;-) Do you think it would be possible to squeeze the whole thing on a card? I have a dying 800XL so could remove chips from that.

If someone started building them, I'd buy one without hesitation. Wishful thinking?

Kind regards.

The 386 is an enigma.

Too fast to play Joust, too slow to play Doom.

From: Matthias Belitz <matz@kawo2.rwth-aachen.de>
Message-ID: <324A5191.1691@kawo2.rwth-aachen.de>
Source record: 80189

Hello once again.

Because of my terrible English, my former question was easy to
missunderstood.
Here I try to explain, what I really want:
I want to copy (not move) a complete dirictory with all subdirectories
in it to another disk (like XCOPY on MS-DOS machines), so that on copy
command will allow to copy 20 directoreis for example.

Waiting for your answers.

Thanks, Matt

> BUY A used 386 for heaven's sake!!!!

I think, itï¿½s a dream to work with the old machines - you know every bit personally and itï¿½s fantastic to see whatï¿½s possible to do with these old machines ...

And if the computer run - it runs and you donï¿½t have to reboot twice an hour ï¿½cause a program crashes down and takes to whoole machine with it (as my Bugware 95 does) 8-)

So please, donï¿½t be so ignorant - we know whatï¿½s the technic uptodate is but iï¿½ll never understand how a machine with so crippled concepts and especially software as the IBM-compatibles became "just the standard" .

Matt

>
>Kind regards.
>--
Sure it is possible, but it would be rather expensive. You'd have to reengineer the entire machine to interface with the PC, use its memory and peripherals. The advantage would be that you could have real SIO and ECI ports, POKEY sound and real ANTIC/GTIA graphics. Maybe someone with enough engineering and software backgroundand lots of energy could redesign the 130XE to work this way and sell the schematics and instructions for assembly. The card would be the next block to tackle. Parts would probably be the easiest to get. I personally have a dead 800XL, 600XL and 130XE. The XE has a 1MB RAM upgrade in it too. I suppose the boards could be designed and printed for sale without any other parts.
I would love to own one of these (maybe even two (1 for home and one for work)). Hmmm... Let's see... Schematic, parts list, assembly instructions and pc card... Oh about $150-$200 should cover it. Any takers?

Urs> run on and where can I get it.

Yes. Atari 800 and 130XE (among others).
http://www.funet.fi/pub/cbm/programming/cc65/.

But beware, it doesn't have any floating point (it uses the Atari ROM calls and some 6-byte packed char arrays). It has been ported to more standard C, e.g. it can be run on any computer that has a C compiler, e.g. gcc. Many of the libraries are based on Atari's ROM routines, so you'd have to rewrite the libraries. I wouldn't base them on Commodore's ROM either, but rather write a real OS where the C programs could run. I'm looking forward to see the next version of Daniel Dallman's LUnix (Little Unix) operating system.

But you should also contact the Oric people who are working on a C compiler for the Oric (also a 6502 machine). One version is based on gcc (32-bit register machine emulation), and one is based on something else (16-bit register emulation). Some references:

http://www.ensica.fr/~frances/oric/
comp.sys.oric

Unlike the CC65 which is from late 1980's or early 1990's, this Oric C compiler project is actively going on, and it might even become something. :-)

Follow-ups set to comp.sys.cbm and comp.sys.oric.

Eh? I used a hard disc for years with various STs and never had any
problems with file association. As for a CLI, install and boot with MiNT
and have as many as you want in WIndows with lots of loverly Unix tools.

I'm real curious to see the "big improvements" to Xformer. I noticed
the page hasn't been updated in like 3 weeks. A new, and supposedly
vastly improved version was supposed to be available. What's the deal.

Don't know much about C but I do believe you're right. C tends to lump
commands together in header files. To use printf you need to call in all the
stdio routines which are compiled with the program weather they are used or
not. In other words, that 100K contains the machine code necessary for
several other C functions. Strip out all the bagage and sudenly you have a
pretty lean program.

Perhaps I could make a little plug here; The Sysop of the Jail BBS (in toronto on) and myself have started up the next generation of the IAN, now interchangably called IMR (International Message Relay). Our network now has 10 BBS's Internationally, 4 in north america (2 us, 2 canada) , and 6 in europe. We wanted to start up a new network ourselves after the original IAN sort of fizzled away, and now the support of this network is great among all who have joined!

We would like to significantly expand this network geographically, so if anyone is interested, please get in touch! I encourage all to check out my BBS to see what it's all about. Maybe it would be good if I posted our current active nodelist? I'll do that in a bit. That would help to locate a node closest to you.

Actually, it's $199, though the eventual RAM card and additional RAM would
be extra.

This is a misconception. The header files are just the declarationsof the
functions; these do not cause those library functions to be linked in from the
system libraries. However, printf() does a lot and refers to many other
functions which have to be linked in if you use it.

No, No, No. That's NOT what he's looking for. He wants to copy
specific directories with the contained files and subdirectories
benieth the object directory.
EX.: D3:>PROG> *.*
BASIC>*.*
BXE>*.*
M^%>*.*
otherfiles1
.
.
.
otherfiles n
while not copying other directories or files on the disk above PROG>.

This is probably a hard drive and he wants to copy the directories and
files to floppy or some such thing. A full disk copy is not what he's
looking for. I thing XCOPY.COM has the capability to do this, but I
can't test it right now. MY hard drive is not working at the moment. I
think my SASI<>MFM controller died.

It probably could be, but why, when I can pick up a fully
functional 130XE for $5.00 at the Trenton Computer Fest. I did so this
past spring. Now I might have to get a new SCSI<>MFM controller, but
who's counting. The 130XE, 256K MI/O, SDX and BXE are all working fine.
Blast that hard drive system. Oh well...

Now that would be an upgrade worth doing!! It seems like then you could
have 10 P/M graphic characters, all on a 160X192X16 screen!! (Or maybe
have a 320X192 display with 4 colors?)

Bob, any chance of seeing how this is done? Does it require any chance
to the OS?

I'm looking for an Atari User named Sloopy Malibu. He's been an Atarian
for a Long time. He even used to write articles for Atari Magazines. I
Remember one in AIM Magazine. I have some unfinished Business with Him.
We were in the middle of a Trade and after I received my part of the
Trade, I lost touch with him. And I still need to complete the Trade.
If anyone can help... An E-Mail Address, a Phone Number. Direct any and
all Replies through E-Mail to: bensmith@teleport.com

==Thanx==
===Ben===

I need to apologize to "Yogi." I didn't read his msg carefully
enough. He DOES own a copy of BASIC XL and he DOES propose
that only legit owners of such copies should download his
effort if he succeeds.

(He also asks if Mike Hohman is still "around". Anybody
know?)

Maybe I was harsh in using the words "bozo" and such, but you say you know what happened, but then you deprive us from your version of what transpired. I do know that the mere mention of the Internet seemed to put some people on both the USF and IAN into a tizzy. Since I wasn't privvy to messages on the Sysop's base, I cannot say if things escalated there. But in the Atari 8-Bit message base, I made a suggestion about using the Internet, it languished for a while, someone else picked up on it a few weeks later, a discussion on it ensued, then out of the blue, an onslaught of angry messages mostly from the IAN side with threats of dropping the cross-netting the two nets.

SOMETHING happened that I maybe didn't see. A lost thread? AAA continued thread from the sysop's base? But from my viewpoint it started a s friendly discussion and suddenly we were being blasted for no apparent reason! And Mr. Mulvey, wasn't it you who suggested, very angrily, splitting the nets? Just WHAT brought that on?!? I DIDN'T SEE IT!

PS - You can grow up too! (Nyyyyahhh!)

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. For the last couple of weeks BSC has received a Half Dozen deliveries of Atari Stock. And in BSC's Catalogs, you may find something you've been looking. At BSC's Web Page you'll View, & DownLoad Catalogs or Contact BSC by Web Page! Or Request Catalogs by E-Mail. Have problems connecting with BSC's web page? Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. I'll get back to you after the weekend. Catalogs are sent only by E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com.

I'm taking a few extra days off from the InterNet to catch up on the Backlog of Testing, Catalouging and Pricing the New Inventory that's been delivered in the last few weeks. With my problem with depression. Getting behind while watching work stack up and running out of room in my work area. This should be fixed once the new inventory after being tested, catalouged and priced is then put in Inventory Storage. Then I'll have Room to work. I should be back on the InterNet on Thursday, Oct. 3rd. Otherwise I might see a therapist for InterNet addiction.

2414. Re: 720K XF551 custom drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-27 00:00:00 UTC
From: rwoolley@pacbell.net
Message-ID: <324CA3F9.6C15@pacbell.net>
Source record: 80132

Yes, if you use only half
of each sector (i.e. if you lose a half of your hard drive capacity),
any writes are improved, but read operations are slowed down (sic!).

I meant, that the only radical solution for these is a DOS, that could
read and write 512-byte allocation units. Thus IDE drives could be
both fast and big.

KMK

the IDE interface reads and writes 140 sectors per second. with a drive
that has NO errors, it reads 180 sectors per second. that's as fast as a
1.79mhz 6502 can go.... MYDOS, yourDOS, noDOS - it will not do better.

2415. Re: 720K XF551 custom drive

Newsgroup: comp.sys.atari.8bit

From: rwoolley@pacbell.net
Message-ID: <324CA1E0.800@pacbell.net>
Source record: 80133

And, as far as I know, the 6502 does a memory access on each clock
cycle. Could you> explain it further?

Thanks

KMK

Some of the Atari addresses select the OS ROM, hardware or the cartridge.
None of these sections of the Atari will run at 14mhz. The RAM addresses
will run at 14mhz - which is a little faster than a normal 8-bit. The
65816 does run just like a 6502 with extra instructions.

>
> Bob, any chance of seeing how this is done? Does it require any chance
> to the OS?

gotcha! P/M is done in GTIA. sorry. 320x192x4? well.... the second ANTIC
outputs intensity information only, so you could have 4 shades of one
color at 320x192. it is done by mapping two ANTICS into the system, each
with it's own memory and D/L. you select one or the other and write the
D/L and screen data to it, using M/L or the operating system. for
example, select ANTIC2, GR.5, load a screen, select ANTIC1, GR.0,
type colored text...

Yeah, Mike's still around. He's so busy working at his "real" job that he doesn't have much time to work on the Atari projects. But he *does* still exist, and he *does* still love the Atari.

2418. SUMMARY: Fixing 8-bit Atari's

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-27 00:00:00 UTC
From: Ray Johannsson <rpj@klg.com>
Message-ID: <324C138A.5F2C@klg.com>
Source record: 80136

I posted a couple of weeks back asking for help on
fixing my old Atari 400. Although I wasn't able
to get it working, I received some really cool
advice from some net-heads. My mom taught me to
share, so here's the info :-)

Thanks!
- Ray

"Black screen" is a classic symptom of a poor
connection of the RAM board with its' socket.
Overtime. even with gold-plated contacts,
the Atari 400/800 RAM boards and their sockets
slowly develop a poor electrical connection.

If you are not terrified of the insides of a
400, you need to open the case, remove the
RAM board from its socket. Perhaps, gently
clean the gold contacts on the RAM card
with alcohol, then place the RAM board back.

You can test the 400 *before* putting the case
back together by holding down the cartridge
door micro-switch (the tiny switch which is
usually depressed by the cartridge door)
and powering-up the system.

After cleaning & re-seating the RAM card,
your 400 should be good-as-new. If that doesn't
work...the RAM card may be defective. (Or my
diagnosis may be wrong!)

GOOD LUCK!

Bob Bell

Sure it aint the power supply? These seem to go bad quite often.

> > The only solution is a new DOS.
> a new DOS? the IDE works just great on DOS 2.0! or no DOS at all....

Bill, I do know. The IDE drives work just fine on DOS 2.0, 2.5, 3.0,
4.0,
MyDOS, SpartaDOS, SpartaDOS X etc... But with 256-byte sectors they are
slow, slow, slow. Especially in writing. Because to write a 256-byte
sector you must read-and-write 512 bytes. Yes, if you use only half
of each sector (i.e. if you lose a half of your hard drive capacity),
any writes are improved, but read operations are slowed down (sic!).

I meant, that the only radical solution for these is a DOS, that could
read and write 512-byte allocation units. Thus IDE drives could be
both fast and big.

Hmmm... it seems to be phenomenal! :) But... where is the time the
65c816 is
not using RAM? I confess, I do not know much about this CPU, but I
always
thought, that these things went the same way as in the 6502. And, as far
as I
know, the 6502 does a memory access on each clock cycle. Could you
explain
it further?

Thanks

2424. XF551 Replacement Mechs 4 Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-28 00:00:00 UTC
From: b.poehland@genie.com
Message-ID: <19960928190426.aaaa000Cn@babyblue.cs.yale.edu>
Source record: 80069

I have two brand-new 5-1/4" Mitsumi 360K half-height floppy mechs to sell.
These are original equipment replacements for the mech in the Atari XF551
floppy drive.

Price is $17.00 per mech, postage INCLUDED. :)

USA buyers ONLY, please.

Note: Although in theory virtually any standard half-height DSDD IBM-compat-
ible mech will work in the 551, in practice only the Mitsumi mechs
will fit. That's because only Mitsumi mechs (as far as I know) have
both the power & signal connectors on the right side. The short
length of signal cable from the 551 controller card (which saved Atari
all of what, 4 cents?) won't reach the connector on any other brand of
drive mech. (God bless Tramiel.)

Contact me by e-mail if interested:

Ben Poehland
b.poehland@genie.geis.com

2425. SyQuest-44 HD Mech For Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-28 00:00:00 UTC
From: b.poehland@genie.com
Message-ID: <19960928191548.aaaa000In@babyblue.cs.yale.edu>
Source record: 80070

SyQuest 44-meg Removable Media drive mech for sale.

Price: $65.00 (Includes shipping & tech docs)
USA buyers ONLY

This is an embedded SCSI drive mech that works splendidly with the Black Box.
(Any other host adapter, I don't know, but should work. The SCSI imple-
mentation in this drive is *very* robust, they seem to have satisfied the
SCSI protocol requirements extremely well.)
The form factor for this mech is 5.25", half-height.
Minimum power requirements: +5V/1A & +12V/2A, 4-pin IBM-style connector.

Optional items (prices include shipping):

44-meg removable media cartridge w/docs & case: $35.00
(Note: these carts are now second-sourced by Verbatim, $37 each from
Club Mac, Irvine CA 1-800-258-2622)

Custom steel case, beige-grey finish: $12.00

Custom installed in shoebox case w/power supplies & fan: contact me.

External IBM-style switching supply: $25.00

My apologies if the price for this mech seems a bit steep, but these suckers
weigh a ton & I'll take a clobbering on postage. USA buyers ONLY, please.

>

That can be done simply by opening the stdio.h file, looking at the entry for
printf, then copying it to the source code without including stdio.h
in other words, replace

#include "stdio.h"
```

```
with

extern void printf();

or however it is listed in stdio.h
```

No, don't jamit..just replace the frist row of ram..in fact you can probably just replace the first 4-5 rams then check it again..should take care of the problem..

Get handy at desoldering and soldering..

2429. Sale Failed Ref Cartridges

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-28 00:00:00 UTC
From: Bob Klaas <bobkla19@tcd.net>
Message-ID: <324DD089.6E1D@tcd.net>
Source record: 80074

Looks like the sale failed on some of the cartridges I listed earlier,
and have dug out a couple more..these are straight 400-800+ carts and
can be used in the XL series.

2 Pacman..
1-Gridrunner
1-Donkey Kong
1-Delux Invaders
1-Donkey Kong Jr
1-Telelink II
8-Atari Logo
1-Joust
1-QIX
1-Music Composer
1-Kindercomp

Cartridges Only No docs..

Now for the 410/1010 Recorder...tapes
1- An Invitation to Programming
1-Introduction to Sound (cont)
1-Introduction to Graphics
1-Writing Programes One
1-Writing Programs Two.
No Docs, tapes only in cases..

1- 600XL Computer power supply and Video cable
4- 1200XL Computers power supply and Video cable
3- 800XL Computers power supply and Video cable
3- 130XE Computers power supply and Video cable (stock not modified)
1- 130XE Computer power supply and video cable...Modified 320K

2-1050 Disk Drives Stock
2-1050 Disk Drives modified double density
2-Indus Disk drives...stock
1-Indus Ram Board..software but no docs..
2-Traks..double density disk drives..
2-Rana Double Density Disk drives..
2 Atari 810 Disk Drives..
Boat Anchors..
1-410 Atari Recorder
2-1010 Atari Recorder.

1-850 Atari Interface
2-Atari Third Party Printer interfaces
Atri 835 Modem with cart power supply..

1 MPP 300b Modem
2 Acoustical Modems..

Plus some more to be found in the closet..shed??
Bob

Hmm. Let's see. EITHER I can pay $50 (used) and get a three-ring
binder
thrown in, or I can pay $15 and get it still shrink-wrapped from Best
Electronics.

Wonder which way to go?

Let's see, figuring on the low end that's:

(140 sect/second)(256 bytes/sect) = 35840 bytes/second !!!

So to save or load the ENTIRE contents of the computer (including the OS
and the like) would take at most UNDER TWO SECONDS.

Wow.

Date: 1996-09-28 00:00:00 UTC
From: NothingMore@worldnet.att.net
Message-ID: <324cafc7.68619505@netnews.worldnet.att.net>
Source record: 80137

Not too long ago a friend of mine sent me computer software
emulating atari games. However since then i've had to reformat my
hard drive and i lost all of the files. I've looked for hours on the
web and i can't find any files or zips containing the system or the
games. More than likely i'm missing some info that's keeping me from
getting the correct web pages or ftp sites. Does ANYONE know a web or
an ftp site that contains a good old fashioned atari 2600 emulator and
some games??? Please send any sites you know of to
NothingMore@worldnet.att.net. All help is greatly appreciated!
Thanks in advance,

Message-ID: <01bbad09$00b08560$1df7aecc@blackat.direct.ca>
Source record: 80140

```
DIMS'96
-------

This is a BETA copy...
Unfortunalty this is also the only documentation you get right now! =)

You can run DIMS'96 by double clicking on it, but that will only
get you into the unfinished shell I am writing.

To access the disk images simply drag-n-drop an XFD,ATR, or DCM file
onto the program. If you pass it a ZERO-byte .XFD file it will ask
you to format the image. (thus new images can be instantly created)

Using DIMS is easy..all the menu items are very explanitory!!!

One note... when you add files any long filenames are truncated at
8.3 characters. NO CHECKS ARE MADE FOR DUPLICATE FILENAMES. (but
you can right click on the file and pick `rename`)

When you extract files they are extracted with brackets around the
filename - (dos.sys) - so that way Win95/NT won't think that it's
a system file and hide it... when you add the file to another disk
DIMS will automatically remove the brackets...

Other than that, i hope this is helpful... once i get it written
in VC++ i may be able to do ports to other systems... right now you
need Win95/NT...

Source record: 80141
Body handling: Inline uuencoded payload not displayed: DIMS'96.zip

Please try the following attachment... it is a new disk image editor i am
writing,
it supports XFD,ATR, and de-compresses DCM's.

It is currently written in Visual Basic v4.0 Pro but I am in the process of
re-writing it
into Visual C++ v4.0 Pro becase VB is not quite powerfull enough.

Comments are appriciated...

Hi again,

If you need the VB v4.0 runtime files (ie: DIMS gives you Can't Find
DLL/OCX errors when you try to run it) simply grab the following ZIP and
extract into your Windows/System directory and then run DIMS... if it still
wont work... e-mail me!

2445. Y-Adapter?

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-28 00:00:00 UTC
From: jblenkle@calweb.com
Message-ID: <52ikd9$m6r@news.calweb.com>
Source record: 80146

Does anyone know if there is a Y-Adapter type cable available for the Atari 800xl. I have both a printer interface and modem I would like to plug in, but only have one remaining I/O port to work with. If there was a cable to plug into the port that then had two ends on it so I could plug in both devices it would make life a lot easier.

2446. Disk Formats for differnet DOS'es

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-28 00:00:00 UTC
From: BlacKat <blackat@direct.ca>
Message-ID: <01bbad11$99c69c00$1df7aecc@blackat.direct.ca>
Source record: 80147

Hello everyone,

If anyone has the disk formats for the differnet DOS'es out there (ie: AtariDOS, MyDOS, SpartaDOS, etc) could they either post them here or e-mail me the specs? I need this information to support more than AtariDOS v2.x in my Disk Image program (DIMS)

Also, if anyone has any info on how to construct a cable to talk to Atari 8-Bit drives and how you go about sending/recieving data i would like to add this feature to DIMS...

Thanks in advance!!!

Dear John,

I have been indirectly involved with the IANet since day one. The IANet was an outgrowth of NEAR*US network on the northeast coast. What transpired is now history; there is little reason for any of us to look back. You can be assured that much more went on to cause hard feelings, than what you read in the networked bases.

Using the Internet for Pro networking was suggested by many people over the years. It is especially cost effective for connecting to Europe. The biggest problem was everyone was big on suggesting it, but no qualified programmer was willing to devote several months of his or her life, to tackle the project.

Take care, Jon

2457. Re: bincancel:14 large binaries:AR617:@@NCM

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-28 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-617.a@redpoll.mrfs.oh.us>
Source record: 80158
Cross-posted to: alt.retromod,comp.infosystems.www.authoring.html,comp.sys.atari.8bit,matketplace,rec.antique,rec.arts.disney.parks,rec.collecting,rec.martial-arts,rec.music.makers.songwriting,rec.parks.theme,rec.sport.pro-wrestling

Large binary posts do not belong in unmoderated discussion groups.

I run a program that searches for, and issues advisory cancels for,
large binaries in the akr, biz, comp, misc, news, rec, and sci
hierarchies.

I have issued 14 cancels for large binary files (average size 441,317
characters - total size 6,178,440 characters) posted to 10 different
unmoderated discussion groups in the comp, misc, and rec hierarchies
(with cross-posts into matketplace groups) as follows:
3 rec.martial-arts
2 rec.music.makers.songwriting
2 comp.sys.atari.8bit
1 rec.sport.pro-wrestling
1 rec.parks.theme
1 rec.collecting
rec.antique
matketplace
1 rec.collecting
1 rec.arts.disney.parks
1 misc.test
1 comp.infosystems.www.authoring.html

The cancels in non-targeted groups are a consequence of the way
cross-posts work. A cross-posted article has only one Message-ID.
When it is canceled from one group it is canceled from all groups.

This pointer is being posted to each affected group listed above,
with the exception of test groups. Follow-ups are directed to
news.admin.net-abuse.misc.

If you want to see exactly which file was deleted from a particular
group, read the full report in news.admin.net-abuse.announce. The
full report can also be found in alt.nocem.misc and alt.retromod.
Look for AR617 in the subject, or, if your reader supports it, use
this <URL:news:ARMM-Report-617@redpoll.mrfs.oh.us>

The criteria used to search for this batch of large binaries were:
NEWSGROUPS: Unmoderated akr, biz, comp, misc, news, rec, or sci
(except for comp.binaries.apple2, comp.bugs.2bsd,
and rec.games.bolo)
BINARY: base64, binhex, uuencode, and xbtoa encoded files, etc.
SIZE: > 100,000 characters [(size * (# of parts - .5)), if multi-part]

If you must post a binary to Usenet, please post it *only* to an appropriate binaries newsgroup such as alt.binaries.misc, and do *not* crosspost it to non-binaries groups. Then, if you like, post something in the appropriate discussion group telling people where to find the binary in the binaries group (a pointer to the binary). This will permit news administrators and users to decide for themselves whether to receive the binary files.

For more information about binary cancels, see the bincancel FAQ, <URL:http://www.geocities.com/Paris/5886/binfaq.txt>.

Please direct public feedback to news.admin.net-abuse.misc and private feedback to red@redpoll.mrfs.oh.us. In the interests of preventing cross-posted flame wars, please honor the followup-to header and do *not* cross-post your reply to multiple groups. Thanks for your cooperation.

Best wishes,
Dick

I tried AT&T. No luck. There's a guy who has a program that automatically searches for large binary files and cancels them. He says that they don't belong in unmoderated discussion groups.

I guess you need a different form of distribution.

Hi!

I recently plugged in my Atari 130XE, and instead of getting BASIC after powering up, I instead got the Atari Memory Test screen. After watching the test, I was stunned to see that most of my RAM blocks were bad!

My question: is there anyway to fix this problem? All 48k blocks of RAM were bad - with the exception of blocks 1, 13, 21 and 22.

Any advice? Or should I pull the plug on this patient and give it a proper burial?

TIA

> programmes accessing the OS (and DOS) in ilegal ways making later (D)OSes
> incompatible.It gives jump points into the handler subroutines,
> (like one to print as character to the screen)
> DUP routines and BASIC routines.
>
Hey! Don't kill the messenger! If people choose to use jump points into the
OS that's their choice. It's the same with PC DOS: you use the routines at
your own risk. But it wouldn't be proper not to include the locations in a
book that attempted to be comprehensive. Think of it the other way round...
knowing people were using these routines, why did the OS designers decide
to change their locations? Besides, it gave hackers something to do, to
come up with patches...

Cheers.

Taking 5 minutes to read what follows can change your life :

"I read an article, someone had kindly posted on an Internet
newsgroup, describing how to send A ONE DOLLAR BILL TO ONLY
FIVE PEOPLE AND MAKE $50,000 IN CASH WITHIN ABOUT 4 WEEKS!!"

OK. Here's my try. I just sent $5 to five different people
around the world.

Why should I do it? Here's what I think :

I don't typically trust "get rich schemes". We've all seen
them on late night television -and we've all tuned them out.
The difference with this was it was only $5.00 --the cost of
a lunch, and a quick turnover.

What if nobody responds? Well, I am responding already
-- other people did too. And, even if the amount returned
is not as great as folks tell us -- even if it's only $2000,
$1000, or even $500 -- I would just put in $5 on the
possibilities. And, think, what if it IS true and $50,000
comes in about four weeks.

OK, so maybe $50,000 in cash is a tough amount to reach, but
it doesn't keep me from trying.

Well, I don't know about you folks, but I will do it, so
plenty of other people must be doing it too. I think they
are helping themselves and others.

The remainder of this article is a message from someone else
who knows better how it works.

I read an article, someone had kindly posted on an Internet
newsgroup, describing how to send A ONE DOLLAR BILL TO ONLY
FIVE PEOPLE AND MAKE $50,000 IN CASH WITHIN ABOUT 4 WEEKS!!!

Of course, I thought this was rediculous at first. Then,
after a short period, I saw another one in a newsgroup I go
to a lot. The more I thought about it, the more I became
curious. I thought, "I have already heard of such things
-- but on the Internet ?!?!? Maybe this is legitimate!"
Besides, what's $5,00 ? I decided that even if I had to
throw $5 into the fire, I wouldn't mind it much, and gave it
a try. After all, I needed a LOT more than five dollars.

I carefully followed the instructions and then waited to watch the money come in ... prepared maybe to receive about $1000 to $1500 in cash or so ...

Two weeks later, I began receiving money. It was indeed unbelievable! What a welcome surprise when those envelopes kept coming!! I knew what they were as soon as I saw the return addresses from people all over the world -- most from the U.S., but some from Canada, even some from Europe, Japan and Australia! I tell you, THAT WAS EXCITING !!

Soon, hundreds, and then thousands of dollars began to roll in like an avalanche! So -- how much did I get in total ? $1,000 ? $5,000 ? Not even !!! Within 4 weeks, I had received a total of $32,445 ! My bank account changed its "-" into a big "+"(++++)!!! I bought myself a car and things I wanted for a long time for my wife and kids!

There is not any reason why the same shouldn't happen to you. If you're not interested then don't participate.

It seems to work for other folks:

* Mike Walsh -- claims that he recd nearly $47,000
* Markus Valppu -- says he made $57,883 in four weeks
* Dave Manning -- claims $53,664 in same amt of time
* Dan Shepstone -- says it was only $17,000 for him
* Oliver Arcadipane -- claims $32,445 within four weeks

Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense, that I'm taking a similar chance with $5 of my own money. Not a big chance, I admit -- but one with incredible potential, because $5 is all anyone ever risks -- PERIOD. That's all Mike, Markus, Dave, Dan, or Oliver needed, yet their $5 netted them tens of thousands of dollars each.

So, how do you do it, you ask? It's truly simple. Go ahead and get a printout of this information:

STEP 1

Write the following on five separate pieces of paper:

a) a name, address, and e-mail

b) name of the newsgroup where you learned of it

c) the words "PLEASE ADD ME TO YOUR LIST"
(You are not just sending a dollar to someone;
you are paying for a legitimate service.)

d) as a courtesy, also write the position their
name was in: "You were in position 3"

STEP 2

Now, fold each piece of paper around a $1 dollar bill (no checks or money orders), and deliver them on the way to the following five people. Folding the paper around the bill will ensure its arrival to an intended recipient. This step is important.

****
NAMES LIST NAMES LIST NAMES LIST NAMES LIST
****

! ! HONESTY IS WHAT MAKES THIS WORK FOR YOU TOO ! !

1. Nir Levi,
PO BOX 342
Yavne, ISRAEL

2. Landon
#1 Lakeway Drive
Conroe, Tx 77304 USA

3. Olivier Arcadipane
237 rue Francois Andre
7390 Quaregnon BELGIUM

4. BTech
5641 Apgar St
Houston, Texas 77032 USA

5. Hugo Desmeules,
6100 Deacon apt 1-P
Montreal, Quebec, H3S 2V6, CANADA
.....

STEP 3

Now, listen carefully -- here's where you get YOUR MONEY COMING. Look at the list of five people; remove the top name from the list, and move everyone up one position. This way #5 becomes #4 and so on. Put your name, address, postal code, and COUNTRY in the fifth one on the list using a simple text editor.

STEP 4

Now, take this revised article with your name on the list and repost it to as many newsgroups as you can -- try for more than 200 newsgroups. There are at least 17,000 newsgroups, so it shouldn't be hard to find that many. Remember, the more groups you post to, and the bigger the newsgroup is, the more people will see your article and the greater probability they may send you cash!

If you wish to be anonymous, you may use a psuedonym. -- call yourself "The Boss" or something -- whatever,

just be sure the address is correct.

Give a catchy title -- something like "EA$Y MONEY", "FA$T CA$H", "NEED CASH TO PAY OFF DEBTS?". The more posts, the more money you may get -- and, of course, the more money others on the list probably make too. REMEMBER, BE HONEST AND EVERYONE MAY MAKE MONEY FROM THIS EASY CONCEPT. You can reap the benefits, believe me !!

Now, hypothetically, here is why it should work:

- Of every 200 posts I made, I received 5 responses. Yes only 5. You could make $5 for every 200 posts with your name at #5.

- Each person who sends you $1 now makes an additional 200 postings with your name at #4. ie. 1000 postings On average, therefore, 50 people could send you $1 your name at #4. $50

- Your 50 new agents make 200 postings each with your name at #3 -or- 10,000 postings. Average return 500 people = $500. They make 200 postings each with your name at #2 = 100,000 postings = 5,000 return at $1 each = $5,000.

- Finally, 5,000 people make 200 postings with your name at #1 and you could get a return of $50,000 before your name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS ! Total in one cycle $55,000

Remember 200 postings is only a guideline. The more you post, the greater the probability of return. Maybe it is possible to get $50,000 in cash -- I don't know, IT LARGELY MAY DEPEND ON THE INDIVIDUAL. You can follow-through and repost this article everywhere you can think of ! The more postings you achieve can affect how rewarding the experience will be. It's just too easy !!!

LET'S ALL TAKE CARE OF EACH OTHER BY JUST BEING HONEST AND BY PUTTING FORTH 150 PERCENT OF EFFORT. Please, don't take away the hope from deserving people, just like you, who did already put in their money the right way.

From time to time when you see your name is not still on the list, if you want, you can take the latest posting you can find and start all over again.

Let's review why you may want to do this. Almost anyone can afford $5 with the possibility of such SPECTACULAR RETURNS.

Some people have said, "What happens if no one sends me any money?" Big Deal -so you lose $5 -but what are the chances of that happening? Are you willing to try on the possibility of such BIG money as 50,000.00 $$$$???? -- all just for the microscopic amount of five separate dollars? Just think of all the new Internet users that join every day !!!

So, that's it. Pretty simple sounding stuff, huh? There are millions of people surfing the net every day, all day, all over the world. You know that -- you've seen the stories in the paper. There are millions of new net surfers every month !!! This is the great plus of the Internet -- people all over the world can hear you and will listen if you talk reasonably. If this wasn't the Internet, and was a smaller circle of people, the possibilities would be different -- if the amount of money had to be bigger, it wouldn't succeed. But here, on the Internet, it is a giant village, where thousands of members join every day! One can hardly lose !!

So pay off your bills and debts. HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY -OR- EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS (You can make up for it later). Then you can JUST SIT BACK, RELAX AND WAIT FOR THE RESPONSES TO ARRIVE !! The first one or two weeks will be slow, but it will pick up.

REMEMBER -- HONESTY IS THE BEST POSSIBILITY. YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY !!

****
ENJOY LIFE! YOU MAY WANT TO GIVE IT A TRY!

Hello all,

I recently bought a boxfull of Speccy bits and pieces. At the bottom
of the box I was surprised to find the following:-
---

1. ATARI COMPUTER CASSETTE UNIT (Phonemark)
Model No. PM-4401A
Requires Seperate 240V power supply. Has lead.
Has also data lead with plug as:-

```
__________
\ o00oo0o/ 0=empty, 0=connector used
\o0o0oo/
~~~~~~
```

In poly bag. Includes user manual.
This works so far as can be tried (FFWD, REWIND & STOP).

2. ATARI XC11 PROGRAM RECORDER
(for use -it says- with all ATARI 8-bit computers)
Only one lead fitted so power supply from computer (?)
Single I/O lead as above - but connections not seen.

In original box with User Manual.

No power supply so cannot test.

Neither seems ever to have been used. Almost certainly new.
Either or both can be had very cheaply. What offers?
Buyer collects.

CARDIFF UK.

I'll keep a lookout here for a while but (culpa meum) I'm not an
ATARI user so best e-mail.

--
Best wishes,
Mervyn Baldwin.

Joe,

There was a device called the Quintopus that was/is made by CSS. It basically was a board that gave you 3 or 4 I/O ports from one. I don't have the number for CSS handy (they are still in business). If you don't have it anywhere, e-mail me and I'll get it for you.

Sounds like you have more than just a need for additional SIO ports. Putting printer and modem interfaces anywhere in the SIO chain but FIRST may drain enough current to stop all your stuff from working properly.

CSS (Bob Puff) used to make a device called a Quintopus. It came with six SIO ports and some buffering. There was another model in which two of the ports are switched. I use that one. I connect the P: R: and my old, two-chip SIO2PC cable (a power hog) to the switched ports. I have an additional printer interface (XEtec) in a third, D1: in a fourth, D2: in a fifth. The sixth connects to my computer.

Best Electronics also had a kit at one time that you could build to do something similar, but without as many ports.

You are aware that this won't change anything? You may declare
prototypes or external references as much as you like, the code won't
grow until you actually *use* these references.

The problem of printf() is not, that `stdio.h' declares a bunch of functions,
but printf() depends on -buffered I/O, -string operations, -floating
point operations etc.

Hi all. THIS is my stupid problem.

Since owning my first Atari, I now use the DVORAK keyboard layout.
Which is no a problem on the PC computers cuz they got LOTS of memory
space to waste.

But what I would LIKE to do would be to remap the XL keyboard with the
DVORAK layout (long touted, but never used) then dump it to disk ala
the "Translator."

Then when I boot up with the DVORAK Translator disk, I should in
theory be able to use it with any commercial program.

SO.... anyone know how to do this.

(BTW, this would also be helpful to those of us who are now used to
the PC keyboard with characters in all the different places.)

I was fairly caught up and in the middle of the entire IAN/USF debacle. It primarily revolved around a bunch of closed minded people who didnt want to use the Internet as a means of transport. In addition, in my opinion, many of the sysops involved didnt even know what the Internet was, so the introduction of a foreign transport embarrassed them, due to their ignorance, so they responded in anger.

Ian! This would be a great idea! Mapping the Atari is the
single most important and useful book ever written and compiled
for the 8-bits. The use of a hand-scanner would probably be
the easiest way to go about it.

(How about contacting the "authors" of Mapping the XL? If
I understand correctly, much of the text in their "book" (disk)
could be rearrainged and voila! you have Mapping the Atari!)

Step 1: Copy OS ROM to the underlying RAM

Step 2: Rewrite the 192 byte table at 64337 (pointed by 121,122). Or,
get the 1200XL addition to the OS source code and there's a program to
give the DSK. Or better still, burn a new EPROM (27128) to do it... or
use the Static RAM Smaret socket circuit in Atari Classics...

The stock 520ST has 512K of RAM. The ST really needs at least 1MB of
RAM to be useful for most applications, but some games will run on 512K.

>not?)

Frogger was both a cartridge (from Parker Bros.) and a SuperCharger tape.
A comparison between the two was made in the latest issue of 2600
Connection. Apparently the SuperCharger version blows away the excellent
Parker conversion, offering graphics, sound, and animation almost up there
with the computer version. But then, the computer version could have been
better in the arcade-authenticity department. Too bad the author isn't
around to ask about the few weird changes he made. <g>

Actually the 2600 only had 4K of address space, ALL of which was used
for the cartridge (the 2600 used a 6507 CPU, which is a 6502 with only
12 of the addressing lines connected). Accessing cartridges larger
than 4K requires bank switching. When Asteroids-- the first 8K 2600
cartridge-- was released, videogame mags almost invariably described
bank switching as "switching between banks so fast that it tricks the
system into accessing more memory". Ugh. I think at least one mag
even attributed the on-screen flicker to the bank switching (and not the
fact that the 2600 was putting the player's ship, UFOs, shots, explosions,
and about a dozen free-floating multicolored rocks on the screen all at
once using only two sprites).

The later 2600 cartridges (Solaris, Radar Lock, Road Runner, et al) had
ROM sizes in the 32-64K range. It's amazing what even the anemic 2600
chipset can do when given enough RAM and ROM to play with.

It all makes perfect sense. Several folks are working on 2600 emulators
for the PC, and this guy was wondering if it's possible to copy the Super-
Charger tapes to a file and plug them into one of these emulators
(doubtful).

No. That won't change even one bytes of the executable generated by
your compiler. As I just wrote in an anser to the posting you cited
above, the standard header files only contain *declarations* of
functions.

Writing

#include <stdio.h>

is much better than declaring functions like printf() yourself as in

extern void printf();

as it avoids the two mistakes you made in that declaration.
printf()'s return type is int, not void. Also, in an ANSI C
environment your declaration isn't complete and therefore wrong, as it
should read

int printf(const char *fmt, ...);

By including stdio.h you normally get the correct and complete
declaration without the fuss like

```
#ifdef STDC
int printf(const char *, ...);
#else
int printf();
#endif
```

I'd be willing to put in some time marking up ASCII for TeX or LaTeX,
which will both (by design) be around longer than the Micro$loth
text format du jour. And if there are any real TeXperts out there who'd
like to bicker about how to go about it, feel free to email me.

Source record: 80024

Help!

I recently moved home and have lost the floppy boot disk for my Atari 1040ST.

Is there anywhere on the Net that I can get a download of the necessary boot software? If so, will I be able to get it off my PC running Netscape and onto a floppy disk in the right format for the Atari to boot up from!!!

Any help gratefully accepted.

Regards,

John White

Actually the 2600 only had 4K of address space, ALL of which was used
for the cartridge (the 2600 used a 6507 CPU, which is a 6502 with only
12 of the addressing lines connected). Accessing cartridges larger
than 4K requires bank switching. When Asteroids-- the first 8K 2600
cartridge-- was released, videogame mags almost invariably described
bank switching as "switching between banks so fast that it tricks the
system into accessing more memory". Ugh. I think at least one mag
even attributed the on-screen flicker to the bank switching (and not the
fact that the 2600 was putting the player's ship, UFOs, shots, explosions,
and about a dozen free-floating multicolored rocks on the screen all at
once using only two sprites).

The later 2600 cartridges (Solaris, Radar Lock, Road Runner, et al) had
ROM sizes in the 32-64K range. It's amazing what even the anemic 2600
chipset can do when given enough RAM and ROM to play with.

It all makes perfect sense. Several folks are working on 2600 emulators
for the PC, and this guy was wondering if it's possible to copy the Super-
Charger tapes to a file and plug them into one of these emulators
(doubtful).

> pretty lean program.

You are completely confusing things here. C header files don't
contain code for any function so the don't even produce one byte of
object code in the compilers output. Rather, header files only
declare function prototypes and symbolic constants and macros.
Functions for which the compiler sees the prototype in a header files
aren't linked to the executable unless there really used in your C
program.

The reason for program that uses printf() being somewhat large is that
printf() needs other *used* functions to be linked,
e.g. malloc()/free(), conversion functions for integers and floats to
ascii representation, which in turn use other floating point
operations.

It is possible for a programmer to produce an executable with unused
functions in it by linking object files which contain unused
functions. However, you can't "strip out" these unused functions as
you suggest in your last sentence as it is generally not possible to
find (by some algorithm) unused functions in a program.

The strip program doesn't strip machine code from an executable but
debugging information like symbol tables and information relating
machine instructions to lines in some source code file. This
information is located in special section of the executable which
aren't needed at runtime.

I hope this clarifies some misunderstandings.

Here...come sit down next to me on my rock of wisdom and I'll part some information that'll give you peace and harmony.

You see, the operating system known as TOS is 'built-in' your ST. Unless you had TOS 1.0, then it's a ROM chip in your computer. 99% of ST's are like this so you can just turn it on and still boot it up.

Boot without any disk though, and it takes forever. So stick in any formatted floppy including a blank one and it'll still work.

Ah...maybe you need the "programs" on the language disk? I'm sure Control Panel is floating around somewhere on the Net or PD disks. As for ST Basic and that Sample program, you're much better off without them!

I do hope this has been of some service... :)

Gee I love helping out newbies...

Frank Cohen did "Clowns & Balloons" for DataSoft. I think Steven
is confused, no other packaged games of that type for A8s. Perhaps a
magazine game?

"Pinhead" is a game from Utopia (of Montezuma's Revenge fame)
and is a port of the arcade game Kick-Man.

I'd like to point out that PB's Frogger cart has better music than most
games on the 2600, and Sega's Frogger had to sacrifice the bassline for
all of the music in order to have sound effects.

I guess you can't have everything.

I've read about (but not tried) a ZX Spectrum emulator for the Mac that
lets you read tapes through the audio port. It sounds absurd, but
apparently it's possible. See
http://www.cs.csubak.edu/~jstiles/emulator/zx/index.html if you're
curious.

```
The source code for the latest version of Atari800 can be downloaded
from my web page. There is also a binary version for MS-DOS at the
same location.

http://www.signus.demon.co.uk/david/atari/atari.html

Changes in 0.6.0
----------------

- Emulator can now be compiled for DOS using the DJGPP port of GCC (Thanks
to Ivo van Poorten)

Thanks to Maximum Entropy for he following Changes:-
- Implementation of Disable Drive menu item for Motif.
- Fixed scrolling problem for machines that can't access longwords on word
boundaries (e.g. SGI and SPARC).
- Added FPS Monitor to X11 and Motif versions.
- Changes to pattern matching for H: device.

Changes in 0.5.5
----------------

Thanks to Maximum Entropy for the following Changes:-
- Various corrections to MOTIF code.
- MOTIF callbacks for Insert Disk, Eject Disk and Insert ROM
- Bug Fixes in sio.c
- Bug Fix to devices.c allowing DOS 2.5 to get a directory of H:
- Bug Fix to monitor.c (EOF on INPUT + Blank Lines)
- Undocumented commands added to monitors HELP command.

2511. Clowns & Balloons games on the Atari 8-bit

Newsgroup: comp.sys.atari.8bit
Date: 1996-09-30 00:00:00 UTC
From: steven@rain.org
Message-ID: <52nff4$6tf@news.rain.org>
Source record: 80100
Cross-posted to: alt.atari,alt.binaries.comp.atari8bit,comp.sys.atari.8bit,rec.games,video.atari,tri.comp.atari

One of my old, favorite games on the Atari 8-bit was a game where two clowns bounce around the screen on a see-saw and pop balloons flying above. I played it so long ago that I can't remember the exact title. I always thought it was called "Clowns & Balloons". In the arcade this game was called "Circus". The Commodore 64 version by Bally Midway was simply called "Clowns".

After searching long and hard for Clowns & Balloons on the Atari 8-bit, I finally found someone kind enough to send it to me. Unfortunately this game called "Clowns & Balloons" was not quite the same. Instead of two ledges where the clowns would dive off onto a see-saw, there were two ladders, only one of which was ever used, and a clown would jump onto a trampoline held by two other clowns. While this game is fun and playable, it's not quite as fun as the old one I used to play.

Could someone help me identify the correct name and software company which made the Atari 8-bit version of this game that I remember? Once I know what to ask for, then I can keep asking around for this game. By the way, does anyone know how many versions of this game were made for the Atari? Clearly there are at least 2.

You're looking for "Pinhead", by (aargh! Brain lapse!) some guy who
wrote a number of pgms for the 8-bit, then went to the ST and wrote a
Dbase type pgm... Frank someone?

: urs

If I remember correctly, CC65 is a port of Ron Cain's Small-C.

This means:

o No ANSI C function prototypes
o No ANSI C function declarations
o No floating point support
o No n dimensional array support (one dimension only)
o No pointers to functions
o No typedefs
o No structures
o No enums
o No void type
(etc)

It's a rather limited subset of C.

Toshi

: >Are you kidding?!?
: >That was what turned me off of the ST.It didn't come with a DUP (command
: >processor).You had to get one seperately.

: Whoa! And the 8-bit comes with a command processor? Atari DOS 2.5?

uh,yeah,it came with DUP.SYS. (incredibly anoying scrolling,though)

: And the PATH was set to "A:\".
: >(I guess they never thought that anyone would have a hard disk)

: So change it in the startup, no big deal. That's how every other OS does it.

How do you change the path?
I can change it from PC-Command but of course then I have to stay in that
or lose the path.

: Back in 1985, a 10MB hard disk cost around $1000, more
than the ST.
: Natuarally the ST had to be geared towards floppy use, because most ST users
: wouldn't be able to afford a Hard drive anytime soon.

: The 8-bit certainly wasn't designed to be used with a harddrive either.

: >So,if you used a hard disk,the extention-asociation thing was useless
: >unless you edited the configuration file yourself to specify a direct path
: >to the programme.
: >SpartaDOS was so much easier to use with a hard disk.

: *ahem* SpartDOS did not come with the 8-bit, you had to buy it separately.

Well,it's free now.

: You could get a powerful command interpreter for the ST, like GNU's BASH, for
: nothing. This is a real Unix interpreter.

: I don't understand your line of thinking. You are criticizing the ST's
: operating system for lacking features that the 8-bit was even more lacking in.
: To get the features you want, you have to get add-ons for both systems.

The point is that the atari came with a command processor (however primitive),
and it let you do stuff.It could've been better,of course.
While GEM may let you do everything that DUP does,it needs to do more
since the ST has more features.It should at least let you set enviroment
varribles.It should at least be as good (and as easy to use) as the
PD/shareware stuff for the Atari. (that came out before GEM)

Even a MyDOS DUP.SYS would make it nice.
(it is a EASY to use CP)

Come to think of it,I hated AtariDOS's CP as well.You'd do a directory and then use "L" to load and the filename would scroll off.(argh!)
Still,it let you do everything.

Still,what about not having a text mode?
Or does everyone just refrain from using it?
(term programmes were so slow!)

And using MS-DOS disks!?!
You can't undelete files.
And the whole pathname has to be stored when CHDIRing.
(rather than just storing the first sector of the directory (ProDOS) or of the directory's sectormap/FAT (SpartaDOS))
That's why you're limited in how long a pathname you can have for a current directory.

Oh yeah,and you had to change the graphics mode for a game beforehand (at least with some).

I'm not sure about this,but I don't think that devices can take filenames.
(DOS is built-into TOS rather than being a device)
This,assuming that TOS is totaly like MS-DOS,as it seemed to be to ne.

It's the akward CP and graphical text that really bothered me,though.

: >own kind of thing (RGB?))

: Yeah, it's analog RGB.

: I use my Atari, which has the Super Video 2.1 upgrade installed, with
: a Commodore 1702 monitor (in the split video input) and get no
: artifacting. Surprising the number of games that rely on that (probably
: mostly apple ports) when they could just as easily have used mode "7.5".

Well you're really meant to use it with a TV or similar device.
The artefacting is a feature,not a bug.It allows high ressolution with
colours without using 16k of RAM and hence slowing down the computer.
(more memory to DMA,more time spent DMAing graphics per second)
If the artefacting bothers you,you can just turn down the colour.
(for instance,in a 80 column programme)

If you mean mode 15,that's 160x200x4,and mode 8 gives you 320x200x4.
(the reason that the manual lists 192 instead of 200 is because that,by
default,the OS leaves off the last 8 lines.Games can overide this as well
as using more than 200 lines (and more than 160 colour clocks/mode 15 pixels))

: AFAIK, the Apple IIgs uses the 65c816 chip, the same as in upgraded
: Ataris
: (with the Sweet 16 or something similar). By the way: the 6502 code is

You're think of the Sweet-16 interpreter for the Apple.
The Atari 86816 upgrade is called Turbo-16 and I thought that DataQue
had a C compiler for it.The turbo-16 includes a OS that takes advantage
of the extra features of the chip.

: much
: shorter than INTEL's or MC680x0's. A program, that uses about 100k on a
: PC,
: on the Atari takes about 30k or something. Anyways, the PRINTF routine
: is inside
: the SpartaDOS X and actually it does not use 40k of RAM.

That's what I've been trying to tell people.
I seemed shocked at the HUGENESS of PC programmes which PC'ers aparently
take for granted.But I do have some nice small PC programmes.My Multiplan
works on a 64k PC (presumably,using DOS 1).
Where as I've heard of Spreadsheets (that's what MultiPlan is,by the way)
taking up MEGABYTES of RAM.(it was for Windows <sneer>)

: Isn't it much easier to port the gcc to the 65c816 (with it's 16 MB
: address
: space, 64k stack, 16-bit registers etc.), before anybody can port it to

: the
: 6502? 6502 has a C compiler yet: it is the CC65. Additionally, there
: exist
: several good programming languages for the 6502, such as the Action!,
: Forth,
: or at least the Turbo BASIC XL. At the other hand, most people I know,
: write
: 6502 applications just in the assembly language. But there is no good
: programming
: language, that produces the 65c816 code (except for the assemblers like
: the MAE).
: So it would be nice to have the gcc for this chip.

You have a couple of choices, try to replace the bad RAM and/or address
decoders or buy another 130XE. I bought a 130XE at the Trenton Computer
Fest alst April for $5.00 w/PS and it works just fine. This may be your
best choice, if you haven't modified your old one. (RAM upgrades, dual
pokey, etc)

2.5's DUP.SYS is *NOT* a command processor, it is a poorly writen
menu-interface. For instance, the 'L' option lets you load a file.
A REAL command processor would let you do: "L filename.ext"
try that with 2.5's DUP.SYS, and it'll freak out.

My point is that you have to get replacement software on BOTH systems to
get decent functionality. It's not really fair to say that the ST sucks
because it didn't come with SpartaDOS-like functionality when neither did
the 8-bit.

>(for instance,in a 80 column programme)

It's a bug, not a feature, Dan. You're talking like an Apple person.
To the extent one can try to turn artifacting into something useful,
it is unreliable (since it depends heavily on how a TV is adjusted and
on the particular 8-bit model since the video amplifiers are different
between the 400/800, the 1200XL, the 600/800XL, and the XEs) blurry,
and doesn't give you nice colors.

>If you mean mode 15,that's 160x200x4,and mode 8 gives you 320x200x4.

Nope. Mode 8 gives you 320x200x"1.5" (two intensities of the background
color). If your display artifacts badly enough to give you four distinct
colors, you're effectively getting 160x200x4.

Somewhere I have a hack of lode runner than runs in a true 4-color mode.
It's beautfiful. Would be nice to see the same thing done to Pinball
Construction Set.

Brent

Yes, 180 (up to 200 with a clever caching), I totally agree. But no matter,
if the sectors are 256- or 512-bytes long. So a DOS working with 512-byte
allocation units wouldn't read 180sect.*256bytes = 36k per second (as existing
DOSes do), but 180sect.*512bytes = 72k per second!!!

I do not think so, I know it for sure. Of course, there must be a bit of
internal cache inside the drive... ;))) Otherwise the speed won't be
so great due to an inconvenient interleave.

Why not use a disk/file OS emulator?
Though,acording to "Mapping the Atari",even the small difference between
revission A and B cause some software not to work.
So you should look into both versions of the OS.
(they aren't really emulators,they ARE the old OSes.
the XL already emulates the 800 OS,but some games want the real deal!)

2532. Re: BASIC XL ROM image?

Newsgroup: comp.sys.atari.8bit

Mark L. Simonson (marksim@bitstream.net) wrote:
: A couple months ago there was some discussion about how to extract the ROM
: image from a BASIC XL cart for use with Rainbow. Has anyone done this
: successfully?

: After reading through notes from Chris Lam and Bill Wilkinson's discussion
: about supercarts here, I thought I figured out a way to do this without
: programming using something like this:

: Start up with BASIC XL, go to DOS, choose option K using:
: <dummy filename>,D501,D501
: This should enable the cart with bank 1 selected (any read/write to D501
: supposedly will do this)
: Write the cart address space to disk using option K again:
: BASICXL1,A000,BFFF
: Repeat procedure for D502 (to select bank 2) and D503 (to select bank 3),
: writing the ROMs to disk each time.
: Finally, transfer the files to my Mac and stitch them together.

: Well, it didn't work. Is there some reason why this shouldn't work?
: Chris's suggestion was to write a short assembly language program to
: switch in the banks one at a time, copy the ROMs to a different area in
: RAM, and then switch to DOS and write that area out to disk. I thought I
: figured out a short cut...:-(

Since all the banks of ROM contain ML code assembled to run from that address,
they can't be loaded at any other.
All the banks have to be at the same address.You need a emulator that
emulated multi-bank carts.

Thanks Maddog - "language disk" sounds pretty familiar, now you mention it!

Does this mean that when TOS loads, the first thing it does is look for a program to run off the system drive (in my case the floppy)? Does the floppy need to be "primed" in any way - e.g. to designate it as a "boot program" disk? How does the Atari know what to load off the disk??!!

Anyway, my general confusion aside - I guess I need to change my request to......

HELP!

Please can some kind sole post a copy of the "Control Panel" program for my Atari 1040ST?

(P.S. If I download it onto my PC, am I still going to hit problems transferring it from MS-DOS format into whatever format the Atari floppy drive is expecting?)

Again, any further invitations to visit "wisdom rocks" most gratefully received.

Thanks

John (all I wanna do is get my Cubase up again!!!) White

: In fact, even if your use of printf is simply for output of character
: strings, all the other functions that printf _could_ use is pulled in
: such as all the string scanning, floating point support, etc.

Actually,the Atari already has floating-point built in.
(not incredibly fast,though)
The "Floating Point Package" also allows conversion of 16-bit intergers to
floating-point and floating-point to text.
Hence programmes can easily print out error messages without including a
printf-like function.
(from a assembly programmer's view-point)

>you suggest in your last sentence as it is generally not possible to
>find (by some algorithm) unused functions in a program.

If you say: "It is generally not possible to find (by some algorithm)
all unused functions in a program." you are right. However in practice
it is possible to find almost all unused functions in a program:

It's no problem to build a call-graph for a program by simply looking
at the syntaxically structure (doable in linear time, because all struc-
tured programs have limited treewidth! See
http:www.diku.dk/users/stephen/papers.html for a paper about this discovery)
and then perform a spanning tree from the function main(). This will catch
a superset of the functions actually needed, but seeve out a lot of the
unused ones.

With respect to determining whether floating point routines should
be linked into a c-program because of the printf-statement, this problem
can also be solved good enough for practical applications on the syntaxical
level: Using variable scope and inspecting parameters for printf-calls.

No problem to do this teoretically. Notice that by looking at the problem
from a syntaxical view, it's pretty simple to do. We don't do it perfectly,
but we do it good enough for practical purposes.

Greets,

Asger Alstrup

: >: artifacting. Surprising the number of games that rely on that (probably
: >: mostly apple ports) when they could just as easily have used mode "7.5".

: >Well you're really meant to use it with a TV or similar device.
: >The artefacting is a feature,not a bug.It allows high ressolution with
: >colours without using 16k of RAM and hence slowing down the computer.
: >(more memory to DMA,more time spent DMAing graphics per second)
: >If the artefacting bothers you,you can just turn down the colour.
: >(for instance,in a 80 column programme)

: It's a bug, not a feature, Dan. You're talking like an Apple person.
: To the extent one can try to turn artifacting into something useful,
: it is unreliable (since it depends heavily on how a TV is adjusted and
: on the particular 8-bit model since the video amplifiers are different
: between the 400/800, the 1200XL, the 600/800XL, and the XEs) blurry,
: and doesn't give you nice colors.

: >If you mean mode 15,that's 160x200x4,and mode 8 gives you 320x200x4.

: Nope. Mode 8 gives you 320x200x"1.5" (two intensities of the background
: color). If your display artifacts badly enough to give you four distinct
: colors, you're effectively getting 160x200x4.

Right,two brightnesses and two artefacting colours=four. (different settings)
How do you figure that.If you take advantage of artefacting you still get
the same resolution.Try this.
```
10 GR.8
20 COLOR 1
30 PLOT 10,10:DRAWTO 10,30:DRAWTO 11,30:DRAWTO 11,50
```
You'll see two different colours but the lines don't "line up".

: Somewhere I have a hack of lode runner than runs in a true 4-color mode.
: It's beautfiful. Would be nice to see the same thing done to Pinball
: Construction Set.

OK OK,it's "three colours,one of which is represented in two intensities".
It still gives you four colour/brightness combinations and sharper
resolutions.
("colours/intensities" is what PC people usualy mean by "colors")

Maybe your TV has the brightness knob up to far if the colours are really
"bleeding".

That's the point of a mouse driven interface, you don't 'need' to type in complicated commands or even files just to copy a stinking file. By your own logic then the Mac is "not as good", and yet it has done more to introduce moer people to computing than anything done by IBM or Microsoft. Please remember that not everyone is as well verse in using computers as some of you are.

Yes, I am a big fan of batch files on DOS. And I would like to see them on the ST, but with my little mouse and menus it's not really necessary. Besides, if you want both mouse and batch files then you can always get Windoze 95...just drag a batch file onto desktop and double click. Maybe someday I write up a little program on my ST that can do that.

Tell you one thing though, once I got my ST...I never went BACK to AtariDOS menus. :)

> : > BUY A used 386 for heaven's sake!!!!

Gee, the old fat man must have gotten a Internet connection on the North Pole. I can see a little tiny elf boy using his account to sound like an idiot. :)

Well let's see...with my 130XE, I can buy all my favorite classic games at a good price and with a 386, I can't run any games at all! (Unless they are the crappy looking runs with CGA and all that crap).

So if you be nice enough to put a new Pentium under my Christmas tree, I'll end up geting an emulator as well.

But since you and other computer newbies were all brainwashed by Billionare Bill, I understand this to be a hard concept to be grasped.

Well, guess who's getting a lump of coal this year... :)

Playing video games when the rugrats were born...

Gee, since I got bored with the PB version of Frogger on the 2600...the
SuperChrager would have been much nicer to have :)

I once played Frogger on the 8-bit and it is good. If anyone is
wondering, I heard that the disk version offers better music since
there's more memory (32K vs. 8K)

Of course, Atari did had much better technology in the late 80's then the
late 70's and were able to do alot more with the 2600. The later games I
have(Midnight Magic and Jr. Pac-Man) are much nicer than their earlier
counterparts. Of course, they were also using the 2600 to compete with
Nintendo as well. :)

Get the SuperCharger CD, it has all the games in ROM images to be used on
the emulators. There is also MAKEWAV which turns images into SC sound
files and even a Game Genie modified images played through SC. So I'm
sure someone will soon come up with a SC to image converter in the near
future.

2556. SyQuest-44 HD Mech For Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-01 00:00:00 UTC
From: b.poehland@genie.com
Message-ID: <19961001223707.aaaa0058l@babyblue.cs.yale.edu>
Source record: 79945

SyQuest 44-meg Removable Media drive mech for sale.

Price: $65.00 (Includes shipping & tech docs)
USA buyers ONLY

This is an embedded SCSI drive mech that works splendidly with the Black Box.
(Any other host adapter, I don't know, but should work. The SCSI imple-
mentation in this drive is *very* robust, they seem to have satisfied the
SCSI protocol requirements extremely well.)
The form factor for this mech is 5.25", half-height.
Minimum power requirements: +5V/1A & +12V/2A, 4-pin IBM-style connector.

Optional items (prices include shipping):

44-meg removable media cartridge w/docs & case: $35.00
(Note: these carts are now second-sourced by Verbatim, $37 each from
Club Mac, Irvine CA 1-800-258-2622)

Custom steel case, beige-grey finish: $12.00

Custom installed in shoebox case w/power supplies & fan: contact me.

External IBM-style switching supply: $25.00

My apologies if the price for this mech seems a bit steep, but these suckers
weigh a ton & I'll take a clobbering on postage. USA buyers ONLY, please.

2559. XF551 Replacement Mechs 4 Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-01 00:00:00 UTC
From: b.poehland@genie.com
Message-ID: <19961001232825.aaaa006oA@babyblue.cs.yale.edu>
Source record: 79948

I have two brand-new 5-1/4" Mitsumi 360K half-height floppy mechs to sell.
These are original equipment replacements for the mech in the Atari XF551
floppy drive.

Price is $17.00 per mech, postage INCLUDED. :)

USA buyers ONLY, please.

Note: Although in theory virtually any standard half-height DSDD IBM-compat-
ible mech will work in the 551, in practice only the Mitsumi mechs
will fit. That's because only Mitsumi mechs (as far as I know) have
both the power & signal connectors on the right side. The short
length of signal cable from the 551 controller card (which saved Atari
all of what, 4 cents?) won't reach the connector on any other brand of
drive mech. (God bless Tramiel.)

Contact me by e-mail if interested:

: with the Atari 8bit and still USE them. To think that we are unaware
: of the world aound us is Stupid. Perhaps your the one that needs a
: Life.

Wait a moment... this one acualy sounds like it might be to ME :)

You see people.... I acualy have a PC-0 (Not just an XT but the origanl
IBM PC that needs a ram expander to get more than 128k)
I have also a PC-1 and a few XTs, 286s and I am using a 386...
Also I have 4 Vic20s 2 C64s a TI 99/4a
I am looking for a Timex sinclare and other such systems
(Don't bother offering to sell me your old systems I have some well
established routes to buying old computers and I pay well under
market price... best to look for colectors who are colectors first
bargen hunters second... I am bargen hunter first... thats why my colection
dosn't include an ST or an Apple... some people seem to know what they have)

I do better colecting video game machines... people thow them away...

Well knowing my fasination with old computers my grandmother got me
an Atari 800 (I am truely greatful... people who don't know what they
have in the Atari tend to also distory the machine.. so I can't get
any bargens on this thing unless I am willing to fix it myself...
and I found I am compeating with a lot of YOU GUYS for dead Ataris)

Now why would anyone want to use an OLD computer rather than an up to date
modern system with a flux capasiter and a trans gate generator...
(Can you catch my starcasum.. if not.. MultiTasking/MultiUser anchent
Unix and Concurent CP/M systems that I get for FREE tend to be a better
deal than Windows systems... the tendency for Windows to crash
and the tendency for free software for Unix,CP/M and many other OLD
computers that do me better than the $200+ software on the market)

Anyway.. I am much of a hacker to begin with... Using 50 computers
at once with 50 monitors is the kind of thing I like to pull...
But more often than not I can pull an old computer out of my stock
and use it for somthing when I can't do the same with a brand new
computer or it'll run me like $300+ to do it... and maby $500+
do get the specal hardware to do the task with out a computer...

Before the fire I had an array of computers set up to do the job
of "top of the line" tecnical gadgetury...

As many of you know you can take a sound blaster and make a O Scope
out of an AT with it..... I had an O Scope so I never bothers
but I may in the near future... the results would be alowing the computer
to do all the wonderful tasks of digital o scopes ranging from $500
to $900 while a new SB clone runs me more than $60...

Thats an example.... I got a Timex Sinclare for $10 and turned it into
a freqency counter ($300 for same hardware)
I used the Vic20 on a few occasions to test ciritry designes
(With out the safty fuses used in more modern equipment mind you
so I risked losing a Vic20 every time I did that... I still have
the spare parts in case I blow one of my Vics.. and I have more than
one and keep getting more)
But you get the idea... It's all about saving money for me...
But there is is a certen thrill with every new computer...
I get to play more video games... learn new design phlosophys
see the way THIS system was made any why it suceded (or failed) on
the market... and as with all home computers... what they did
to bring the price down and what they failed to do...
What sacrafices they made for preformence and what they did for price
and many have little tricks to keep price low and preformence hi...
The Timex Sinclare for example dosn't have a video prosesor per say
but uses the CPU to figure out how to display things...
The Commodore line relied on simple logic chips to get the most power
while Atari used more powerful logic chips that are probably computers
in there own right... Amiga made used of Co-Prosesors (I never had
my hands on an Amiga but I have the design specs)..
(Please no ST vs Amiga comments... I havn't any ST design specs only
price sheets and Atari was able to keep the price on the ST down
more than Amiga and there is somthing to be said for that.. I just
don't know HOW Atari did it)
From P6 to Univac there is a little somthing to gain from every computer
and a little somthing to learn...
I know people who still use Cp/m computers to do workprosesing
and to be honest.. for them Word for windows just isn't what they need.
A good dazy wheel printer and WordStar on an Osborn and they get all
there work done...

Then theres me... looking at ways to conect all thies computers
together to build one great big super computer....
Then there is a friend of mine.....
He did it...
I am green with envy... for all I know hes got his AI monster
running on the Internet right now....

Ok... well.. thats why I have old computers...
Power on a budget... the capabilitys of the old machines
with out the price tag of the curent...
And many times quality with out compramise... still at a low price
somthing I just don't find in computers today...

Jeff

Halliwell E Sra 436TS/TAC (halliwee@TS436.dyess.af.mil) wrote:

: Does anyone know where I can purchase a Commodore 1802
: monitor? Mine unfortunately died a couple months back. I'm
: guessing it's probably cheaper to buy another one than to
: even get an estimate on this one.

I don't know exactly what unit the 1802 was...
But I am aware commodore made many monitors...
At least 2 were composit monitors... You should be able to
get a TV set today that has a composit jack in the back

When making the C128 Comodore had need of a RGB Monitor...
This is the same as an IBM PC CGA monitor... getting a CGA
should replace that.... Commodores RGB monitor was also a composit
as the C128 needed two displays (Commodore put both in one monitor)
Presuming your needing this for an Atari computer.. you'll only need
one of the two...
Not familure with wether or not an Atari can make use of a CGA/RGB
display I'll make no guesses... But very few computers used more than
one display...

Commodore also had need of an analog RGB display for the Amiga...
This display could handle Composit, RGB (CGA) and Analog(Amiga)
It wouldn't be of any use to an Atari user to use an Amiga Analog
monitor...
Commodore also had need of a VGA display when making PC compatables
a new or used VGA should solve that...

In case you are in need of an Amiga monitor... Amiga is alive and well
even if Commodore is dead and you can probably get your hands on
a new Amiga monitor... just not the part number your asking for...

On the Composit displays... They are widely avalable for use in scurity
and for video aplications...
But you may want to look into some thrift shops.. they almost never
know what they have and may have an old old computer moniter for sale
cheap... just make shure it works... bring along an old VCR (leave in car
just so they don't hassle you... get permition to bring VCR in store
before doing so and if they have there own VCR use it insted...
test the VCR and Monitor with permition and infront of them so they
know the VCR is in great condition and gives a clear picture...
Umm maby you better not let them know it's the monitor not the VCR
your testing)...
Anyway... don't get anyone annoyed and if the price seems to hi or
if someone jumps out telling you all about it... Thies are red

flags that some tec type is working there and looking for a sucker
slowly and politely leave in this case becouse your not gona get a good
deal...
Your best deals are alwase when you know what they have and they don't
the reason being obveouse...
How ever... never... and I mean never.. try to rip someone off
If they are trying to get a good deal work with them... don't rip
you can miss out on good deals in the future if you abuse the situation..
The best case is when a person dosn't know what they have
and dosn't care what it's worth... they just want to get rid of it...
The $5 to $15 to $25 they ask isn't the reason....
It's the $10 to $50 the dump charges for throwing things away...
But as we all know... $25 in the pocket is alwase nice...
You have to expect the person your dealing with is a rather smart
person... The idiots cann't take care of a computer long enough
to get it to a yard sale....

It is. This comes from the Wired magazine article that was talked about awhile ago, the October 1996 issue. It should still be out, though I've not been to a few of the bookstores I frequent in the last couple weeks.

Bushnell started it around 1970, but it wasn't til 1972 when they brought out the game of Pong.

2568. fav 8 bit game

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-01 00:00:00 UTC
From: scharles@superlink.net
Message-ID: <32508558.6026222@news.superlink.net>
Source record: 80047

My vote for my favorite 8 bit game (that is, the one I come back and play the most is)
MATCHBOXES by Al Chesar
Who BTW has graciously given his permission for it to be included in the archive. Everyone d/l and enjoy!
p.s. I know, its a kids game, but I love the animation! How did he get all those shapes moving at once???

The Sweet-16 is from FIne Tooned Engineering, also for the Atari - it's
a 65816 daughterboard for the XL/XE line. No big release, not too many
were sold, no software ever produced... but I've got one!
```

2570. Re: XFormer 3.5

: screen fils up though or you get errors. I like it. I guess you can
: always learn something new. Even back space worked correctly. Wow.

: rely@ix.netcom.com -or- rsely@dhs.state.nj.us

Another thing.
You can use something like {
10 ?CHR$(125):TRAP 10
} then every time that pesky error-141 shows up,the screen will clear
before you can even see it.
Of course,all errors will clear the screen.You can simply delete line 10
with NEW or simply "10".Or you can use TRAP 33000 or any other invalid
line number to turn it off temporily.Obviously line 10 must be executed
with RUN or GOTO at some point to enable the error-trap.

Remember,this is for GR.17.
GR.18 will malfunction rather than giving error-141.

2572. Re: fav 8 bit game

Newsgroup: comp.sys.atari.8bit

My favorite game is BallBlazer. The whole package, the animation
the joystick-busting gameplay makes it, IMHO, the best ever.
Unfortunately, it seems there are many out there who absolutely
hate it. I even have a used copy of it where someone scrawled
"Stupid scrolling 2-player game". Their loss.

With 72k/second the Atari itself will be the bottleneck. I believe
the maximum speed is around 30k/second for the 1.79MHz 6502.

Freddy.

2578. XFD/ATR utilities - new site new updates!

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-01 00:00:00 UTC
From: Ivan Mackintosh <ivan@rcp.co.uk>
Message-ID: <3250D2C1.4DF0@rcp.co.uk>
Source record: 80057

Hi,

I now have my own web space which means that my XFD/ATR utilities site now has a *permanent* address! It also means that I have easy access to the site and can update it on a more regular basis.

The new address is:
http://dales.rmplc.co.uk/ivan/atari

The first addition is ADIR V1.4 now supports the wildcards '*' and '?' when extracting from disk images and also supports enhanced density Mydos disks including mega disk images!

The old site may go offline without notice.

Ivan

This is a severe case of the blind leading the blind. Please, please
don't post solutions to this group if you are not thoroughly familiar
with the C language.
```

stdio.h is a list of declarations: it tells the compiler the type of identifiers (like printf). And incidentally, printf returns int, not void.

The reason why using printf can pull in a lot of code is that it may be used to convert floating point numbers. Therefore, for a micro without floating point instructions, running without an operating system that emulates floating point instructions, a standard implementation of printf causes a whole floating point calculation library to be incorporated in the executable, whether it is needed or not. There is no way in which the compiler can know whether floating point conversions will be used at run time (I don't want to get complicated here, but to a normal compiler printf is a function like any other function).

The answer is to provide an emasculated printf function that doesn't do floating point conversions.

Regards

I don't know if De Re Atari has been done yet, but I will be
getting a page scannet later this month and could scan it in, clean it
up and have it available in MS Winword format so that someone else
could convert it into PDF and/or HTML. I already have the ICD MI/O
manual in this form, if anybody want's a copy. E-mail me at the address
below.

Oooops...

My apologies for sending that last message twice. The first time I
sent it I received a returned mail error, so I sent it again. Odd.

Funny you should mention that...

The file copy I have of Night Mission Pinball will switch to GR. 15 if you press one of the console keys during play (forget which one). I think you can also adjust the screen colors using the other console keys or the second joystick or something.

It doesn't look very good, since the Night Mission table has a lot of fine detail on it.

In any case, you're right about artifacting being a bug, not a feature. Artifacting is, as most of us now know, caused by (I hope I get this right) the fact that in a composite video signal, luminance is given more bandwidth than chrominance (color). GR. 8's horizontal resolution of 320 pixels is exactly double the number of color changes which can be cleanly transmitted per scan line.
(it's funny to look back at early explanations of artifacting, which went something along the lines of "The resolution of GR.8 exceeds the resolution of the TV, so it's plotting on individual color phospors".)

By "text format du jour", are you referring to HTML? If so, sorry, but
HTML is not a Microsoft creation. And it is definitely going to be
around for a long time.

I've never heard of TeX nor LaTeX. Are they any better than RTF
(Rich Text Format)?

>
> Joebob1@ix.netcom.com

You can't... you have to strip off the first 16 bytes of the .ATR header
and then save it as an .XFD file... If you go to alt.binaries.atari you can
grab DIMS'96... it will convert .ATR (and .DCM) to .XFD files. (side note:
the current version only converts DOS 2.x happy disks, ie: boot disk's will
not load)

2591. Troll - Was: GET A LIFE

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-02 00:00:00 UTC
From: irata@aztec.asu.edu
Message-ID: <52sni5$e0v@news.asu.edu>
Source record: 79954

In case anyone hasn't figured it out yet, this message was a
troll generated to get nasty responses sent to some unsuspecting
netizen. Interestly, I ran across a web page where the owner
was/is having exactly that problem from a similar (same?) troll.
The troll he mentioned was going by the name Santa. I will be
forwarding a copy of the original to this guy. Seems that his
troll was generating the messages from a local "provider" here
in Phoenix called GoodNet. The GoodNet people have not been
able to pinpoint who or where the messages were coming from
within their system but are working on it. Seems that the
Ariz. Dept. of Public Safety (a law enforcement agency) is also
investigating.

Funny how trying to finger our troll gets you no response, yet
any messages sent to this address are not returned.

Do not send any responses to this address. There's more to this
than meets the eye.

I find it difficult to believe that it is impossible to omit
functions that are declared but never used in an application, since I know
that the Power C compiler does precisely this. Of course, this seems as
if it is more a question of the capabilities of the linker, and AFAIK
Power C accomplishes this by (1) compiling libraries to a special library
binary format and (2) building its integrated linker to take advantage of
this format. Perhaps it is omitting functions that are called in code
that will not be reached in execution of the program that is "impossible",
but that just requires a good source level debugger that shows the
portions of the program that are not traversed in execution.
But for reducing the code-size overhead, the basic capability is
the ability to redirect the location of standard headers to library
functions that only include the required subset of capabilities. The
Small-C library functions could provide a good base for this, and the
demands of character and integer handling are much better suited to the
requirements of an 8-bit processor.
Another avenue for reducing the compiler's demands on the system
is to take a page from history and unbundle the steps in the process. It
seems much more likely that a full-fledged ANSI C compiler could be
designed to run in a 20K or 40K TPA if the preprocessor, tokenizer,
compiler, and linker are seperate programs. And if they are oriented to

generating information as intermediate files rather than in memory, the speed of execution would scale up with the 8-bit system: glacially slow with a keyboard & primitive floppy disk set-up; very slow with a more modern floppy drive / keyboard system; tolerable with a Hard drive / keyboard system; and responsive with a DMA RamDisk / keyboard system.

Virtually,

I'm curious, then, how does the Commodore 64 get around artifacting?
It can display 320x200 in like 16 colours.......is it because it gives
more bandwidth to chrominance than luminance?

2595. SyQuest-44 HD Mech for Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-02 00:00:00 UTC
From: b.poehland@genie.com
Message-ID: <19961002025821.aaaa003hf@babyblue.cs.yale.edu>
Source record: 79958

SyQuest 44-meg Removable Media drive mech for sale.

Price: $65.00 (Includes shipping & tech docs)
USA buyers ONLY

This is an embedded SCSI drive mech that works splendidly with the Black Box.
(Any other host adapter, I don't know, but should work. The SCSI imple-
mentation in this drive is *very* robust, they seem to have satisfied the
SCSI protocol requirements extremely well.)
The form factor for this mech is 5.25", half-height.
Minimum power requirements: +5V/1A & +12V/2A, 4-pin IBM-style connector.

Optional items (prices include shipping):

44-meg removable media cartridge w/docs & case: $35.00
(Note: these carts are now second-sourced by Verbatim, $37 each from
Club Mac, Irvine CA 1-800-258-2622)

Custom steel case, beige-grey finish: $12.00

Custom installed in shoebox case w/power supplies & fan: contact me.

External IBM-style switching supply: $25.00

My apologies if the price for this mech seems a bit steep, but these suckers
weigh a ton & I'll take a clobbering on postage. USA buyers ONLY, please.

Message-ID: <19961002034022.aaaa003ul@babyblue.cs.yale.edu>
Source record: 79959

comp.sys.atari.8bit-news@newsbase.yale.cs.edu@inet#

BB vs MIO HD Formats

RE: Jim King's problem of swapping carts between removable media hard drives, one connected to a BB the other to a MIO, I think Mike Jewison is correct. To get complete compatibility bewteen the 2 systems, you'd have to keep the MIO mode switch on the BB in MIO mode all the time. The cart already formatted in BB Mode can't be used on the drive connected to the MIO.

The problem is due to a stupid thing ICD did to the MIO. The MIO writes all its data to the disk media in an INVERTED format; i.e. the 1's are written as 0's & the 0's as 1's. I've never seen schematics for an MIO, possibly the inverted format was due to a buffering of the output data & they elected to do it with an inverting buffer instead of a noninverting one (???).

Maybe I'm being a little too hard on ICD here... very possibly at that time there might not have been any standards for this sort of thing. The MIO is ca. 1985 technology & data format standards may not have been as well defined back then. The Black Box writes data to disk directly (non-inverted format). The Black Box is a newer product than the MIO, & in my opinion a better one. Bob Puff obviously saw the problem, thus the infamous MIO Mode switch. One wonders why Bob didn't just go ahead & make the BB write inverted data also, so that it would be completely compatible with the MIO. The MIO as the senior product had set the standard, but Bob Puff elected not to follow it. There must have been some good reason for that, tho we can only guess. Bob put a lot of effort into refining the BB, he didn't do things without some good reason. Whereas, the people at ICD were among the most neurotic folks I ever met, & their president Tom Harker was the original Space Cadet. (Tom couldn't decide what to call his company, so he came up with ICD = "I Can't Decide"). Very likely ICD just built the MIO as they saw fit & never gave any serious thought to whether the data was inverted or not. As long as the data could be read, they probably figured it didn't matter. They surely didn't worry about about maintaining compatibility with other host adapters.

Hmmm.... there was a minimal interface from Supra, that might have been even earlier than the MIO. I wonder if the Supra interface wrote inverted data also??

Uhhh... I just tried 3 times to upload a message to this group. It got bounced back to me all 3 times.

It was bounced by something called the "SPAMMER-JAMMER".

What the hell is that?

The message was a response to the recent "ATARI POSTREMUS" thread. It was certainly a legitimate topic for discussion here.

My message speculated on how JTS will most likely suck the cash out of Atari & not bother with any attempt to restore the Atari name or products.

Apparently "something" was scanning my message & choked on a line that happened to begin with the word "cash". I'm *very* distressed at the prospect of someone or something capriciously examining mail I submit to a public newsgroup & then deciding which messages are allowed & which are rejected. What *is* this, some kind of secret Internet Police? What have I done wrong? What is my crime?

Apparently the Secret Internet Police have branded me a "Spammer" because I used a sentence that contained the word "cash", & won't let my messages through. What next? Will men in dark suits show up at my door to drag me off to jail in the middle of the night? Beat confessions out of me?

Before I confess to being a spammer, will someone *please* tell me what a spammer is ?????

I don't know where you get this idea, XL-it works fine with .ATR
files, are you using the latest version (0.15)?

e.g. the following works for me :-
atari -nobasic mule.atr

maybe you are talking about another emulator ?

Hey if you could send that to me I'd love to get a copy! I have the
printed version of the MIO docs, and I know how they are formatted, I
can see that it was probobly a fairly simple OCR job, being its all in a
typewritten courier font.

It's a small daughterboard. Unplug your 6502, cut out the central plastic cross piece in the socket, and plug in the daughterboard. That's it. Still operates at 1.79mhz, but you can use the full '816 set of opcodes. Apparently youi can also add RAM, though I never got any docs - mine was serial #003, I believe. I did get their original copy of MAE, though... they backed it up onto their IDE harddrive and gave it to me, back at the Toronto show.

Contact Fine Tooned Engineering for info on the Sweet-16; I'll bet Mike still has some around.

The file is already formatted in Winword and has been also saved as
an ASCII format file. I can e-mail this to anyone that want's it--AS
IS. I'm hoping it can be converted to HTML and/or Adobe PDF.

>>right) the fact that in a composite video signal, luminance is given
>>more bandwidth than chrominance (color). GR. 8's horizontal
>>resolution of 320 pixels is exactly double the number of color
>>changes which can be cleanly transmitted per scan line.
>>(it's funny to look back at early explanations of artifacting, which
>>went something along the lines of "The resolution of GR.8
>>exceeds the resolution of the TV, so it's plotting on individual
>>color phospors".)
>
>I'm curious, then, how does the Commodore 64 get around artifacting?
>It can display 320x200 in like 16 colours.......is it because it gives
>more bandwidth to chrominance than luminance?

I don't have a C-64 in front of me, but I'll bet that it at least has
color bleeding in 320x200 mode. Many C-64 users used the Commodore
composite monitor, which I think was sharp enough to eliminate this problem.

If you hook an Atari ST up to a TV, it has color bleeding in 320x200
mode. A * * * * * pattern shows up as a solid line, like the 8-bit.
The only difference is that on the ST, you don't get a radically
different color.

>: It's a bug, not a feature, Dan. You're talking like an Apple person.
>: To the extent one can try to turn artifacting into something useful,
>: it is unreliable (since it depends heavily on how a TV is adjusted and
>: on the particular 8-bit model since the video amplifiers are different
>: between the 400/800, the 1200XL, the 600/800XL, and the XEs) blurry,
>: and doesn't give you nice colors.

One thing I never under stood about Apple artifacting is they produced
four extra colors. red, blue, green and purple. On the Atari you only
get two, red and blue usually. How does the Apple produce the extra colors?

>Right,two brightnesses and two artefacting colours=four. (different settings)
>How do you figure that.If you take advantage of artefacting you still get
>the same resolution.Try this.

You can't control the color of the artifacted colors though, and they don't
appear on all displays.

You are correct. .atr's work fine with XL-it. I play Lords of
Conquest (lord_a.atr) all the time. It's possible that the original
poster is forgetting the -nobasic option -or- his atr's are corrupted.

They need to be downloaded as binary, not ascii, and a .atr is not
a recognized binary file type for PC browsers. Shift-click on
Netscape, or type "bin" in an FTP client before downloading.

Most likely a local function of your provider (genie.com). You might
try emailing your provider and asking them about it.

>
>What the hell is that?

Definition in the eyes of the programmer . But spam is
genreically used to describe all the MAKE MONEY FAST type posts, and
loads of other commercail advertising, and massive crossposting.
Perhaps you had too much included text from the previous posts?

I see that Branch Always Software has become Emulators, Inc. and that Xformer 96 is soon to be released. It's good to see progress is still being made in spite of all the grumbling that's gone on about personality issues. Let's hope that good solid competitive programming lives on.

2612. Re: GNU C-compiler port to 6502

Konrad Kokoszkiewicz (draco@mi.com.pl) wrote:

: Isn't it much easier to port the gcc to the 65c816 (with it's 16 MB
: address
: space, 64k stack, 16-bit registers etc.), before anybody can port it to
: the
: 6502? 6502 has a C compiler yet: it is the CC65. Additionally, there
: exist
: several good programming languages for the 6502, such as the Action!,
: Forth,
: or at least the Turbo BASIC XL. At the other hand, most people I know,
: write
: 6502 applications just in the assembly language. But there is no good
: programming
: language, that produces the 65c816 code (except for the assemblers like
: the MAE).
: So it would be nice to have the gcc for this chip.

Actually, I ported lcc which is a simpler C compiler to thee 65816 about
two years ago. I believe the source is still on ftp.winternet.com in
pub/users/tm/lcc*.zip

It generates correct, but not great, code - I'm not sure whether
you can generate great code for the 65816 with a compiler.

What's funny is the Apple positioned the //gs as a "machine made to be
programmed in C" yet the toolbox uses a Pascal calling convention
plus it uses the 65816, which is a horrible CPU for a C compiler.

Go figure.

No. I am thinking about a 65c816 upgrade for Atari, called Sweet 16,
developed by the Fine Tooned Engineering (FTe). I've got this upgrade and
it definitely is not an interpreter. It is just the CPU with some additional
stuff.

Anyways, I would like to know more about the Turbo 16: who developed it,
where is it available, how much does it cost etc.

Ben, I don't know why this is happening, but every message you posted recently -- the one about the Syquest, the one about the floppy mechs and the one about the Spammer Jammer are coming through in duplicate.

Spamming refers to multiple posts among other things.

^^

???? Good solid programming ???? Surely you are NOT talking about
Xformer! As emulators go, Xformer is sadly lacking ... its performance
is pitiful, and its author "socially impared", IMHO.

Bill

The point here was what the linker can do with object files containing
unused functions. The linker is nor able to find such functions, even
if it would try to analyze the object code. Not all references to a
used functions appear in a symbol table, e.g. intra-object calls, and
indirect jumps through a pointer make that even more difficult.

> With respect to determining whether floating point routines should

It is subject to discussion if the compiler should know about printf
and other library functions. printf is part of the library and not
the language and some think the compiler should know about the
language only.

Source record: 79983

Hi, I kept my HAPPY 810 when I upgraded to an 800XL from a 400 system.
I'd like to have the 1050 drive just to match the XL. Anyone
interested in trading? I'll include a caseless standard 810 drive too.

The Happy drive uses a MPI mech. The caseless drive is Tandon mech.

Tnx, Glen.

No Ben, we don't have to guess! ;-)

When Bob Puff came to the Hamilton, Burlington, Oakville Atari Users Group
about two years ago, I asked him many questions about the development of the
Black Box.

Back when SUPRA brought out their hard disk interface, Bob studied how it
worked.....and based the design of the Black box on what he had learned. So,
in fact, the Black box IS based on the senior product which had set the
standard. Later, he added the MIO compatiblity switch.

: Hmmm.... there was a minimal interface from Supra, that might have been
: even earlier than the MIO. I wonder if the Supra interface wrote inverted
: data also??

Nope, it is compatible with the BB, from what Bob told me! :-)

>
> Freddy.
> offen300@hio.tem.nhl.nl

You believe, I know. It was not an opinion, it is a result of a test.
Hardware:
- Atari 65XE, 1.77 MHz (PAL version), XL OS.
- IDE Interface
- IDE hard drive: 2,5" Western Digital WDC AB 130 (30 MB, 31k internal
cache)
Software:
- RATEHD.COM (http://www.orient.uw.edu.pl/~conradus/atari.html)

The same test with the Seagate ST-157A (3,5" 40MB) rates at about
42k/sec. So, it is incredible, but it is a question of a drive.

About the maximum speed: basically, you transfer data from a port
to a memory with just two instructions:

```
LDA port
STA (pointer),Y
```

The first takes 4 cycles, the second - 5 cycles. It is 9 cycles per
byte as a minimum. Ataris execute about 1.770.000 (or 1.790.000)
cycles per second, so the maximum transfer rate is for the 6502 is
about 190k per second. Regarding all necessary calculations,
loop instructions (like INY, BNE etc), DOS and OS code, ANTIC DMA,
cyclic VBL interrupt, this rate may finally decrease dramatically.
The problem is, how to optimize all this necessary stuff and make

it as short and fast as possible. Of course, you'll never achieve the 190k per second reading a file with the DOS. It is an absolute and in fact theoretical maximum the 6502 can do. But a highly optimized code may give you perhaps not 72k (it is the maximum transfer rate for the drive specified above, when working with an Atari), but certainly at least 50k per second. Our IDE drive can normally read 256-byte sectors (i.e. working in the emulation mode, that is naturally slower) via the OS SIOINT calls with 49 k per second speed rate (and 63k, if the ANTIC's DMA is off). The test program (namely the SysInfo 2.0) will be available on the net soon.

> that the Power C compiler does precisely this.

You seem to still not understand the difference between a declaration
and the use of a function. A declaration like

int printf(const char *fmt, ...);

only tells the compiler what arguments printf expects *in case* it is
called. The declaration doesn't make any difference in what functions
from library are linked to the executable.

> Of course, this seems as if it is more a question of the
> capabilities of the linker, and AFAIK Power C accomplishes this by
> (1) compiling libraries to a special library binary format and (2)
> building its integrated linker to take advantage of this format.

That has almost nothing to do with the format of object files.

> Perhaps it is omitting functions that are called in code
> that will not be reached in execution of the program that is "impossible",
> but that just requires a good source level debugger that shows the
> portions of the program that are not traversed in execution.

That is generally impossible, like many other decision problems. In
general, it is not possible to decide if

* a program will ever terminate given a certain input

* a certain line of code will be traversed when running the program
(needed to decide if a function is unused or not).

* two functions compute the same results when given the same arguments

* other similar problems.

Note that I wrote in general. It is possible to find non-reachable
code in many special cases, things like `if' and `while' statements
with condition that always must compute to false. These are common
compiler techniques and gcc also does this.

But if you have something like

```
int printf(const char *fmt, ...)
{
...

if <fmt contains %f, %g, etc> {
call the apropriate floating point
conversion routines
}
}
```

the linker can't know if printf is ever called with %f, %g or the
like. So it has to link in the floating point conversion routines
from the library even if your program only outputs integers by printf.

> But for reducing the code-size overhead, the basic capability is

> Small-C library functions could provide a good base for this, and the
> demands of character and integer handling are much better suited to the
> requirements of an 8-bit processor.

As pointed out above and other postings in this thread, that whole
story is not a story of header files but a story a linker is concerned
with. Relocating declarations between headers doesn't buy anything.

2627. Cases For SyQuest-44

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-02 00:00:00 UTC
From: b@genie.geis.com
Message-ID: <19961002190837.aaaa000Nf@babyblue.cs.yale.edu>
Source record: 79990

Subject: Cases For SyQuest-44

I noticed Jim King looking for a 1050 case to mount a SyQuest-44 mech in. I once did that for someone. It works, but the arrangement is marginal at best. The fellow I did it for lives on the East Coast USA, where the temperatures are cool to moderate most of the year. Before shipping the completed unit I spent considerable time running it & testing it. The problem was HEAT. The SyQuest mech draws a *lot* of power, & I'm here to tell you that after an hour those suckers are so hot you can't touch them. The 1050 case is well-ventilated, but the SyQuest-44 gets so hot that a 1050 case provides barely adequate ventilation under moderate ambient temperatures.

I used several SyQuest systems here in Pennsylvania when I ran AC. Initially I mounted them in enclosed steel cases. It's a wonder they didn't flame out on me the first couple hours. Man, did those things get hot! I got one of those little 1.25" boxer fans from Radio Shack & installed it in the rear of the case. The wee little fan only pulled the faintest breeze through the SyQuest mech, but it made all the difference in the world. Thereafter they only got faintly warm. I ran SyQuest-44's for 3 years with the CSS Black Box. Never a problem. Never a failure. Very solid system. I still keep a few 44's around in some junker PC's. Best implementation of embedded SCSI I ever saw. The SyQuest people didn't cut any corners on that drive. But you *do* need to keep it cool. I beat the dickens out of mine when I was publishing AC, it took a licking & kept on ticking. The only time I ever had a problem, it turned out to be a defective SCSI cable.

For someone who lives out in the middle of the desert I don't think a 1050 case will provide enough air. You are asking for trouble if you do. I never found out how hot a 44 has to get before it blows up-- thank goodness! For virtually all installations of this mech a wraparound steel case with a fan is the only way to go. Suck the air in thru the back & blow it out the grill in the front of the mech. Place a bit of Scotchbrite or porous foam in front of the fan to filter the incoming air. Wash the filter once a year. Do that, & a SyQuest mech will probably run forever.

I bought my first 2 SyQuest mechs at the hideous price of $350 each. Just before they were discontinued I bought 2 more for $130 each. Now, of course, they are obsolete in the IBM world. However they are *perfect* for use with an Atari 8-bit & Black Box.

The 44-meg cartridges are getting harder to find, but mailorder places still offer them. Initially I got cartridges for $60 apiece when purchased in lots of 10 (I got together with 2 other guys at work & the 3 of us together forked up the $600 for the order then divided the carts when they arrived.) Recently I saw Verbatim was second-sourcing the 44-meg carts for $37 (cheaper if you

buy larger quantities).

The cartridge cases are only about 1/2" thick, about as much bookshelf space as a Reader's Digest. With 6 of these cartridges you could probably store all the disk-based software ever written for the Atari 8-bits in less than 5 inches of shelf space. Not bad....

2628. RE: ATARI POSTREMUS

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-02 00:00:00 UTC
From: b@genie.geis.com
Message-ID: <19961002190838.aaaa000Nb@babyblue.cs.yale.edu>
Source record: 79991

RE: ATARI POSTREMUS

After reading the numerous responses to my posting about the de-listing of Atari stock from the AMEX exchange in August, I just thought I'd follow up with a few additional observations & comments.

A few people expressed hope that JTS might either re-release some of the old 8-bit products or perhaps sell off the rights to some entrepreneurial enterprise. After 13 years of involvement with things Atari, I've made the correlation that the gloomiest outlook always turns out to be closest to reality in the Atari world. I gleaned my info about the JTS buyout & Atari stock de-listing from the Wall Street Journal, which is about as close as you can get to the "horse's mouth" on business matters. Sure, last Feb. the JTS people made noises about continuing the Atari name & products, but that was for show. JTS is a startup disk drive company, they don't give a hoot for either the Atari name or Atari's obsolete products. They were hungry for capital, & Atari was cash-rich. Officially it was a merger, but that was also just for show. In fact Atari at the time was sitting on $25M in cash, with another $40M realizable from the sale of assets. JTS merely sucked the cash out of Atari, with the 8-bit entrails left rotting by the roadside.

Even if JTS did sell off the Atari rights, the precedents are unpromising. Fine-Tooned bought up ICD & Newell, & where did THAT go? (Indeed, has anyone seen Mikey lately?) Atari Classics magazine & Fine-Tooned Engineering are this community's most notable entrepreneurial efforts within the past few years, & today neither of them may be described as thriving businesses.

JTS isn't doing so hot. It closed yesterday at $4.62. Their most notable achievement to date was to win a contract for supplying drives to Packard-Bell. You'd think that would have driven JTS way up. Nope. Why not? Because saavy investors know that Packard-Bell has the worst record in the industry for paying its bills (not to mention the poorest record for customer service & hardware reliability, plus their use of recycled components in systems sold as new). In fact, the people who run Packard-Bell operate exactly the way Tramiel used to run Atari. They build the cheapest piece of junk possible, screw all their dealers & customers, & wait for threat of lawsuit before paying their bills. Several of the more reputable disk drive companies had ceased doing business with Packard because of the hassles, which created a vacuum for JTS to move in as a supplier. Investors were not impressed, but Tramiel & Sons no doubt feel right at home doing business with an oufit that apparently lives by the Tramiel Credo ("Business Is War", etc.).

Exactly what the Tramiels got from the deal has not been publicly disclosed. Knowing the character of the Tramiels, however, I think we may safely assume none of them are starving. Cash compensation aside, it is for certain they made a killing on the stock alone. In summer 1995 Warner bailed out of

Atari completely, dumping 15 million shares onto the open market. Atari stock plummeted to $1, so the Tramiels snatched up enough of it to gain control of the company. (The relative stability of Atari thru 1995 may be attributed to Warner, which held a major- & probably controlling- interest in the company.) With Warner out of the way it didn't take long for Tramiel to complete the final sacking. By the time of the JTS deal Atari had risen to around 2. But immediately after the JTS announcement Atari took off, closing over 5 within a few days & staying there until it was de-listed. So, if the Tramiels owned controlling interest (conservative estimate: 20 million shares) & they made an overall profit of $2.50 per share... well my wallet isn't large enough to hold $50M, but I betcha that sum nestled nicely into Jack Tramiel's wallet.

Of course, anyone who owned Atari stock in February, or who was bold enough to buy it right after the JTS announcement, would have made a killing. Warner got burned the worst, I estimate their losses around $100M when they bailed out last year. The dramatic recovery of the stock in the wake of the JTS announcement translated Warner's losses into a huge gain for Tramiel, JTS, & any investors with enough intestinal fortitude to buy the stock after Warner dumped it.

In retrospect I view the demise of Atari as the denouement of a power struggle between the Tramiels & Warner. JTS was merely the instrument by which Tramiel accomplished his purpose. And all the rest of Atari- its employees, vendors, customers, & users- were just pawns in the game, mere cannon fodder for the great Battle Among The Gods. Tramiel won the battle. Warner lost. Atari lost. And we, the users, also lost.

I'm sure there are lots of unholy conclusions to be drawn from these contemptible antics of Korporat Amerika, but I reckon I won't go into that. Someone might accuse me of having an "attitude". Heh....

- Ben Poehland

PS- You Latin scholars, Nota Bene. "Postremus" is usually taken to mean "the final end" or "ultimate conclusion", etc. But in another context it can also mean "the very lowest" or "the very worst". One cannot help but admire the ancient Romans: 2500 years ago they enjoyed an efficiency of expression unavailable to us today.

2629. 256K DRAMs For Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-02 00:00:00 UTC
From: b@genie.geis.com
Message-ID: <19961002190811.aaaa000NU@babyblue.cs.yale.edu>
Source record: 79992

256K DRAM Chips Available!

I just finished culling my collection of memory chips and now have a large surplus of 256K DRAM chips to sell.

These chips are all 150 or 120 nanosecond speed. (Not so good for your 133MHz Pentium, but just
dandy for Atari RAM up-
grades.)

Total chips on hand is 197 pieces. (About 2 pounds worth!)

Price: 50 cents per chip, minumum order 10 chips please.

I will pay all shipping! :)

USA buyers ONLY, please!

I will test each chip individually on a DRAM tester prior to shipment, to ensure the chips you get are good. Also, I will *try* (but cannot guarantee) to ensure that all chips sent in any one order are all the same brand.

I also have a 2nd batch of 25 chips to sell, separate from the ones described above. These are also 256K DRAMs, 120ns. However they are salvaged units with short legs. They work OK, but they won't fit into sockets (they would have to be soldered). I'll sell this entire lot of 25 chips for $5.00, postage is on me. :) USA buyers ONLY, sorry.

If someone is interested in buying out my entire inventory at an attractive price, please contact me personally by e-mail if you wish to place a bid. I will sell the entire lot to the first person who makes a reasonable offer. I got no more space in my little drawers to store chips & need to clear these out to make space in the little drawers for new chips that presently have no place to live. :-(

2630. BB vs MIO HD Formats

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-02 00:00:00 UTC
From: b@genie.geis.com
Message-ID: <19961002190955.aaaa000Nx@babyblue.cs.yale.edu>
Source record: 79993

RE: Jim King's problem of swapping carts between removable media hard drives, one connected to a BB the other to a MIO, I think Mike Jewison is correct. To get complete compatibility bewteen the 2 systems, you'd have to keep the MIO mode switch on the BB in MIO mode all the time. The cart already formatted in BB Mode can't be used on the drive connected to the MIO.

The problem is due to a stupid thing ICD did to the MIO. The MIO writes all its data to the disk media in an INVERTED format; i.e. the 1's are written as 0's & the 0's as 1's. I've never seen schematics for an MIO, possibly the inverted format was due to a buffering of the output data & they elected to do it with an inverting buffer instead of a noninverting one (???).

Maybe I'm being a little too hard on ICD here... very possibly at that time there might not have been any standards for this sort of thing. The MIO is ca. 1985 technology & data format standards may not have been as well defined back then. The Black Box writes data to disk directly (non-inverted format). The Black Box is a newer product than the MIO, & in my opinion a better one. Bob Puff obviously saw the problem, thus the infamous MIO Mode switch. One wonders why Bob didn't just go ahead & make the BB write inverted data also, so that it would be completely compatible with the MIO. The MIO as the senior product had set the standard, but Bob Puff elected not to follow it. There must have been some good reason for that, tho we can only guess. Bob put a lot of effort into refining the BB, he didn't do things without some good reason. Whereas, the people at ICD were among the most neurotic folks I ever met, & their president Tom Harker was the original Space Cadet. (Tom couldn't decide what to call his company, so he came up with ICD = "I Can't Decide"). Very likely ICD just built the MIO as they saw fit & never gave any serious thought to whether the data was inverted or not. As long as the data could be read, they probably figured it didn't matter. They surely didn't worry about about maintaining compatibility with other host adapters.

Hmmm.... there was a minimal interface from Supra, that might have been even earlier than the MIO. I wonder if the Supra interface wrote inverted data also??

>Thanks!

MULE is the Binary game in which you have to do a Cold Boot.

Although to answer your question. The "READY" prompt is there only when
you are in BASIC and you cannot run object or com files from a Basic READY
prompt. If you are using SpartaDOS 3.2 you can type DOS at the READY
prompt and hit Return. Then type at the D1: prompt BASIC OFF hit return.
This turns the basic off.

Then you can type MULE.COM or MULE.EXE and return to run them.

The D1: prompt is equal to A: in MS-DOS, there is D1 thru D8 for the 8
disk drives you can have.

To load a BASIC Program you must type in LOAD "Dx:filename.ext" x=Drive 1
thru 8

Error 130 is "Non-Existant Device" which is because there isn't a device "M"

I used to program alot on this little Jewel in Basic and Assembler.

Ben,

I don't disagree with your opinions, but some of your facts aren't accurate. Time-Warner never had anywhere near a controlling interest in Atari. What the Tramiels got in the Atari/JTS deal was JTS stock. They, along with Jugi Tandon are the primary stockholders in JTS. Atari wasn't "de-listed", the JTS ticker replaced ATC when the merger was completed. Yes, JTS needed cash to get their removable media drives in production. Atari had cash and didn't see a profit-making future in either computers or video games. I don't expect JTS to do anything with Atari products except sell off the Jaguar inventory. One of Time-Warner's interests in Atari was using the Jag chipset for interactive TV. The Jag tehcnology could still be saleable for that purpose (VisCorp and Emerson Electric have some kind of deal going to use the Amiga chipset for similar purposes), but I don't expect JTS or the Tramiels to be aggressive enough to make that happen.

JTS stock has not moved a lot, staying in the same 4-1/2 to 5 range that was "home" for ATC recently. Although ATC did go up as high as 9 back in June. Shoulda sold, but I was out of town on vacation! :)

: Daniel Klugh (dklugh@freenet.columbus.oh.us) wrote:
: : Konrad Kokoszkiewicz (draco@mi.com.pl) wrote:

: : : AFAIK, the Apple IIgs uses the 65c816 chip, the same as in upgraded
: : : Ataris
: : : (with the Sweet 16 or something similar). By the way: the 6502 code is
: : You're think of the Sweet-16 interpreter for the Apple.
: : The Atari 86816 upgrade is called Turbo-16
: huh?!?
: I meant the 65816 upgrade,not 86816.
I kinda get a tad anoyed when someone responds to somthing they don't
recognise...
I have never heard of the 86816 and would have thought someone
refering to one was talking about the popular 65816...

Basicly Atari and Apple use the same CPU... the 6502...
Someone made a 65c816... it's just a 16 bit 6502...
The Apple used it (or somthing like it) to make the Apple //gs and many
apple users Installed it to speed up there computers and get more memory...

It should be (thereticly) simple to do the same to an Atari...
If it hasn't been done.. what you may consider is pulling out
the CPU board (I'm thinking of an old Atari 400 I tried to fix once)
and make a new CPU board using the 65c816... You may be able to
use the 16 meg ram memory base to add more memory to the CPU or
add more power... (Someone was refuring to adding an ISA buss to an Atari
you could add the support chips in this reagen of memory.. and support roms
etc could reside here... But there would be compatablity issues)

The C64 also had such an upgrade card (65c816 on a cartrage)

I how ever found that buying a W65c802 was the easyer way around
This is a direct chip replacement... just pull the 6502 out
and put the W65c802 in... this is also a 16 bit cpu but it has an
8 bit buss and it will give absolutly no improvement unless you
write software for it...

Contact the Wesrern Design Center Inc and see if the chip is still
in stock...
I have some very old spec sheets... some mention was made to a 32 bit
moddle in the future so if your planing to add the 65c816 the hard
way you might consider getting the W65C832
The sheet is old (and damaged) The phone number may be invalid
(the address is unreadable)

602-962-4545

There probably was a product on the market for a 65C816 for the Atari
line... But as I rember not to much after the 65C816 came out
EA started trying to kill Atari (By activly hunting down and buying
out companys that made Atari software and converting them to other platforms
and putting an end to the Atari versions... claming 8 bits had no future
but in so doing terminated software for the ST line... And continued
to sell software for the 8 bit Commodore 64.. so such a product
may have had a short life span)

Side note... In case anyone dosn't beleave EA was doing this on purpouse
I know someone who was in EA at the time and he seemed to think it
was a great thing for EA to be make shure Atari gose under....
I think EA had a vendeta agenst Jack Tramell...
They wern't intrested in Commodore tell he left and not conserned about
Atari tell he owned it...

Well anyway... enough about corprate polotics...

You may even search the web for Western Design Center...

Get permission from the publisher, or you may find a lawsuit on your hands. The publisher might give you Web rights without a problem, but they DO own the copyright. Even though the book is out of print, it's still illegal to republish it online without permission.

<snip>
Not exactly, there were at least two versions of the 800 CPU board.
The earliest ones used a standard 6502B & you could plug in a 65802
or 65C02 <same chip as the Apple IIC>. The later versions had the
6502C so only XL type cpus will work. I have a 65C02 in mine, tried
to get a 65802 from WDC & they said "no longer made." All my other
sources for chips couldn't find an 65802 either. I never checked the
400 schematics, but it's possible they all have a 6502B.
What I've noticed with the 65C02 is it allows you to write much

shorter code, maybe 30% tighter, relative speed does not readily
drop by 30% though because of addressing modes for things like
block moves.

: I'd be willing to put in some time marking up ASCII for TeX or LaTeX,
: which will both (by design) be around longer than the Micro$loth
: text format du jour. And if there are any real TeXperts out there who'd
: like to bicker about how to go about it, feel free to email me.

While I'm not really a TeXnician of any skill (I just finished the
TeXbook), I would recommend going with TeX over LaTeX. TeX is designed
for books; it sees itself as a typesetter where you're allowed to specify
exactly what you want something to look like. LaTeX thinks of itself
as a document formatter, where you specify the design and LaTeX does most
of the actualy formatting. MTA being a book (and a good one, at that),
TeX is the more appropriate system, IMHO.

To those who don't have a clue as to what we're talking about: TeX is a
typesetting system designed by Donald E. Knuth, a former professor at
Stanford (He quit to concentrate full time on his series of books, _The
Art of Computer Programming_, for which TeX was actually originally
designed for). It is intended for use in formatting books. LaTeX is a
system developed on top of TeX intended to make formatting easier by
providing many commonly used macros.

BTW, the correct pronunciation of TeX, to quote DEK in the TeXbook:

``Insiders pronunce the X of TeX as a Greek chi, not as an `x', so that
TeX rhymes with the word blecchhh. It's the ch sound in Scottish words
like loch or German words like ach; it's a Spanish `j' and a Russian
`kh'. When you say it correctly to your computer, the terminal may
become slightly moist.''

Soemethings up with your email address, Ben.. The header reads
b@genie.geis.com, when in fact, your mail address is b.poehland.

Tried replying several times, but just got bounces from GEnie.

```
Hello, welcome to Kai's big Big BIG sale!

This is in many parts, for many systems.

In the following order, the carts for these systems appear.

Intellivision,
Atari 5200,
Atari 800,
TI-994A,
Colecovision,
Color Computer,
& Vic-20,

Now, first off: The Intellivision Sale!

This sale lists in this order:
Shrink wrapped Carts,
Complete in box Carts,
Box, Dox, 1 overlay Carts
Box, Dox Carts,
Box, overlays Carts,
Box, overlay Carts,
Box, Carts,
Dox, Overlays, Carts
Dox, Carts
Overlays, Carts,
Overlay, Carts,
Loose Carts
//=========================================================================\\

All carts have been tested!

First come, first serve. Many MANY of these are singles, so once they are sold, they are sold.

In cases of extreme quantity, some discounts may be negotiable.

If you need quantities of certain carts, let me know, I may have more than one.

Thanks a lot for taking the time to look!

Heh, just as I was about to subscribe to the old atari classics it went
under... and I had just found out about it too.. :) So I would love to
be a part of the next incarnation! :)

Try asking in comp.sys.atari.st. It's probably your TOS disk? Pretty
early ST if that's the case. STs after 1985 didn't need a boot disk.

Didn't the Atari floppy drives invert the data? Maybe the MIO was
designed that way in the belief that, if Atari made an 8-bit hard drive
system, it would also use inverted data.

With current implementations, you're right. My comments were triggered
because you implied that nothing could be done. I think we can agree
that it is possible to design a system such that it can find almost
all unused functions.

>> With respect to determining whether floating point routines should

Once again: You will agree with me that it is possible to do.

Greets,

Asger Alstrup

The Atari Revolution was started by Don Thomas. Atari hired him,
so he didn't need to lead a revolution anymore! :) Don handled Portfolio
marketing at Atari among other things. He recently left when Atari merged
with JTS.

They may have been following the (sort of) Atari standard set for the
Atari floppy drives, which unlike everyone else in the industry were
designed to write inverted data to the floppy.

Maybe ICD decided to follow this standard as the only one they may
have known.

I've been fiddling with SmartOS; but rather than the Cart and $D600 I've
been working on a simplified circuit that offers Two RAM OSes; it's nice
to have the OS ROM, a "good" modified copy, and an "experimental" copy.
Down side? My Eprom burner is getting lonely...

It was released by DataQue, but they no longer sell it. It included a
re-written OS EPROM, and they sold RAM expansions. They still list a
65816 aware spreadsheet, TurboCalc, in their product list; no idea how
it would wourk with the Sweet-16.

Why ALL those NON Atari related stuff in a ATARI 8bit news group....

Split your message in smaller lists for every system and post only the right
message in the good newsgroup..... !!!!

There are people that have to pay for every KB that they get from the NET and
also for there online time to get info.......
So don't thing only about your self, also thing about those orther users....

I've always had the feeling, more so after having spent a lot of time playing with the guts of the 1450 and reading the 1090 spec, that ICD based everything they did on a 1090 proto that type Tom had at the time. When you dump the MIO rom you can see where they (ICD) made the effort at one time to stay away from the from the two devices channels used by the 1450. Its only the R: device that conflicts with the the two devices found on the 1450...so, I almost wonder if the inverted data isn't something that came out of Atari just prior to them droping the 1450/1090 projects.

: Not exactly, there were at least two versions of the 800 CPU board.
: The earliest ones used a standard 6502B & you could plug in a 65802
: *or* 65C02 <same chip as the Apple IIC>. The later versions had the
: 6502C so only XL type cpus will work. I have a 65C02 in mine, tried
: to get a 65802 from WDC & they said "no longer made." All my other
: sources for chips couldn't find an 65802 either. I never checked the
: 400 schematics, but it's possible they all have a 6502B.

: What I've noticed with the 65C02 is it allows you to write much
: shorter code, maybe 30% tighter, relative speed does not readily
: drop by 30% though because of addressing modes for things like
: block moves.

Uhh, 65C02 code is NOT 30% tighter.

It's more like 5%. The only new instructions I can remember are:

STZ
BRA

The Rockwell 65C02 has a few other ones like BBR and BBS, but those
aren't in the Western Design Center 65C02.

I did 6502/65C02/65816 coding for about six years commercially, so I feel
my 5% figure is much closer to being realistic than 30%.

I'm sorry if I did not express the situation well. I had thought
someone was claiming that it was impossible to link a C executable
that omits a function in an object file when that function in the
executable is not used, but other functions in the object file are used.
This is clearly possible, since the Power C compiler does it. Obviously,
the functions are all declared in the library header, which is included
in the source, but those functions that are not used are not linked into
the executable: however, that is not central to the claim that had been
made, so it was a confusing way to express the point.

You guys are right on... I've always been amazed at MULE for it's
impecciable balance. BallBlazer and Bruce Lee had some of the best two
player action. Very intense at times. Which leads me to another game:
Archon. I've had many intense head-to-head games with an old friend.
Still load it up now and again to try and beat the computer with a
single Unicorn. Although, I've probably spent most of my time playing
Alternate Reality. There's something 'bout AR that's so addicting. I
think it's because it is so unpredictable at times. The game is much
deeper than most games I've played.

Just my 2 cents,

Thanks for telling me these facts! That's just what I wanted to know.

I thought 30k/sec was the maximum because it was the transfer rate
of my Black Box with HD and because I heard it from someone who
makes disk drive enhancements (speedy).

I became interested in this because I was thinking about doing
harddisk recording (using two linked Atari's, a black box and HD).
In theory this should be possible, but I don't think it's very
useful. There are computers which are much better at doing harddisk
recording (e.g. Atari Falcon). Though I liked the idea :)

Hi Robert,

There are presently two or three Atari user groups within an hour or so of Trenton. There is the Jersey Atari User Group which is still active with about 20 member or so. There was also a support group in Philadelphia about a year ago. I am not too sure about them. They were down to about 5 or 6 active members at that point.

There was an active group of about 6 or 7 dedicated 8-bitters in Delaware. The leader moved some time ago and I have lost contact with them.

The Lehigh Valley Atari Users Group is still active in the Allentown, PA area. If you wish more info, please feel free to contact me via E-Mail.

Take care, Jon

> all unused functions.

Ok. We are talking about two different things here. One is leaving
out unused functions by just looking at references to functions in the
used code. That makes it possible to link in units of externally
defined objects (function and variables) instead of in units of object
files. This requires a special object files format so that it
contains modules which can be linked independently. Each function
andeach variable would be a module. This can be done easily but
doesn't buy you very much. If you look at a standard C library
implementation you'll find that almost every function is in an object
file by itself. Only functions which are very likely to be used
together and which are really small are in one object file together.
So, with that approach, you wouldn't typically save very much.

> >> With respect to determining whether floating point routines should

>
> Once again: You will agree with me that it is possible to do.

This is the other thing, which is much harder to do but not impossible
for some special cases. This is leaving out unused functions although
there are refereced in code already linked in from a library but which
is never executed because of arguments given to that libray function
from somewhere in your program.

Yes. It can be done. But the attempt to implement such a compiler may well kludge up the compiler. Even if the compiler is implemented in a way that it knows the meaning of the printf format string and it can recognize that floating point code isn't needed for a special printf call, it would have to communicate this inforamtion somehow to the linker. You can of course, change even the object file format and the linker to know about special cases of the printf function. However, the result would be a complete shit of code, IHMO, even if it would work and do what you want. A compiler and a even a linker which have much knowledge about library functions which should be better developed completely independent.

You can try to find a more general soltution to this problem, but that isn't very easy probably. And I think all that effort wouldn't buy you much. If you look at a standard C library implementation you'll find that almost every function is in an object file by itself. Only functions which are very likely to be used together and which are really small are in one object file together. So, with your approach, you wouldn't save very much.

Actually, I don't think it is much harder. I have seen an efficient
implementation and it was not kludged up.

Notice that you don't have to parse the string: You can look at the
parameters. Are any of those floats? If not, skip the float part of
the library. This is completely general.

>You can try to find a more general soltution to this problem, but that

In the light of dynamically linked libraries, we don't get anything.
It's just for statically linked binaries, we have a benefit. This is
actually substantial for more complex programs, where you use other
libraries such as graphical toolkits, gnu's readline and what have
you.

But this is not the place for this discussion.
If you want to, we can continue in e-mail.

Jon,
You missed two others JACS, the Jersey Atari Computer Society and
PACS, the Philadelphia Area Computer Society. My idea was an 8-bit only
group where *I* didn't have to travel the 45 minutes to the meeting
anymore. I want to do only 8-bit related stuff.
There are two others interested at the moment. I like to see at
least 5, not counting myself, to really get things going. I suppose 3
would do though.

Dave,

since I am currently developing an OS for the Sweet 16 and because I am
developer of the SysInfo (that should "know" as much various systems
as possible), I would like to know more about this system. Do you
have it? Could you send me any detailed information?

If you wish to be a corresponding member of a user group, consider the Ol' Hackers Atari User Group, an exclusively 8-bit group on Long Island. I'm its newsletter editor now. We publish bimonthly on a double-sided floppy. We have well in excess of 600 disks in our PD library and we own the PoolDisk.

There are other groups that are exclusively 8-bit and accept corresponding members. There's the AAAUA in San Antonio, the NWPAC in Phoenix and PACE in Largo, FL. Perhaps there are even more. All the ones I mentioned are active, correspond with each other, and publish newsletters -- either on disk or in print.

BTW, the Lehigh Valley Group, Ol' Hackers, the JACG and the Long Island AUG are members of an organization called NEAR*US, which gives them added support.

>

Ever wonder why System 7 runs slow on a Plus or SE (but fine on an SE/30)? The reason, contrary to popular belief, is due to the CPU itself. Besides the differences in clock speed, the Plus and SE use a 68000 which, as we all know, has a 16-bit external data bus.

Systems before System 7 were compiled to use 16 bit moves whenever possible (move.w [memory],d0), and operations were generally based on 16 bit data. However, when System 7 came out they made it a true 32-bit OS so that the newer Macs would benefit from the capabilities of their CPUs (the II, IIx, IIcx, IIci, IIsi, LC, etc. all used chips that were >=68020, these are all have 32-bit external data buses). That means that move.w instructions were changed to move.l instructions so that the current Macs could move twice as much data in the same time as it would take them to move 16bits.

Now, the old Macs (those that used a 68000) were perfectly capable of doing a move.l, but it takes them twice as long to do this as it does a move.w. Hence, you see a pretty substantial slow-down on 68K Macs, but those that use a 68020 or better will enjoy a performance increase.

Also consider that a Mac Plus will actually run System 7.5.5. Try running Windows 95 on an XT or AT -- I think not.

I usually don't give this type of thing much thought, but I think you've
set a new misspelling record here:
dosn't = doesn't
beleave = believe
purpouse = purpose
shure = sure
gose = goes
vendeta = vendetta
agenst = against
Tramell = Tramiel
wern't = weren't
tell = until (or 'til)
conserned = concerned

or 18% of the above are misspelled. It may be worth some attention.

Wow, now there's an long running user group. Actually, I'm still
sort of a member of JACS. I'd prefer some face-to-face user discussions
locally.
Thanx for the comment though.

I am looking for the pinout of an atari 2600 paddle. I have the pinout for a computer game port and I just want the pinout for the paddle to hook up to my CPU P166.

I bought the activision game pack, and the greatest game of alltime is KABOOM!

A paddle would greatly increase my score on the game.

thanks

Depending on who actually published the book, he may not own the copyright.
My color screen dump for the 8-bit was published by Compuke (sic) in their
last issue containing type-in programs - I think that was April '88 - and a
couple years later when I inquired about getting permission to publish
elsewhere (for free), I was informed that I could buy back the copyright for
the $250 I got paid for the original article; otherwise, they denied
permission.

Haven't you people got it yet? JTS make disk drives for PCs. They needed
cash. Atari had some so they called it a day and stopped doing everything
they have done so far, took the remaining cash and invested it in JTS
where they have a hope of a return.

There will be no more stuff from Atari. The firm doesn't exist. They
won't do a new Jag, new Jag games or anything.

Yikes. Favorite game. I've replied to a thread like this before, long ago. :) Hmm!

Of all the games I have, that I can REMEMBER, some of my top favorites are:

Star Raiders OF COURSE!
Mega Blast II Chaotic explosive fun. Girls love it! (!?!?!)
Boulder Dash Until it gets too difficult. ;)
Wavy Navy NEARLY Galaga!
Space War My girlfriend and I dig this one. :)
Alternate Reality But I never have time to get INTO it. :(
Atartris II One of the coolest Tetris ports!
Joust Better (game play) than the arcade or PSX. :)

Now, all we need for the 8-bit are Tekken II, Galaga and Twisted Metal. ;)
(And maybe a good multicomputer Doom-style game. ;))

True, but an author typically gives up some of his rights when he signs on with a publisher. I've had a magazine article published, and the contract specified a number of things, one of which was the debarring of republishing of the article within a certain time period. Seeing as this is a book, I wouldn't be surprised if Ian can't republish it at all, even though he is the author.

I feel that putting Mapping the Atari in Tex or LaTex format (or any other non-hyper format) would be a mistake and a waste! The ability to "hyperactively" search through a document and make active references within it would be EXTREMELY useful to a "memory map" book like Mapping!

How many times in that book does it refer to, say, non-shadow locations, and other sections!

Besides, even an Atari (hooked up to a Unix machine) can use HTML! :)
Just get IceT or FT80 and run Lynx!

>
>

There's more than that wrong with GEnie. If I try to call with my Atari on their 2400 baud local numbers, I get a connect with no handshaking. It's been going on for months, and the guys there just scratch their heads. If I call at 19.2 (the fastest they go) with my clone, I get spurious jumps to areas I didn't request. Not only that -- it seems that their 19.2 lines, using SprintNet, were screwing up Zmodem transfers for some time. That's supposedly fixed.

On the other hand, my AOL software sometimes screws up the address when I try to respond to a message in this group, and the message never gets sent. They recognize that there's a bug, but they haven't provided a fix yet.

Oh, well, nothing's perfect ...

2708. Problem getting Games to work on XF25 XFormer emulator.....

Hi Atari users,

I have just recently downloaded the Xformer emulator for PC's + a few
ATR files. I have tried about 6 files and none will work properly.
This is what I'm doing:
At the PC DOS prompt I type, xf25 dos25.xfd filename.atr.
I type DOS at the Basic prompt and at the DOS menu I try to copy the
files from D2: to D1: , by typing D2:*.*
Sometimes it copies, sometimes it doesent. When it does copy I type
"L" for Binary Load, then the filename.extention. I got Bounty Bob
Strikes Back this far but it just Hung while it said it was loading.

I have looked in many Atari 8 Bit & Emulator Faq's, but still can't
get any answers to this one.

Thanks In advance for any help.

DJ.

Hi Robert,

The Atari SIG of PACS was the Philadelphia Atari group that I was refering to. Things were looking rather grim for them about a year ago. I have heard nothing from them since.

I have not heard anthing about JACS for some time. When I was trying to locate Atari User Groups for NEAR*US, was no response from the Jersey Atari Computer Society. I had to contact them several times using several different addresses. I did locate some locate some ex-members who believed the group was either defunct or just a few users who still got together socially. Do they still exist?

Wish you the best of luck with getting a 8-bit user group together. Keep on plugging, it will take a while to find the needed 8-bit users. They do still exist!

Take care, Jon

>of the graphics hardware.

I guess what I'm really asking is what's the difference in hardware
that allows the Commodore 64 to assign actual different colours to the
individual pixels in hi-res mode whereas the Atari must make do with 2
shades of one colour (I thought it was one gray shade and black,
assuming a black background?) and rely on artifacting to get the red
(green on the older machines like the 400 and 800, I wonder why this
is?) and blue that you see on games like the Ultima series,
Nightmission Pinball, A.E., Loderunner, etc..
I mean, for example, if you compare the C64 and Atari versions of
games like Hardball and Gyruss to each other, the C64 versions look a
lot better because of the higher resolution (especially Gyruss, it
looks horrible on the Atari) 320x200 vs. 160x192 for the Atari (and
Gr. 7 for Gyruss).
I think you mentioned a Super Video modification earlier, what exactly
is this?
Also, has anybody here done the PAL upgrade? I'm thinking about doing
it on my 130XE so I can play some of the newer PAL games (they act
weird on regular NTSC) and I visited the Web site but it didn't really
mention any places Stateside that sell the PAL OS (I think he
mentioned burning a new EPROM but I assumed that since he mentioned a
place in the US that sells PAL Antics that there would also be
somebody selling the PAL ROMs to go with it).

2714. Percom Disk Drive

I found a PercomData Disk drive at a bargain store and it has some odd interface on the bck of it. Somewhere I read that's it's supposed to be a parallel port. It's Model # is AT88-S1PD if that helps at all. It looks as if it's the same kind of parallel port that's on the back of an 800xl, but it also has a 34 pin connector, that almost looks like I could hook a 3.5" floppy up to it. Any info on this drive would be greatly appreciated, thanks..

I don't suppose you are running "Alternate Reality" on an emulator, are you?

Does anyone know if it is possible to play games like "Ultima III" or
"AutoDuel" on an emulator? They both require you to make a character disk
(if I'm not mistaken, it's been a long time), and save your games... I would
love to play these games again.

Janice: The real problem is that in North America we aren't making a PAL computer,
only swapping ANTIC. So, we need a modified North American OS, not the PAL OS.

(Kinda confusing, true.)

: > text format du jour. And if there are any real TeXperts out there who'd

: By "text format du jour", are you referring to HTML? If so, sorry, but
: HTML is not a Microsoft creation. And it is definitely going to be
: around for a long time.

I should not have been so terse--- I should have written "the Microsoft (or Adobe (pdf) or whomever) text format du jour, as others have suggested, though I do think it would be best to have it available in a format better suited for producing nice hard copy than HTML."

I find it a little ironic that another person who misunderstood the intent of my post was one of those suggesting formatting MTA with Microsoft Word.

: I've never heard of TeX nor LaTeX. Are they any better than RTF
: (Rich Text Format)?

TeX is a free typsetting program developed by the nearly legendary computer scientist Donald Knuth. His explicit design goal was to have a system for the creation of beautiful books that would allow authors to specify exactly what the printed page would look like in a fairly straightforward way, and in a way that would allow the printing of books specified in the TeX "language" irregardless of advances in printing technology. TeX has not changed significantly in over ten years. Version numbers of bug fix releases are converging on pi by adding digits; it's Knuth's wish that after his death the version number be set to pi (π) and the program not changed thereafter.

LaTeX is a set of macros by Leslie Lamport for TeX that automates layout and formatting. Both TeX and LaTeX are markup languages like HTML (or Daisy-Dot on the 8-bits) but with much richer syntax and capability.

Both are an established standard in academia, especially in math, physics, and computer science. Many if not most books and journal articles in these fields are written in TeX.

The output of TeX is superior to all but the highest-end PC/Mac WYSIWYG desktop publishing packages. The only one I've used that comes close is Framemaker, though I've been told that Quark XPress is heavily used in publishing and doesn't commit the most egregious sins of typical PC word processors (like not handling ligatures properly). I have not seen or

heard of anything that formats equations as beautifully as TeX (though this is not a consideration in formatting MTA). Once you get used to good typesetting, it is painful to look at Microsoft Word documents.

Anyway, since I think highly enough of Mapping the Atari that I would like to see it available in an attractive printed form for those that can't find an old copy, I'd be glad to work with anyone else who would like to get the ascii marked up.

: 30 PLOT 10,10:DRAWTO 10,30:DRAWTO 11,30:DRAWTO 11,50
: You'll see two different colours but the lines don't "line up".

Ok, I had forgotten this point (after all, my system is set up not to artifact. The Super Video mod is really something!). It's a little disingenuous to claim this gives you higher resolution or more detail, though, since you're limited as to *where* a line or point of a particular color can be, and to what its neighbor on the other half of the color clock is. I've always found the awkwardness of "working with" artifacting as well as the unaesthetic results it gives you not to be worth the trouble.

: Maybe your TV has the brightness knob up to far if the colours are really
: "bleeding".

My system is a SV 2.1 modified 800XL (until I get around to modding the 1200XL I intend to be my main 8-bit) with a Commodore split input (chroma/luma) composite monitor. It doesn't artifact. At all. The display quality is comparable to that of an analog RGB monitor. So it's painfully obvious when some Apple port relies on artifcating to get color- you don't see any, just stripes!!! Most of these use GR. 8 as if it were GR. 15, too, which is doubly painful, since it would not have taken much to do things right.

[Macintosh dribble deleted]

I was making a snide comment about how Apple][series machines do color, which if I remember correctly exploits artifacting on composite video displays. I think they even have hardware to do it, but I could be wrong on both counts. At any rate, it's mostly apple ports that exploit artifacting on the 8-bit Ataris in my experience. Anyway, we're both getting way way way off topic.

: more bandwidth to chrominance than luminance?

The 64 will artifact a little, but it seems to have a better video amplifier than the Ataris, especially the Atari XLs. The major problem I've seen on Commies is ghosting and very faint lines running down the screen between character cells.

And, if I remember right, the C64 could only do one color (of sixteen max) per character cell (8x8) in its 320x200 modes (character and graphic) with an independent screen background. The Ataris only allowed 2 shades of one color on 320 pixel lines, but made up for it with the overall flexibility of the graphics hardware.

>Nightmission Pinball, A.E., Loderunner, etc..

The difference there is that, where the Atari computers only have a few
color registers, the C64 has a color RAM which can hold a background and
foreground color for each character position (but only 16 colors to choose
from, except on the Plus/4).

I haven't heard of any such browser. You can surf the Web with an 8-bit
by using a shell account with Lynx on the host computer, and a terminal
program on the Atari, preferably a fast VT100 emulator like Ice-T or
Flickerterm.

PS: The Cleveland Free-Net was where I got my start on the Internet years
ago, using my 8-bit. Back then, the local university had a number where
anybody could dial in and telnet for free.

You need a program to convert atr files to xfd. One such program is called Imageman. XFD files contain an exact copy of the raw data on the floppy disk. ATR files have the same data, but with an extra 16-byte header at the beginning.

What's the big deal about keeping floating point out of printf?
The Atari's built-in FP can convert 16-bit intergers (signed???) to text
and much more and it only takes 2k.

(32-bit numbers could also be printed out.Just convert the high 16-bits of
the number to FP,multiply it by 65536,move it to FR1,convert the low
8-bits to FP,add it to the first FP,and convert the sum to text,and send
it out channel#0)

: : >
: : >Contact the Wesrern Design Center Inc and see if the chip is still
: : >in stock...
: : <snip>
: : Not exactly, there were at least two versions of the 800 CPU board.
: : The earliest ones used a standard 6502B & you could plug in a 65802
: : *or* 65C02 <same chip as the Apple IIC>. The later versions had the
: : 6502C so only XL type cpus will work. I have a 65C02 in mine, tried
: : to get a 65802 from WDC & they said "no longer made." All my other
: : sources for chips couldn't find an 65802 either. I never checked the

: : 400 schematics, but it's possible they all have a 6502B.
: : What I've noticed with the 65C02 is it allows you to write much
: : shorter code, maybe 30% tighter, relative speed does not readily
: : drop by 30% though because of addressing modes for things like
: : block moves.

: Uhh, 65C02 code is NOT 30% tighter.

: It's more like 5%. The only new instructions I can remember are:

: STZ
: BRA

: The Rockwell 65C02 has a few other ones like BBR and BBS, but those
: aren't in the Western Design Center 65C02.

ARGH!What do these new functions do?!?
Also include the ML codes.Among my many 6502 computers is a Apple][e Enhanced.
(an Apple 2 Enhanced Enhanced?!?)
One of the features of my Apple over normal ones is that it has a 65C02.
(I think the Rockwell one)
I could use the Monitor to enter in extra assembly codes.

2743. Re: HTML version: Mapping the Atari

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-06 00:00:00 UTC
From: "Kyle R. Hofmann" <rhofmann@crl.com>
Message-ID: <537ioo$8jl@nntp.crl.com>
Source record: 79856

In article <534tl8$sqk@nuke.csu.net>, William Kendrick wrote:
: I feel that putting Mapping the Atari in Tex or LaTex format (or any other
: non-hyper format) would be a mistake and a waste! The ability to
: "hyperactively" search through a document and make active references
: within it would be EXTREMELY useful to a "memory map" book like Mapping!

But you can add in hyperlinks! hypertex was developed to do just this;
basically it's a macro that goes like this:

```
\def\href#1#2{\special{html:<a href="#1">}{#2}\special{html:</a>}}
```

To add a link to, say, #foo with the text bar, you'd type:

```
\href{#foo}{bar}
```

And the output would be:

```
<a href="#foo">bar</a>
```

The main work is implementing the tools which use the \specials.
Specials are a type of token known as whatsits, which are used to make
extensions to TeX. Whatsits are not very common, as TeX alone is
extremely powerful. Furthermore, each whatsit must be handled
differently, because it is unique. However, a lot of work has already
been done.

: Besides, even an Atari (hooked up to a Unix machine) can use HTML! :)
: Just get IceT or FT80 and run Lynx!

Well, an Atari running Linux can use xdvi. But that's only for the
newer stuff, like Falcons and Hades. The older stuff can either:

1. Print it out.

2. Use latex2html (assuming that MTA is rewritten in LaTeX).

I, for one, have no knowledge of LaTeX, so I wouldn't be able to help
with the second. The first one is probably also prohibitive, unless you
have a Postscript printer hooked up to your 8-bit and dvips running.

OK, so maybe it's a bad idea. :) What if we converted MTA to HTML
first (probably a good idea) and then converted it to TeX? IMHO,
converting MTA to HTML would be fairly easy, considering the format of
the book. It'd look pretty close to the original. From that, the text
could be redone for TeX.

Crush, Crumble, and Chomp really is a lot of fun. I remember an even more primitive version called Godzilla for the old PET computer put out by Cursor, which showed that giant monster as simply a capital letter "G" that moved around a grid. You were supposed to choose from different weapons to kill the beast before it killed 20 million people. Things sure have changed...

: Please remember that not everyone is as well verse in using computers as
: some of you are.

Uh,you still have to know just as much about DOS with the ST as with DUP.
It's just that all the drive names are listed in GEMDOS (or whatever)
You just have to put a "D",followed by a drive number (if not the current)
and a colon and filenamt.If the file is in a directory,you put the
directory name,a colon,and then the filename.
And MyDOS comes with a manual on disk so there's no excuse for not
knowing how to use it.(i.e.not having the manual because you bought used)
(MtDOS will also except a ">" for compatibility with SpartaDOS)

: Yes, I am a big fan of batch files on DOS. And I would like to see them
: on the ST, but with my little mouse and menus it's not really necessary.
: Besides, if you want both mouse and batch files then you can always get
: Windoze 95...just drag a batch file onto desktop and double click. Maybe
: someday I write up a little program on my ST that can do that.

How does a mouse make the ST automated???

There's no startup file.Everytime I have to change the startup sequence,I
have to copy all the files out,delete them,and copy them back in the
required order.

: Tell you one thing though, once I got my ST...I never went BACK to
: AtariDOS menus. :)

Try MyDOS.It's a lot like AtariDOS but has some small fixups and extra
commands that makes life easier.
You don't need to press return after a command key.So you type "LAUTORUN.SYS".

(a return automaticly gets outputed to the screen when you press the "L")
And you just press a drive number to see a directory of it.
And sub-directories.And current drive/directory.
(so you can use any drive/directory as long as the programme doesn't
explicitly specify a drive#.You use "*" to see the current directory/drive)
And you can sector copy a disk.
(AtariDOS could only sector copy AtariDOS disks)
And there's commands (in DUP) to turn off read-after-write verrification.
And change the number of file buffers.And it works with hard disks.

(opps,missed this paragraph)

What's complicated about the PC?
You just type "COPY A: B:" and you're off!
MS-DOS also comes with documentation on-disk.(the "HELP" command)
And you can use XCOPY to copy sub-directories.
If you use the same options every time then an alias will let you not type
all the options constantly.
(though the options are one character long (or two with some) so I don't
see much use for DOSKEY aliases for this purpose)

Oh please,the Mac!?!?
I saw them in a computer store.I thought it was a little kid's computer or
something.They actually had little pictures of real-life controls! <ha!>
(in the "control panel",that is)
And no sub-directories,at least on the early models.
(I think "HFS" implemented them)

: >command with a filename.And any options.

: You CAN'T give any options! And you can't write a DOS 2.5 batch file.
: It's menu driven, not command driven.

Of course they have options.For instance,binary load files usualy contain
programmes (namely games).I would be anoying if you had to know the
address to run with the "M" (run at memory) command.
So they have autorun addresses in them.So all you have to do is use the
"L" command and the games/utility is off and running.
But what if you want to defeat this auto-running?
Just use the "N" option."L<RETURN>AUTORUN.SYS/N".
(under MyDOS,it would just be "LAUTORUN.SYS/N")

What do batch files have to do with command-lines?
Atari's "DOS XE" has a menu similar to DOS 2.5.But it has batch files.

You might think that batch files could be implemented under any DOS.
Just open channel#0 to a disk file.But the output would also go to that
disk file.A good solution would be a new device.A B:atch device.
For instance,you'd type "CLOSE 0:OPEN #0,12,0,"B:D:STARTUP.BAT,E:".
(obviously,you'd be doing this from TurboBASIC and not AtariBASIC)
This would (theoreticly) cause input to be read from a file and output to
go to the screen.This would make batch files independant from DOS,which is
GOOD.

: One thing I never under stood about Apple artifacting is they produced
: four extra colors. red, blue, green and purple. On the Atari you only
: get two, red and blue usually. How does the Apple produce the extra colors?

Did you ever notice that the screen dimensions aren't listed as "320x200"?
First of all,eight lines are missing.No mystery in that.Atari does it
too,but it can be overrided.
But these 192 lines are missing 40 pixels each.Why,you may ask.
Because the high bit of each byte of video memory is use to change the
palette from the normal green&blue to red&cyan.(or something like that)
Of course these palette changes work for each 7 pixels in a line.
While this is great for Ultima,it's bad for drawing programmes.
Try it,make a (filled-in) green square and then choose red and plot a
single pixel.You'll see seven pixels in a line change.

: >Right,two brightnesses and two artefacting colours=four. (different settings)
: >How do you figure that.If you take advantage of artefacting you still get
: >the same resolution.Try this.

: You can't control the color of the artifacted colors though, and they don't
: appear on all displays.

Well,obviously you need a colour TV and not a monochrome one.

: I was making a snide comment about how Apple][series machines do color,
: which if I remember correctly exploits artifacting on composite video
: displays. I think they even have hardware to do it, but I could be wrong
: on both counts. At any rate, it's mostly apple ports that exploit
: artifacting on the 8-bit Ataris in my experience. Anyway, we're both
: getting way way way off topic.

Artefacting occurs because the computer is using a partial TV pixel.
(that is,a "colour clock")

Any computer that uses 320x200 will artefact.This includes computers that
do 40 columns and that let you re-define the character set.
(and of course,the same applies to 640x200/80-columns,but with more
colours to choose from)

: >use the Static RAM Smaret socket circuit in Atari Classics...

The XL computers allow you change the keyboard layout without physically
modifying the OS ROM.There's a 192-byte table for this purpose.Normally
the Atari uses the one in ROM.But by changing the word at 121,you can give
the OS your own table to use.But I forget the format of the table.

Remember that all pointers like this are in lo-byte/high-byte format.
Put the low byte of the address in 121 and the high byte in 122.

: Thanks Maddog - "language disk" sounds pretty familiar, now you mention
: it!

: Does this mean that when TOS loads, the first thing it does is look for a
: program to run off the system drive (in my case the floppy)? Does the
: floppy need to be "primed" in any way - e.g. to designate it as a "boot
: program" disk? How does the Atari know what to load off the disk??!!

I know that there's a way to boot a disk.

: Anyway, my general confusion aside - I guess I need to change my request
: to......

: HELP!

: Please can some kind sole post a copy of the "Control Panel" program for
: my Atari 1040ST?

Even though this base has "atari" in it's name,it's not for the ST.
It's for the HCS (Home Computer System) line of computers.
(as opossed to the ST or VCS lines)

: (P.S. If I download it onto my PC, am I still going to hit problems
: transferring it from MS-DOS format into whatever format the Atari floppy
: drive is expecting?)

It's not the drive that expects a format,but the DOS.
(though some drives may work at a in-compatible speed than a PC's.
Also the PC doesn't directly control the drive so it can't read all kinds
of disks formatted by computers that directly control their drives or
just have a more advanced controller)

GEMDOS and MS-DOS use the same format.But the PC drive controllers are
really "delicate" and any slight difference in the ST and PC controllers
can cause problems.

: Again, any further invitations to visit "wisdom rocks" most gratefully
: received.

: Thanks

: bank switching as "switching between banks so fast that it tricks the
: system into accessing more memory". Ugh. I think at least one mag
: even attributed the on-screen flicker to the bank switching (and not the
: fact that the 2600 was putting the player's ship, UFOs, shots, explosions,
: and about a dozen free-floating multicolored rocks on the screen all at
: once using only two sprites).

It couldn't ALL be used for the cartridge!
Where would the other chips map in to?
There has to be a I/O space.
And what about the (little) RAM?

: The later 2600 cartridges (Solaris, Radar Lock, Road Runner, et al) had
: ROM sizes in the 32-64K range. It's amazing what even the anemic 2600
: chipset can do when given enough RAM and ROM to play with.

: >: of these conversions? They had strange names for example there
: >: GALAXIAN game was called "COMMUNIST MUTANTS FROM SPACE." Is it
: >: possible to Convert these cassettes I have to A PC disk for use with
: >: the 2600 Emulator?
: >
: >That last sentence made no sense.Well,it made some sense,but got confusing
: >at the end.

Oh wait,it makes sense now.The last sentence was just too long to fit into
my limited stack space.

: It all makes perfect sense. Several folks are working on 2600 emulators
: for the PC, and this guy was wondering if it's possible to copy the Super-
: Charger tapes to a file and plug them into one of these emulators
: (doubtful).

>
>Freddy.
>offen300@hio.tem.nhl.nl
>(editor of Mega Magazine)

Yes, I am thinking about the hard disk recording too, especially
because I am Falcon owner and such capability offerred by this
machine gives a lot of fun. Unfortunately, with the IDE emulation
mode any writes to the disk are very slow :(but hard disk
replaying is possible as well. :) I think, that it may be done in
this manner:

1) replay routine on interrupts (e.g. Pokey Timer or even DLI's,
but those last may need GR.8 or similar display mode).
2) a 'normal' routine to read a file into buffer.
3) dual-buffering

Algorithm scheme:

1) open a sample for reading
2) read a part of the sample into buffer A
3) start replaying buffer A
4) read next part of the sample into buffer B
5) wait until the buffer A is replayed
6) immediately switch to replay buffer B
7) read next part of the sample into buffer A
8) wait until the buffer B is replayed
9) immediately switch to replay buffer A
10) if not EOF then GOTO 4 ;))))
11) stop playing
12) close sample

I think, that maximum sample rate may be about 15kHz;
7.5kHz should be easy to do.

8-bit A/D and D/A converters would be very nice thing.

Greetings

KMK

I'm currently learning how to automatically create and maintain large
hypertext documents. In our class, we're using TeX with some additional
command, for example "\HCode{}" to insert specific HTML codes. Other
existing tags take on HTML meanings, for example "\Link" acts like
HTML's
HREF, providing links to anchor points across pages or within the
current page. An output module called "dviht" then converts TeX's .dvi
output to HTML.

The system seems well-suited to generating a large, reference-style HTML
document. You could use the logical structure and automatic management
of
TeX to make a _Mapping_ source document, then output it in HTML for
everyone to use on the web.

We should get Rob Funk in on this discussion. He actually _likes_ using
TeX. <grin>

I have a program lying around that will convert RTF documents (easily
saved from Word) to HTML. It works quite well. It's called, of
course, rtf2html.

OK, then how about Linuxdoc-SGML?

It's a system closely related to both LaTeX and HTML (HTML is an
"instance" of SGML, or something like that -- SGML terminology is
weird), originally intended for the Linux Documentation Project. From
a single source file that looks like HTML, you can create HTML,
postscript, plain text, and other formats. It would be perfect for
this sort of thing.
And yes, it handles hyperlinks.

Cool. I don't quite see how the HTML stuff gets all the way to the
DVI without modifying tex, but I'm definitely interested in this.

BTW, I think it was Kyle who said LaTeX can't do books but TeX can,
which is wrong; LaTeX has a class for books. The difference between
LaTeX and TeX is that (theoretically) in LaTeX you are more concerned
with the structure of the document (also the original intent of HTML
and other SGML document types), while in TeX you must worry about the
look of the document.

I think the LaTeX approach is better, although LaTeX's implementation
of it is IMHO incomplete, requiring the user to know too much raw TeX.

>We should get Rob Funk in on this discussion. He actually _likes_ using
>TeX. <grin>

I like using LaTeX, and I'll use raw TeX if I have a good macro
package that hides most of the raw TeX.
BTW, there's a cool graphical interface to LaTeX called LyX, which
makes writing logical LaTeX documents much easier. I doubt it can be
ported to the 8-bits. ;-)

Hi. I need some help
I have two 800XL's, one with all the ICs socketed?
The thing is, I built the Buchholz memory upgrade and
installed it on the socketed machine. It worked fine,
only that the wires to the 6520A used to loosen often.
So I decided to take out the IC, desolder the socket,
solder the wires to the board, and solder the socket
again in its place and reinstall the 6520A.
Well, the issue of desoldering the socket turned out
to be harder than I thought, so I decided to leave
it for another day, since it was already late. So I
made sure it was properly soldered in its place and
reisntalled everything as usual.
But after that, after I turned on the computer, the
only thing I got was a dark blue screen (not the
usual grey - yellow - sequence that usually comes
at startup). And it has stayed so since then.
Now I fear to try to solder (o desolder) anything
else. I've traced the connections of the 6520A's
socket, and they seem to be OK.
Has anyone some idea of what I could have done
wrong? Please help me?
TIA

From Don Thomas this weekend.
Did you hear anyone say "Goodbye"?
==========
by Donald A. Thomas, Jr. (10/4/96)

It's odd to imagine an institution, which was as big and as powerful as Atari
once was, to have been shut down in recent days. The real amazement for me is
that it was all accomplished without a measurable flinch from within or outside
the gaming industry. I can understand that gamers wanted to push Pong out the
door early in the timeline. I can appreciate that the classics such as Missile
Command and Asteroids do not push 32-bit and 64-bit systems to any technological
limits. I know all these things intellectually, but the heart cannot face the
truth that the world and the corporate machine known as Atari could not find an
amicable way to coexist.

On Tuesday, July 30, 1996, Atari Corporation took each and every share of it's
company (ATC), wrapped them all in a tight bundle and presented them to JTS
Corporation; a maker and distributor of hard disk drives. On Wednesday, the
shares were traded under the symbol of JTS. Within a few weeks, the remaining
staff of Atari that were not dismissed or did not resign, moved to JTS'
headquarters in San Jose, California. The three people were assigned to
different areas of the building and all that really remains of the Atari
namesake is a Santa Clara warehouse full of unsold Jaguar and Lynx products.

It was only as long ago as mid '95 that Atari executives and staff believed
things were finally taking a better turn. Wal*Mart had agreed to place Jaguar
game systems in 400 of their Superstores across the country. Largely based on
this promise of new hope and the opportunities that open when such deals are

made, Atari invested heavily in the product and mechanisms required to serve the
Wal*Mart chain. But the philosophical beliefs of the Atari decision makers that
great products never need advertising or promotions, put the Wal*Mart deal
straight into a tailspin. With money tied up in the product on shelves as well
as the costs to distribute them to get there, not much was left to saturate any
marketplace with advertising. While parents rushed into stores to get their kids
Saturns or PlayStations, the few that picked up the Jaguar were chastised by
disappointed children on Christmas day.

In an effort to salvage the pending Wal*Mart situation, desperate attempts to
run infomercials across the country were activated. The programs were
professionally produced by experts in the infomercial industry and designed to
permit Atari to run slightly different offers in different markets. In spite of
the relatively low cost of running infomercials, the cost to produce them and
support them is very high. The results were disappointing. Of the few thousand
people who actually placed orders, many of them returned their purchases after
the Holidays. The kids wanted what they saw on TV during the day! They wanted
what their friends had! They wanted what the magazines were raving about!

In early 1996, Wal*Mart began returning all remaining inventory of Jaguar
products. After reversing an "advertising allowance" Atari was obligated to
accept, the net benefit Atari realized was an overflowing warehouse of inventory
in semi-crushed boxes and with firmly affixed price and security tags. Unable to
find a retailer willing to help distribute the numbers required to stay afloat,
Atari virtually discontinued operations and traded any remaining cash to JTS in
exchange for a graceful way to exit the industry's back door.

Now that JTS has "absorbed" Atari, it really doesn't know what to do with the
bulk of machines Atari hoped to sell. It's difficult to liquidate them.

Even at
liquidation prices, consumers expect a minimal level of support which
JTS has no
means to offer. The hundreds of calls they receive from consumers that
track
them down each week are answered to the best ability of one person.
Inquiries
with regard to licensing Atari classic favorites for other applications
such as
handheld games are handled by Mr. John Skruch who was with Atari for
over 13
years.

In spite of Nintendo's claim that their newest game system is the first
64-bit
game system on the market, Atari Corporation actually introduced the
first
64-bit system just before Christmas in 1993. Since Atari couldn't afford
to
launch the system nationwide, the system was introduced in the New York
and San
Francisco markets first. Beating the 32-bit systems to the punch
(Saturn/PlayStation), Atari enjoyed moderate success with the Jaguar
system and
managed to lure shallow promises from third-party companies to support
the
system. Unfortunately, programmers grossly underestimated the time
required to
develop 64-bit games. The jump from 8-bit and 16-bit was wider than
anticipated.
In addition, Atari was already spread thin monetarily, but were required
to
finance almost every title that was in development.

After the initial launch, it took Atari almost a year before an
assortment of
games began to hit store shelves. Even then, having missed the '94
Holiday
Season, many of the planned titles were de-accelerated to minimize
problems
caused by rushing things too fast. Consumers were not happy and
retailers were
equally dismayed. The few ads that Atari was able to place in magazines
were
often stating incorrect release dates because that information changed
almost
every day although magazines deadline their issues up to 120 days in
advance.

It was in 1983 that Warner Communications handed Jack Tramiel the reins
of

Atari. By this time, Atari was often categorized as a household name, but few households wanted to spend much money on new software and the systems were lasting forever. No one needed to buy new ones. That, combined with Warner's obscene spending, amounted to a *daily loss* of over $2 million. Atari was physically spread all over the Silicon Valley with personnel and equipment in literally 80 separate buildings; not considering international offices and manufacturing facilities. Mr. Tramiel took only the home consumer branch of Atari and forced Warner to deal with the arcade division separately. Within a few years, Jack took the company public, introduced an innovative new line of affordable 16-bit computers and released the 7800 video game system.

To accomplish these miracles for Atari, Jack implemented his "business is war" policies. While people who publicly quoted his statement often felt that policy meant being extremely aggressive in the marketplace, the meaning actually had closer ties to Tramiel's experience as a concentration camp survivor. Of the 80 buildings in Sunnyvale, Santa Clara and Milpitas, almost every one of them were amputated from Atari's body of liabilities. The people, the work, the heritage, the history were fired or liquidated. Those who survived were unsympathetically required to fill in the gaps and while most tried, few actually found a way to be successfully do what a dozen people before them did. Atop the mountain, Jack pressed with an iron thumb. All Fed/Ex mailings were required to be pre-approved by one of a handful of people. "Unsigned" purchase orders went unpaid regardless of the urgencies that inspired their creation. Employees found themselves spending valuable time trying to find ways around the system to accomplish their jobs. Many of them lost their jobs for bending the rules or never finding a way to make things work. As horrible as it all sounds, it actually was the only way

to protect Atari as a company and give it a chance to survive as it did and did
very well.

Jack's introduction of the 16-bit computer was initially hearty in the United
States but it went extremely well in Europe. Europeans were not accustomed to
"affordable" technology and although the Atari computers were not IBM
compatible, it didn't matter because people could afford them. Jacks' private
laugh was that the computers were sold at prices much higher in Europe than
Americans were willing to pay. As a result, most of the machines made were being
shipped to European destinations to capture the higher margin. This enraged the
people in the United States that had been Atari loyalists. While waiting months
for stores to take delivery domestically, international magazines were touting
ample supplies. Those in the know within the U.S. became dismayed. The remainder
never knew Atari was slowly abandoning the value of Atari's name recognition as
it became easier and easier to forget some assuming Atari had long filed for
bankruptcy.

On a technical level, Atari 16-bit computers were designed beyond their time.
For less than $1,000, consumers could enjoy "multimedia" before the phrase was
ever really widely used. The icon-based working environment proceeded Windows
popularity although the essential attributes of the two environments were very
similar. MIDI was built-in and became an instant hit in the high-end music
industry. Tasks were activated and manipulated with a mouse and the system
accepted industry standard peripherals such as printers, modems and diskettes.

With all the genius that went into the technology of the machines, very little
of equivalent genius went into the promoting and marketing the machines. Mr.
Tramiel was the founder of Commodore Business Machines. When he introduced the
PET computer in 1977, Jack discovered he didn't have to call a single

publication. Instead they all flocked to his door demanding an opportunity to see the product. News magazines. Science Journals. Business newsletters. Newspaper reporters. They were all there with microphone, camera and pen in hand. And they kept coming back. Adding a switch, announcing a new 4K application or signing a new retailer were all big stories the press wanted to handle.

Today, a new video game announcement may generate a request from any of the dozens of gaming magazines for a press release, but a lot of costly work has to be done to assure fair or better coverage. Editorial people are literally swamped with technical news. Samples are mailed regularly to their attention. Faxes fly in through the phone lines and e-mail jams up their hard drives. It takes a lot to grab their attention.

While Atari retained hopes to be successful with the Jaguar, Atari's marketing people were fighting established standards in the industry with severe handicaps. Since cartridges (the Jaguar was/is primarily a cartridge-based system) were so expensive, editorial people were required to return them before new ones would be sent. Editorial people like to assign review projects. So finding cartridges they sent out was not always easy to do. Additionally, reviewers often love their work because they get to keep what they write about. Regardless, the few magazines willing to cover Atari products were more often turned away because of a lack of programmable cartridges or any number of other indecisive barriers. In-store signs and posters were sometimes created, but many retail chains charge premiums to manufacturers that want to display them. Some direct mail campaigns were implemented, but Atari often could not afford to keep those things being advertised on schedule. Therefore, the advertisements were published and distributed, but the product was not available.

Clearly, Jack's experience with the world beating a path to the door of a

company making a better mousetrap no longer applied. The world had revolved a few times beneath him and he never noticed. The tactics used to successfully sell Commodore computers were simply antiquated notions from the past. Meanwhile, Sony launches the PlayStation with over $500 million in marketing funds. Today, the PlayStation is considered the most successful next-generation gaming machine throughout the world. Sony bought the market. Tramiel's Atari never learned how to do that. Actually, they never could afford it anyway.

After the 1990's got underway, Europe as well as the rest of the world, discovered that IBM-compatible computers were becoming more powerful and more affordable. The world always did want computers at home just like in the office and companies like Dell and Gateway exemplified the industry's trend toward home-based office computers. As a result, companies like Commodore, Atari and Next couldn't compete any longer. While the dedicated user base of each of them felt abandoned by these companies having to leave the computer market, the inevitable prevailed. Commodore jumped ship, Next changed business goals completely and Atari invested what they had left in the Jaguar game system. Even today, Apple is kicking and screaming. As good as Apple was at creating a huge niche for themselves, they focused more heavily on education. When kids grow up and get jobs, they want business machines. IBM was always the business standard.

When one examines the history of Atari, an appreciation can grow for how many businesses and people were a part of the game over the years. Chuck E. Cheese Pizza was started by Atari's founder, Mr. Nolan Bushnell. Apple Computer was born in a garage by ex-Atari employees. Activision was founded by Ace Atari programmers. The list goes on and on.

But for some pathetic reason Atari's final days came and went with no tribute, no fanfare and no dignified farewells. Why? Where did all the talent go? Where

are all the archives? Where are the vaults? Where are the unpublished games and
where are the originals of those that were? Why has no company stepped forward
to adopt the remaining attributes Atari has to offer? Where are the creditors?
What has happened to all the properties and sites? Where are the databases,
warranty cards, promotional items, notes on meetings, unanswered mail? Who owns
P.O. Box 61657? Who goes to work in Atari's old offices? Where do consumers have
their systems fixed? Who is publishing new games? Who still sells Atari
products? Why are there still a lot of people talking about Atari on-line?

I'm an ex-Atari employee and proud to have been. I'm still an Atari devotee and
proud to be. To me, these are questions which all deserve an answer, but who
will ask them?

The best people to ask these questions are those who have exposure to the
public. If you believe Atari left us without saying goodbye, contact Dateline at
dateline@nbc.com. If you REALLY believe, then send this article to 10 of your
friends in e-mail. AND if YOU REALLY, REALLY believe, mail a few to newspapers
or other news programs. A letter in your own words would be great!

I'd spend money for a thorough retrospect on Atari. Wouldn't you?

Wouldn't it at least be nice to say "Goodbye"?

All good games. I couldn't pick one game, but a few of my top favorites
would be:

Star Raiders
Great American Cross Country Road Race
Spare Change
Ms Pac Man
Miner 2049er
Jumpman Jr.

STZ - STore Zero. Replaces the common LDA #0, STA addr sequence.
BRA - BRanch Always. Basically a relocatable JMP. often simulated
with sequences like SEC, BCS addr.

Dunno the numbers.

Now that's what I call being a survivor! But my goodness, if Atari really had anywhere near that many people in the early '80s, it's no wonder they had such a hard time during the great video game shakeout of the mid 80s.

Hello!

Well, I have been forced into a little bit of a situation. Recently I just
got a bunch of Atari stuff and was very excited to be able to start doing
some programming on it. Unfortunatley I have just learned that my acceptance
to an English private school in Japan has been accepted. So I have to 1)
raise some money, and 2) get rid of most of possesions! So here goes.

For sale, preferably as ONE package (in fact I am going to stress that!)

Here goes:

XF551 Disk drive, perfect condition.
1050 Disk drive, good condition.
Atari 130XE, great condition.
Atari 65XE, great condition.
Atari SX212, perfect condition.
2 remote joysticks.
A complete selction of all the versions of DOS i could find (on disk)
A selection of 10 cartridges.
Atari Paint unopened. Original defender in box.
5 pin monitor cable to work with Commodore Monitors.
All power supplies, + all cables (and extra cables).

I think that's it. A perfect way to start off with a complete set, or to get
some stuff you've always wanted!

this isn't for personal profit. I am honestly doing this because I have
ratehr than I want to. I ask kindly for serious and interested offers only!

Any questions or comments, feel free.

I have two Percom drives, a master and a slave. The interface is for
connecting a slave drive. Up to 7 slave drives can be daisy-chained to a
master drive.

Yes - the clocks are different and GTIA is different.

> I mean, say if I were to swap the Antic AND OS Roms for PAL versions,
> what would happen?

The OS ROMs are NOT different on PAL machines. The OS looks for a PAL GTIA and sets a flag in the computer for
PAL operation based on what it sees. If you put in a PAL ANTIC without changing the GTIA, the OS still thinks
he is on an NTSC machine. This will work for MOST PAL software. To do it up right, you must fool the OS into
believing it IS a PAL machine - without putting in a PAL GTIA, of course. Change the byte in $C386 to $01 and
your OS will 'see' a PAL GTIA all the time (also change $C000 to $12 to fix the checksum...).

You can't put a PAL GTIA in your machine since you would then need a PAL monitor to see color... OK?

This information is available from VOL. 4, NO. 2 of Atari Classics (plug, plug <G>)

I have been unsucessful in locating a working copy of Star Raiders in any of the Atari archives. I did find a version of Star Raiders with an .exe extension. At first I thought this was a self extracting archive that I could expand on my PC but I tried that and it didn't work. I also tried to put the .exe file into an Atari disc image and than run it from Atari DOS but that didn't work either. Does anyone know how I can get this file to work or alternatley where I might find a .atr or .bin version of Star Raiders?

I have also recently downloaded Pinball Construction Set from several Atari archives but have problems trying to run it on my 800XL. The game loads and works but the ball and pointer leave trails on the screen. Has anyone else run into this problem or does anyone know a fix for this problem?

Thank you for your help in answering my questions.

Thomas

I wouldn't doubt it. I recently came across some 2600 games that were in unopened boxes. They were in a carton at a local thrift store...

Unfortunately, some people don't see the value of things like that, and that sells mostly Commodore systems/software. He found out about 30 or so unopened XE Game Systems that were going to be thrown away, and managed to pick them up for the cost of shipping (from somewhere on the east coast).

Makes you wonder what's ended up on the trash heap...

A local thrift store I know of has about six boxed and shrinkwrapped
copies of London Blitz for the C64. Maybe I should pick one up.

And a version of it was listed in an issue of Analog (perhaps Creative) as a device that would ship in the Atari lineup of input devices with the revamped XL lineup. The picture showed someone playing a Breakout type game while seated in a chair.

Well WinWord IS MacWord, and seeing as I have MacWord and a great HTML
editor (from Claris no less) I would be more than willing to invest time
on this project with you if this would help.

Just send me the pictures in GIF or TIFF, and a few sample scans of full
pages so I can get the layout correct.

Yes, they are publishing standards that the users claim are the best
thing since sliced bread. Personally I find them odious, they're advanced
versions of 1960's style systems with embeded codes etc. Graphics support
consists of links out to external files and such.

PDF for downloads and HTML for web use is the only logical solution, and
I can back that up if you want to start that thread.

While I agree with the technical side of this portion of your post, let me disagree with the rest if I may. Books are formatted like books because they, unfortunately, have to be. It's not a great format and in many cases the wrong one entirely. TeX and LaTeX aside, the issue is the information and it's presentation - if all we want to do is copy books a TIFF image would be as good a format as any other.

But consider what happens when you convert to HTML or PDF formats. You get real cross platform for one, and public viewers that work well and are widely available. This is not at all true for TeX, which is limited to working in cumbersom tools that are often commertial and have limited distribution.

In addition with HTML we get what we wanted in the first place, hot linking to other items, live tables of contents, live indexing and a savable format (into text or picture formats).

And finally we get searchability and partial document support. Neither of these are really available under a markup system.

LaTeX lets us write a book. That's already done. HTML let's us extend it.

Dan,
You say never, ever, never, but I haven't seen anything that says
you shouldn't or that news doesn't or can't handle it. There are other
newsgroups that do. Is it just a policy? Is it just that most users her
can't read them or what? If you read my post closely, I did suggest
e-mail and looking at the archives with FTP or gopher. Personally, I
hate UUE/UUD files. They tend do be so messy, but if that's what it
takes, then use whatever does the job.
I'd really like an explanation on why you can't use MIME base64
file transfers in news.

According to Asger K. Alstrup Nielsen <alstrup@diku.dk>:
:Notice that you don't have to parse the string: You can look at the
:parameters. Are any of those floats? If not, skip the float part of
:the library. This is completely general.

This again says that the compiler must know something special about printf()
as a function, since otherwise, there would be no way that the compiler would
know that for that particular function, something special need be done about
it's arguments.

And of course it should also know about vprintf, sprintf,
fprintf, scanf, fscanf, sscanf, vscanf, ...

And of course, the _compiler_ isn't the place where the bloat is occuring -
but the linker instead. So this code really wouldn't go in the compiler but
the linker.

Which means now the compiler must embed the data types of each argument
into the argument list of every subroutine, causing all object code to be quite
a bit larger, so that an optimization for 10-12 functions can be performed.

It seems to me that if one is going to completely rewrite the compiler and
linker for a machine to support this small set of functions, an absolutely
better way to do it is to implement a sophisticated dynamic loading capability
where in nothing in the foundation libraries (like libc) is loaded until a
call to it is about to take place. That way the disk image need only contain
unresolved references, the dynamic run time support does dynamic linking
of just the needed modules on a case by case basis, and in the case of
any function similar to printf, where the auxilary support functions are
in separate object files, only the pieces actually invoked need to be
linked as used. As long as they are linked in one time only, then the
run time penalty should be minimal, and during loops, etc. the problem
should be negligible - if it becomes a problem, make sure that the
support object has an 'init' type function that gets called before looping
begins.

Also, if you're planning to run it on an emulator, some of them allow you
to "insert" carts (ROM images, that is) directly and run them. No need to
modify the dump or make an ATR file. Rainbow can do this, and I think some
of the others can, too.

To "dump" the cart, you need something like "DMPCRT.BIN" (which is in the
CIS 8-bit libraries). There is also a commercial product called "The
Impersonator" which works better, but adds some extra code to the ROM
image so it can be run from a special menu program.

Koronis Rift (from the Yogi archives) works with Rainbow, although the
GTIA graphics are a little messed up at the bottom of the screen. I've had
no luck with The Eidelon. Rescue on Fractalus works, but no mothership
screen while the game is loading. BallBlazer (and BallBlaster, the
pre-release version) also works, but no title animation. These are all
"cracked" versions, so I'm assuming that accounts for the missing titles,
etc. When I first started using Rainbow, I tried using a copy-protected
version of BallBlazer with it. It just does the title animation load
sequence and then displays a screen of "static" with the message:
UNAUTHORIZED COPY (or something to that effect). It's too bad you have to
run "cracked" versions of those old games on emulators. It would seem
possible to emulate "bad sectors" and such, but it hasn't been done as
yet.

-
-Ps... Thanks Yogi again... assuming you are the same Yogi

Yes, same yogi.
Unfortunately, I have yet to get any of those games to work with any
of the emulators. They were very heavily copy protected, and it was a
lot of work (for someone, not me!) to just crack them to run on non
copy protected disks. (Especially Alley Cat). It has something to do
with the timing of the SIO/CPU and all the other custom chips the
atari has. The emulators can't emulate that 100% (well, I guess they
could, but the overall speed would come WAY down).
So not yet........

It is not turning into a discussion on TeX. My point, which you omitted
from the above quote, was that TeX can be used to generate HTML. As a
side benefit, we could then make printed copies just as easily.

I don't think we're arguing over which is the best medium; everyone
seems to agree on HTML. We're now searching for the best way to
re-create _Mapping_ in that medium.

Tony, who wishes someone would just start OCR'ing! :-)

2813. WTB: Diamond GOS 3.x

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-08 00:00:00 UTC
From: richczeta@aol.com
Message-ID: <53f50a$e52@newsbf02.news.aol.com>
Source record: 79735

Hi,
I want to buy a Diamond GOS 3.x cartridge complete with all manuals,
software, box, etc. Please e-mail!

Also, I read somewhere that Genie (or CIS?) has archives of GOS software
in their 8-bit forums. Is this true? I don't have an account with either
service. Is there any way to get them from the internet?

Thanks,
Richard

richczeta@aol.com

>begins.

Well, no.

Dynamic loading/linking on the c64 or c128 is not feasible: External
communication except for REUs is simply too slow. Even with REUs, it's
too slow: if you need to link a routine on the 6502, you have to
either make it relocatable or patch the code so that jumps and memory
accesses match. The first alternative is very, very difficult to achieve
without speed penalty (impossible in most cases), and the second is also
slow: Worst case: Linear time with the length of the code.

The point with the other approach is that everything is done at *compile
time* and hence won't affect the runtime performance. It doesn't matter
if it takes 10 minutes to compile, if we get the double speed when we
run it.

But, it's unfeasible to build such a compiler on the c64. It would be
cross-compiling, and on a different platform, the cost of extra analysis
would be even smaller, especially when we have a lower bound on the
size of programs: 64k without dynamic memory. That's not much after
todays standards.

I don't think the gains only apply to a "small set of functions". I think
it is very relevant, and can potentially mean that a compiler for a high-
level language is feasible on the limited ressources available on the
c64, and within an order of two from the speeds of handwritten, optimized
code.

But I don't have proof of concept, and I am not able to produce such, so this is only theoretical.

Greets,

Asger Alstrup

: OK, so maybe it's a bad idea. :) What if we converted MTA to HTML
: first (probably a good idea) and then converted it to TeX? IMHO,
: converting MTA to HTML would be fairly easy, considering the format of
: the book. It'd look pretty close to the original. From that, the text
: could be redone for TeX.

I agree--- I think there is general agreement that MTA in HTML would be a Good Thing. And it really probably wouldn't be too difficult to get the base stuff redone in TeX. I looked at the original this morning, and it appears the hardest part to do really nicely would probably be implementing an "atari 8-bit" font for the listings. But that kind of thing is picking unnecessary nits, though it would be cool. In the hypertext version, the listings could of course be linked to tokenized files. The way I really envision people using an HTML version of a manual like MTA is as local files on their PC instead of over the 'net. Too bad there isn't even a lynx-like HTML viewer (as opposed to a full-fledged web browser) for the 8-bit, unless Bill Kendrick has been working on the one he started a while back. Would be useful for this kind of thing.

Once it's redone in TeX it can be distributed as dvi and postscript files, or even pdf if someone wants to use Acrobat to convert the postscript. (For those who have Acrobat reader on a Windows PC or Mac but no way to print postscript.)

2823. Archon Attacks

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-08 00:00:00 UTC
From: kisrael@diamond.tufts.edu
Message-ID: <53ek46$7m0@d2.tufts.edu>
Source record: 79745
Cross-posted to: comp.sys.atari.8bit,rec.games.video.classic,comp.sys.cbm

I'm tossing around the idea of making an Archon-melee style
game for up to 6 players (assuming I can get my uncle to help
me construct the multijoy adapter I have the instructions for)
And I was trying to think of what weapons Archon warriors had...

This is all from (my rather weak) memory
Archon the original game had 3 basic attack types:

```
Type Who Description
-------------------------------------------
Handheld knight short range, fairly rapid 'recharge'
goblin " "
-----------------------------------------------
Area-affect Banshee Mobile short field all around Banshee
Phoenix like Banshee, but 'flared up',
phoenix was invulnerable during flare,
but vulnerable right after
-------------------------------------------------------------
Thrown everyone Weapons of various speeds strengths and
else recharge rates. Did they all have unlimited
range?
```

Archon II I hardly played at all, but I remember these:

Kamikazee : little thing on rollers used own body as missle
did it take damage too, when it hit?

Invisible: How did this work? Am I remembering it right?

Screecher/Siren: Didn't need to aim or be near its opponent, just
did damage automagically. Did it freeze while
attacking? It was tough for novices to defend against.

Cruise Missler: (I might be making this up) Was there one that fired
a missle that the player then controlled, with the
player frozen til the missle exploded?

Anyways, if anyone can fill me in as to more Archon attacks, I'd love
to hear 'em- or even if you have clever ideas for 'Archon-like' attacks.
(i.e. character only needs one firebutton)

ObAtari: Anyone remember an Archon-like game from Antic magazine? I
remember one for sure that just had the melee mode, but these
cool looking character graphics, red brick background but
detailed player sprites. There was also one (maybe pre-Antic,
or early Antic) that was like a simple version of Archon, but

with a very rectangular screen.. any one taking this particular
nostalgia trip with me?

ObCBM: I remember two cool Archon like games from Compute's Gazette:
one was like Archon but had soldiers moving to defend these
hills-- I found out the Sys code to play the 1 on 1 combat
even after the game had stopped. There was also Crossroads
an INCREDIBLE maze/archon crossbreed with 10 different monsters
all fighting you and against each other, with *cool* explosions
I wouldn't mind finding a copy of that again...

-Kirk

Maury Markowitz (maury@softarc.com) wrote:

: While I agree with the technical side of this portion of your post, let
: me disagree with the rest if I may. Books are formatted like books
: because they, unfortunately, have to be. It's not a great format and in
: many cases the wrong one entirely. TeX and LaTeX aside, the issue is the
: information and it's presentation - if all we want to do is copy books a
: TIFF image would be as good a format as any other.

Maury, the reason books are still being printed, and will be for quite some time, is that they really are a pretty good format for delivering information. This topic has been hashed to death by others elsewhere, and I don't really want to get into it, because I do agree with your premise, just not with your overstatement of it. (I.e. I think hypertext is a good thing too)

If you really think TIFF images would be a reasonable format for distributing copies of books, you shouldn't even be trying to argue these points. The result would look absolutely awful, would be huge, and would probably have to be stored as 1-file-per-page...

: But consider what happens when you convert to HTML or PDF formats. You
: get real cross platform for one, and public viewers that work well and are
: widely available. This is not at all true for TeX, which is limited to
: working in cumbersom tools that are often commertial and have limited
: distribution.

All the standard tools for working with TeX and LaTeX are free. All that is needed to edit TeX or LaTeX is a text editor, just like HTML. TeX, as well as tools like dvips, ghostscript,etc., has been ported to every modern computer platform I know of. The end result can be distributed as dvi files, postscript, or even PDF, if someone is willing to use Acrobat to convert the postscript.

PDF cannot be easily edited natively without expensive commercial software (Adobe Acrobat), as far as I know.

: In addition with HTML we get what we wanted in the first place, hot
: linking to other items, live tables of contents, live indexing and a
: savable format (into text or picture formats).

I agree in essence here. Hypertext is cool and sometimes even useful. It's just that HTML as such does not usually produce really nice hard copy.

I wonder if that would be `legal`... or could they, in theory, charge us
for piracy? Are the old Atari 8-Bit games still copyrighted? or do the
companies not mind? It doesn't bother me as most of the software is over 10
years old... just a thought.

If someone can help crack these games so they work in an emulator situation
(ie: defeat the disk protection scheme) them please patch the file and up
it to a site and let us all know...

The emulator coders could write a simple routine to check the flag on a
sector.. if it matches the emulator's code for `bad` then the emulator
could just return the error to the program... copy-protection bypassed for
a majority of 8-bit games =)

: Well I did not intend for this to turn into a discussion on TeX.
: Suffice it to say that I know no one that has a TeX viewer, whereas
: everyone I know has an HTML viewer. I know of no online TeX documents, I
: know of an entire web full of HTML documents.

Actually IBM has a netscape plug-in for Win 95 and NT for viewing TeX.
Strange but true--- check it out:
http://www.ics.raleigh.ibm.com/ics/techexp.htm

There are TeX documents and Postscript documents all over the web.

The HyperTeX project (http://xxx.lanl.gov/hypertex/) provides augmented dvi
previewers for Unix platforms which allow hyperlinks. HyperTeX dvi output
distills into pdf with its hyperlinks intact (this is actually one of the
design goals of HyperTeX). I found this out by digging around right now---
HyperTeX is really pretty cool.

All this is really irrelevant. No one is trying to argue that TeX is
better than HTML for hypertext. HTML is certainly sufficient for creating
an online version of MTA or any other Atari manual. Where TeX really
shines is in producing hard copy.

As I've said before, it would be nice to have MTA available in a format
amenable to producing high quality hard copy, and I'd be willing to put in
some time getting it there. From the response this thread has provoked, it
seems I'm not the only one.

At this point, what we should be discussing is who is going to scan it in
so that folks that want to work with the text can get started. :)

Juggernaut. When it was actually attacking (i.e. picked up speed to inflict damage), it was invincible.

> Invisible: How did this work? Am I remembering it right?

The Wraith. Not only was it invisible (unless attacking), it *fed* on its opponents energy. When the Wraith was successfully attacking, its own power *increased* corresponding to the decrease of the victim. This is my favorite piece in Adept.

> Screecher/Siren: Didn't need to aim or be near its opponent, just
> did damage automagically. Did it freeze while
> attacking? It was tough for novices to defend against.

Siren. Yes, it was stationary while attacking. It didn't have to be near the opponent. The only wasy to beat the Siren was to charge it ASAP and hack the hell out of it.

> Cruise Missler: (I might be making this up) Was there one that fired
> a missle that the player then controlled, with the
> player frozen til the missle exploded?

You must be thinking about the Adept itself.

2831. HTML version: Mapping the Atari

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-08 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <325aec9c@pianosa.demon.co.uk>
Source record: 79753

Whilst reading the usual rubbish I find here, Maury Markowitz wrote something
interesting to All about HTML version: Mapping the Atari:

Hello Maury,

MM> Well I did not intend for this to turn into a discussion on TeX.
MM> Suffice it to say that I know no one that has a TeX viewer, whereas

I'll hold up my hand to that one. Yes, I have a TeX viewer. TBH, I don't know
why I still keep it. Or the TeX processor that goes with it. My need for them
died several years ago, when I got hold of a decent word processor.

MM> everyone I know has an HTML viewer. I know of no online TeX documents,

One of those, too.

MM> I know of an entire web full of HTML documents.

HTML would appear to be the "correct" way of going about putting "Mapping..."
out there.

I have just added 55 TurboGrafx-16 / TG CD / Duo game screen shots to
my WWW site. This brings the total number of ORIGINAL screen shots
on-line to 1010, for the following systems:

Atari 2600, Atari 5200, Atari 7800, Colecovision, Mattel
Intellivision, Magnavox Odyssey2, Emerson Arcadia 2001, Bally
Astrocade, Atari 8-bit computer, Commodore 64 computer, Commodore
Vic-20 computer, Tomy Tutor computer, 3DO, Sony Playstation, SMS, NES,
SNES and TurboGrafx-16 / TG CD / Duo.

More will be added as I have time. Eventually, I will have my entire
collection on-line (hopefully before the turn of the century :)

The Sega Genesis / Sega CD / Sega 32X are probably next in line.

If this is of interest to you, the URL is listed in my sig.

Michael

P.S. And before anyone else asks; if the game isn't on one of my FS/T
lists, it isn't FS/T :)

I own the copyright to Mapping the Atari, not Compute! Books. If you'll
check out the revised edition, page ii, you'll see the copyright notice.
There's no legal hassle here: when the revised edition was published I
retrieved it from Irata and kept it.

Hmmm. Never saw that one. Can anyone tell me more - like where to get it?
I've heard there's a clone book from TWAUG around. Is this it?

> - Mapping the atari.
>
> http://graf.fciencias.unam.mx:100/~mariano/

Don't do anything with any of them. Some are still owned by their authors -
like me. I have the copyright for Mapping and while I'm willing to put it
together and post it for general use, I want to be in control of the
project so it stays my work.

If you really want to help, then you can scan the pages of Mapping (revised
edition) into text format files and email them to me directly. I want to
rebuild the book, incorporating the indexes into the main body, and add
HTML code for cross-references. I'd appreciate the text files. But please
don't post them. I'll put them up on a site where everyone can get at them
and redistribute them later.

Thanks.

If it's not a SuperCart all you have to do is Dump the contents of the cart
to a diskfile... then i think you need to add relocation code to the
beginning so DOS
can re-load it into memory at a new address... it's been SOOO LOOONG... =)

I am sure someone else will be able to give you more prescise
instrctions...

I can not get the Lucasfilm games to work either... and if i remember
correctly it's cause they are disk-based copy protected... i has both
"koronis rift" and "the edilon" on floppy and rught after the title screen
the drive would chunk/whirr/buzz for a few seconds before loading...

mabye someone with the know-how would 'patch' the game so it runs if it
doesn't find the protection... =)

I gather it depends on the emulator. Rainbow would be able to do that--you
can "insert" virtual disks at any time, just like the real thing. Don't
know about XFormer--I have a Mac and have never tried it*--but from what
I've read here, it seems you start it up with a disk image with no option
to switch disks while it's running. I may be wrong about this, though.

* Actually, I did try to run XFormer once using SoftPC 2.0 on a PowerBook
Duo 250. Didn't work. I guess the "hardware"--an emulated 286--wasn't up
to the task. ;-)

>get any answers to this one.

Well, the answer is simple.... get a real ATARI. The problem with a LOT of
software, is they actually use direct hardware calls to access a disk drive.
I have found that most emulators cannot handle this, and so everything goes
BUNG!
I have seen the demo version(s) of XFORMER, and tried out a lot of stuff. Only
about 5 percent of our software will actually work on them. I know this seems
a downer for emulators, and I hope they keep up the good work with them. BUT!
there is only so much an emulator can do....

Ok, the first thing you should check out is the SIO2PC cable. (you obviously are running a IBM PC?) go to www.hackerz.com ,and check their ATARI retro site. Then once you have the cable (and info on how to use it), go to ftp3.cyberspy.com/atari/yogis_site for ANY SOFTWARE u WANT! If you need any more help, feel free to email me at stev@networx.net.au

>day. If you, like myself, agree that this is not the point of electronic
>distribution, then let's not even try.

Actually, that gets back to why I prefer LaTeX (and good SGML DTDs)
over TeX. The important thing is the organization, and looking good
in every medium.
Quark is not free. TeX is.

>> All the standard tools for working with TeX and LaTeX are free.
>
> And on many machines unavailable, expensive or poor quality.

It's available on EVERY modern machine. This includes Macs and PCs.
It probably even includes STs and Amigas.
It's not expensive, it's free.
And it's higher-quality than almost anything out there.

>> is needed to edit TeX or LaTeX is a text editor, just like HTML.
>
> And it's suitable only for a professional. Sorry, did someone miss the
>GUI Revolution?

"Suitable only for a professional"? What in the world do you mean by
that? It's not hard to learn.
As for GUIs, they're great when the primary focus is the way something
looks (e.g. pictures). But they are counterproductive when you care
more about the writing and its organization.

>> PDF cannot be easily edited natively without expensive commercial software
>> (Adobe Acrobat), as far as I know.
>
> Whereas TeX can only be edited by expensive commertial users. We're
>talking read-only here.

You're making no sense here. TeX can be edited by anyone with a text
editor. It can be printed by anyone with a 90s computer.

>> I agree in essence here. Hypertext is cool and sometimes even useful.
>> It's just that HTML as such does not usually produce really nice hard copy.
>
> So? Is that what we even WANT? If you want the book, buy it, I see it
>advertized all the time here.

I can't speak for Ian, but when I produce documentation my goal is for
is to be readable and look professional whether it is online or on
paper.

I think maybe the current version of Rainbow is called "Rainbow 95",
because it works with Windows 95.

2853. Atari 8-bit For Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-09 00:00:00 UTC
From: "Richard L. Johnson" <rmjohn@avana.net>
Message-ID: <325BED35.5A43@avana.net>
Source record: 79681

Unfortunately, the time has come to sell off my old Atari 8-bit equipment. I have not test any of the following equipment over the past year. It has been in storage. All of it did work flawlessly when it was stored last year. I would prefer to sell it all as a group, but will break it up into smaller groups if I have some solid offers. I am local to the metro-Atlanta area.

Hardware:

Atari 800 XL computer
Atari 600 XL computer
Atari 1050 disk drive
Atari 410 program recorder
ICD P: R: Connection
Best Data 2400 baud modem
Boss joystick (Wico)
Atari joystick

Carts:

Basic, Asteroids, Space Invaders, Dig-Dug, Pac-Man, Donkey Kong

Disks:

(original)

Lode Runner
Pooyan
BC's Quest for Tires
Koronis Rift
Planetfall
Spy Hunter
Ultima III
Ninja
Racing Destruction Set
Autoduel
Kickstart
Hitchhiker's Guide to the Galaxy
Bankstreet Writer
Fix Up the Mix Up
Witness
several Antic cover disks
(and of course) DOS 2.5

I also have a file of over 50(?) disks with copied/cracked versions of hundreds of Atari 8-bit files

Books:

The Creative Atari
Atari Sound and Graphics
Mapping the Atari (revised edition)
Compute's First Book of Atari Games

I am asking $200 for the lot of it. However, I am open to offers below this. I am also open to offers of trades for Macintosh hard/software, car stereo equipment, or law enforcement related equipment.

Thanks!

Richard

At least the earlier ones. Later games (1983 and on) used more
sophisticated copy protection than "bad sectors." I recently got a 1985
book called "Advanced Atari Copy Protection" which describes some of
schemes used. Many relied on undocumented peculiarities of the OS and
drives and non-standard disk formats.

Also, I understand the ATR file header has flags for bad sectors, but
apparently no one's utilized them so far.

ASharkis (asharkis@aol.com) wrote:
: Hey, guys, I have all four emulators, and I can state that not all work
: with all programs. But it gets more complicated. I see specific
: complaints here about some emulators not running some programs, and the
: same emulators do on my machine. I also see raves about how some programs
: run on some emulators and I can't get the combination to run on my system.
:

: This emulator stuff is turning out to be as "iffy" as anything can get.

I can't get SuperDOS nor SpartaDOS to run.I think it's becuase they access
the POKEY chip directly.(SIOV doesn't suport UltraSpeed)

: But, I continue to applaud the efforts. You never know what somebody
: who's developing one might run into that would take him/her away from the
: task. You also never know what kinds of things somebody can run into that
: prevent or slow down further development.

: Have patience. We should have much better emulators from all four sources
: (and who knows who else?) by the end of this year. Or next year. Or ...

Xformer is nice to run some of those SLOW BASIC games.
StarFleet runs a lot faster too,but without artefacting.
(the ships are all white,as is the force field display)

: Or, try using a real 8-bit!

That's what I say.But that damn APE cable is $60!
(So is the ProSystem one)
I'd end up spending $100 just to play games,never mind the ProSystem cable
to back up my boot disks.

You know, I have this beef with using years in place with verson numbers. They make the programs already obsolete! My guess that they either got the idea from the EA Madden series or COBOL which used the same system.

Well I think Billionare Bill must have been impressed with COBOL considering it's such a stone-age language to use. Hey, I took that course in college one and it was a real pig.

To make things easy, why not just Rainbow 1, 2, 3....just like Sonic 1, 2, 3...oh you know :)

You should try out the APE system.It sounds like it would be great for
backing up saved games while playing them.You just press "!"
(on the PC side)
to get a shell,and use the COPY command to make a back-up of the ATR file.

I'd have the APE (SIO2PC) cable but it costs $60 and I'm looking for a
cheaper alternative.
(APE is $40,the SIO2PC is $60=$100)

Star Raiders 2 was such a rip-off.It was nothing like 1,which was better.
Star Raiders should've simply have been updated for 48/65k operation.
(They could fix the range bug.The "Range" part of the cockpit would only
display a correct value if the object was directly fore or aft
(ahead or behind))

Though it was pretty.

If what you stated is correct? Then you messed up when you put in the socket..you need to cut out pin 15 and 16, therefor the socket has to have these pins eliminated ot the traces cut on the board to these pins..
The docs say to lift them out that means eliminate these traces from the board..you can cut these traces on the bottom of the board and leave the socket alone.

Then attach the wires to pin 15 and 16 per the instructions on the bottom of the board to pin 15 and 16...clear???yea I know clear a mud..

If you solder a socket into any board with any modification, you need to eliminate these traces from being accessed. So either lift the pins again or cut the traces from the board to the pins required and install the wires to the underside you cut from..

You should use MyDOS,since it checks to see if the binary (load) file is
corupted.
(it'll give error 180 if it's not a binary load file,181 if it
corupted/contains insane data)

Hello Atari 8 Bit System User,

As many of you know, will be on 26th of Okt. 96 the ABBUC
JHV fair

here a copy of the Official Homepage of ABBUC e.V.
from

Marek Tomczyk

http://www.uni-karlsruhe.de/~Marek.Tomczyk/8bit.html

and

Stefan Lausberg

http://wwwcip.rus.uni-stuttgart.de/%7Einf11492/abbuc/

11th ABBUC Annual Meeting, 1996
This year's ABBUC annual meeting will take place on Saturday,
October 26, 1996 in Herten (Germany). Like in all the years before, it
will start off in the "B�rgerhaus Herten S�d". This meeting is the main
and most important event for all Atari 8-bit fanatics in Germany and
Europe since it's surly the biggest one left. With ABBUC's 540 members
worldwide you can expect a great feast. If you're looking for audience to
present the fruits of your 8-bit development, surely there can't be a
better place than this one. Following are the details of the show.

Timetable:

10 a.m. - 11 a.m. preparation of the booths
11 a.m. - 1 p.m. Club's main meeting (see below)
1 p.m. - 5 p.m. computer-show
Following: nice come-together in a restaurant

Agenda of the Club's main meeting

1. Welcome
2. Report of the managing-committee
3. Cash Report
4. Cash Audit Report
5. Reports by the Regional Groups
6. Various Topics

Something that you could not read there is the fact that Armin
Stuermer is not at the fairy. Charlie Chaplin will be at the JHV
and show/sell the Portronic/AMC hard- and Software.

There will be:

KE-Soft(The Brundles- perfekt Lemmings Clone ,
Kaisersoft(Polensoft/Topmag)
Many regional Groups from the ABBUC (Arg`s and other
Hard-/Software
Highlander Software (XFormer Help, TB Coder ...)
Charlie Chaplin (AMC/Portronic)

- The ABBUC Head
W: Burger (Big Boss)
Mr. "Floppy" P�tz
Mr. J. Kuepp (Manuals)
... (Sorry,i don`t know all their names)

hopefully with many ???
could be fte at the fair (many ?????)

Their should be some new Hardware that gives you options to
use your loved system for many more years.

If you want more Info`s look at Marek Tomczyk`s Atari 8 Bit
Resort or

There's not really a need to use a "boot" disk like on PC's and 8-bits,
unless it's the first ST models that have TOS 1.0

> Even though this base has "atari" in it's name,it's not for the ST.

Thumbing through my "utility" copy of "Mapping" (as opposed to the mint condition one I keep on the shelf) I see a few things scribbled in the margins. After a quick scan of the book, my best suggestion is to include hex equivalents of the marginal adresses in Appendix Two.

Some of us don't bother thinking in decimal! ;)

David Bennett (sunlord@zap.io.org) wrote:
: Here goes:

: XF551 Disk drive, perfect condition.
: 1050 Disk drive, good condition.

A note about these.The XF551 doesn't report a "sector not found" error
corectly.It also won't format the back of a diskette.
So you should make the 1050 drive 1 so you can boot alright.
(there are no 256-byte sector boot games)
And the 1050 can be used to format the backs of disks.
There are some nice upgrades for the XF551.
The XF551 had some kind of "super-speed" operation but it wasn't UltraSpeed.
My SpartaDOS X cart is supossed to re-programme it for UltraSpeed,
(it has RAM for controller programmes to load in to)
but I only tested INDUS.SYS with an actual Indus GT.SpartaDOS 3.2x is also
supossed to address this problem.

: Atari 130XE, great condition.
: Atari 65XE, great condition.

The 130XE keyboard was horrible.It just wore away.It was a membrane type
with real keys on top.The hidden membrane's circuit traces wore off.

: Atari SX212, perfect condition.

Tended to crash on me.I had to turn it off and on.
(not so much that it was uselss,though)

: 2 remote joysticks.
: A complete selction of all the versions of DOS i could find (on disk)
: A selection of 10 cartridges.
: Atari Paint unopened. Original defender in box.

Is that the one that needs BASIC?
(on my "Paint" programme,you CAN'T hold down OPTION or it won't work)

: 5 pin monitor cable to work with Commodore Monitors.

A must!Sure beats switch boxes.

: All power supplies, + all cables (and extra cables).

-> the drive would chunk/whirr/buzz for a few seconds before
loading...
-
-Same Problem here, I love alot of the Lucasfilm games, and Karateka,
but I
-am having the same problems. also the same with the SPY Vs Spy
series.. if

The games are not the problem, the DISK copy protection has BEEN
removed already. It's the timing of the emulation that's the problem.
The only thing to do is look for binary versions of the games, I
believe Spy Vs Spy is already in the archive, but the other games its
not feasable to convert to binary load as they have disk access. (It's
not impossible, just not feasable).
BTW, the probably reason the Eidolon doesnt run is that it requires
64K which the emulators I understand don't emulate correctly.

: > I've never heard of TeX nor LaTeX. Are they any better than RTF
: > (Rich Text Format)?

: Yes, they are publishing standards that the users claim are the best
: thing since sliced bread.

But they are! <grin>

: Personally I find them odious, they're advanced versions of 1960's
: style systems with embeded codes etc.

The difference between what most people are used to (M$ Word and
Wordperfect) and TeX is that, while WYSIWYG with Word et al, WYSIA*A*YG
[What You See Is Also *All* You Get], by using TeX, you can create things
which Word et al users could only dream about doing easily, if at all.
This especially applies to mathematical typesetting; TeX has amazing math
support.

: Graphics support consists of links out to external files and such.

Many books don't have or need pictures; those that do can be added via
\specials and changes to the output routine if you're insistent on doing
everything in TeX, or with another tool. The TeXfaq has more info on
this; if you want, it's at any CTAN [Comprehensive TeX Archive Network]
site (ftp.cdrom.com mirrors it in /pub/TeX/ctan, ftp.dante.de is a part
of CTAN, beginning at /tex-archive). You could also ask on comp.text.tex.

: PDF for downloads and HTML for web use is the only logical solution, and
: I can back that up if you want to start that thread.

It's not the _only_ logical solution; there's a lot of other
possibilities as well, and one of them is TeX.

-Kyle R. Hofmann

2879. Mapping the Atari - HTML version

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-09 00:00:00 UTC
From: Ian Chadwick <ichadwick@georgian.net>
Message-ID: <01bbb590$760863c0$53a065cc@ichadwick.georgian.net>
Source record: 79756

Just FYI to the people who have approved of the suggestion to create an HTML version of Mapping...

I started scanning the book tonight. With editing (required since the OCR reader is far from perfect) and coding, I figure it will take me a month-6 weeks. If anyone wants to help with the project, scan the appendices, preface and introduction and email them to me in text format.

I will greatly appreciate the effort because I can only use the scanner after work and sometimes after putting in 10 straight hours, I don't want to spend a lot more time in the office. I still have to bring the files home, edit them against the original text and add the HTML code. So it will take a while.

In the meantime, if anyone has corrections or additions, please email them to me in text format in the same structure as Mapping. I'll include them as I go along.

I plan to put the files online in a suitable Atari-related ftp site, as well as directly on the Web for anyone to download. I'll upload the first file as a test Web site shortly and let the group know where it is. My only request is that the material not be used for commercial purposes.

A lower tech way of doing everything at compile time is building
an "stripped down" library of functions, which are used when the
additional capabilities are not required. (A) No proof of concept is
required, and (B) source for both the lowest level of capabilities (Small-C)
and the full-fledged capabilities (GNU) is available.

Unlimited range. Unicorn/Basilisk(sp?) ruled!

>Archon II I hardly played at all, but I remember these:
>Kamikazee : little thing on rollers used own body as missle
> did it take damage too, when it hit?

Juggernaut. I don't remmeber if it could be hit while
in attack (but I wouldn't be surprised if it could)

>Invisible: How did this work? Am I remembering it right?

One of the demons had this, I don't recall what it was called
(looked like an old bearded guy). You'd reappear whenever you fired a
shot or tried to run through a penetrable obstacle.

>Screecher/Siren: Didn't need to aim or be near its opponent, just
> did damage automagically. Did it freeze while
> attacking? It was tough for novices to defend against.

I think it froze while attacking, otherwise it would be just
too damn evil.

>Cruise Missler: (I might be making this up) Was there one that fired
> a missle that the player then controlled, with the
> player frozen til the missle exploded?

The Adepts had these. While you could control your attack, it
was a bit of a challenge. slight turns weren't a problem, but any
significant turn (90 degrees, or even a full 180) caused the projectile
to stop for a moment then speed off in that direction. This was also
the weapon used if you cast Apocalypse.

>Anyways, if anyone can fill me in as to more Archon attacks, I'd love

The Gorgon had a unique missile attack, the first one or two
hits did minimal damage, the next caused instant death no matter how
much strength the victim had. My ArchonII demon of choice. >=^)

The Chimera(?) had three attacks, fire(?)bolt, fireball, and
tail sting. the first two were projectiles, the third was a melee
strike (like the knight/goblin). Your attacks cycled through the
three. (so often I'd use the first two, then waste the sting =^)

Also the obstacles in the air zone would deflect projectiles
fired into them, creating a pinball effect.

>to hear 'em- or even if you have clever ideas for 'Archon-like' attacks.
>(i.e. character only needs one firebutton)

only thing I can think of offhand, and probably difficult to use
or defend against depending on how implemented, is like the juggernaut,
except this one _jumps_ on it's opponent. A side benefit of it is being
able to leap obstacles. Just a starting idea.

>ObAtari: Anyone remember an Archon-like game from Antic magazine? I
umm, no I grew up on a Apple //e. =^) My friends had C64s. At
best, my cousins had a 1200xl, but they weren't much into computers.

>ObCBM: I remember two cool Archon like games from Compute's Gazette:
haven't seen that one. Only games I recall we being hooked
on from Gazette were LazerChess and Powerball.

: -Peter Cline

The same thing happened to me... just a few weeks ago <magic sound>
a 600XL landed on my doorstep.
You might want to look for 8-bit atari web-pages. Lots of
info. Then about compatibility: With respect to catridges (my main
use at the moment) it's compatible with almost all the catridges
made for the atari. Except for the catridges made xplicitly for the XE game
system: To run them, you need to upgrade the 600XL's memory to 64K.
(Also look at web sites to find the info for this no-budget
upgrade)

>a bit larger, so that an optimization for 10-12 functions can be performed.

In the very first comment I had on this subject, I referred to a recent
result in copmputer science: Structured programs have limited tree width,
and further (practically) all program analysis can be done in linear time,
and specifically eliminating of most dead code.

With this result in hand, it is not unfeasible to look at your program
including libraries as one big program, and perform global optimizations
on that, including the vprintf, sprintf, fprintf, etc.
In other words, when we say "#include stdio.h", we do that, and bring in
"stdio.c" at the same time.

Advances in algorithms has outplayed the common structure on compiler/linker,
when we are talking static programs. However, in real life, dynamic linking
is still the answer, but as argued, dynamic linking is a no go for the c64.

I still argue that this is feasible. Especially with a target like the c64,
which has bounded size of programs: 64k.

You are probably correct as I don't think any of the 8-bit browsers can
do MIME. But is you are using a PC or other higher platform to read the
news, MIME is much easier. I would suspect that most of us reading this
newsgroup also have PC's, Amiga's, Mac's or ST's to work with, along
with using the 8-bit.

Hey, guys, I have all four emulators, and I can state that not all work with all programs. But it gets more complicated. I see specific complaints here about some emulators not running some programs, and the same emulators do on my machine. I also see raves about how some programs run on some emulators and I can't get the combination to run on my system.

This emulator stuff is turning out to be as "iffy" as anything can get.

But, I continue to applaud the efforts. You never know what somebody who's developing one might run into that would take him/her away from the task. You also never know what kinds of things somebody can run into that prevent or slow down further development.

Have patience. We should have much better emulators from all four sources (and who knows who else?) by the end of this year. Or next year. Or ...

Or, try using a real 8-bit!

Actually, the Gorgon's shots did no damage at all. Instead, they caused the opponent to move progressively slower (the Gorgon, in classical mythology, turns its victims to stone). After a certain number of shots the enemy becomes a statue and dies instantly. If I recall correctly the slowness persists across combats, and can only be removed by casting Heal on the affected piece.

Gorgons are really evil because each hit makes it harder and harder for the opponent to fight. The gorgon's shots move very quickly and are hard enough to dodge in the first place. Gorgon vs. a slow piece is almost like a guaranteed win for the gorgon. A pair of gorgon attacks on an enemy Adept, if the Adept doesn't get healed after the first, will take the Adept down and leave you with a gorgon.

But they would be accurate representations of the original work.
Replace TIFF with GIF, MPEG or PICT etc. you end up at the same point,
replace it with TeX and you do to.

The question, and my premise, is do you want to simply duplicate the
book exactly in electronic form? If so I'll argue Quark over TeX any
day. If you, like myself, agree that this is not the point of electronic
distribution, then let's not even try.

> All the standard tools for working with TeX and LaTeX are free.

And on many machines unavailable, expensive or poor quality.

If it's unavailable, install it.
If it's expensive, get a free distribution.
If it's of pook quality, it's probably been modified.

: > is needed to edit TeX or LaTeX is a text editor, just like HTML.

: And it's suitable only for a professional. Sorry, did someone miss the
: GUI Revolution?

GUIs can be nice for some things, I'll admit that. _Short_ document
preparation is one of them. For example, before I learned TeX, I used M$
Word for preparing papers. It was nice. Not great, but it worked. TeX
is great in general. Nothing's perfect (Except Atari 8bits! :) but TeX
comes close.

: > PDF cannot be easily edited natively without expensive commercial software
: > (Adobe Acrobat), as far as I know.

: Whereas TeX can only be edited by expensive commertial users.

You mean you have to buy expensive programs like EDIT.COM to edit TeX?
This is news.

: We're talking read-only here.

Not at all. .tex files are purely ASCII.

: > I agree in essence here. Hypertext is cool and sometimes even useful.
: > It's just that HTML as such does not usually produce really nice hard copy.

: So? Is that what we even WANT? If you want the book, buy it, I see it

But this lets us print it out for free, and free is good. And
actually, I'd like to see it available to be printed, because that's much
easier to use than a remote HTTP server when you're writing a program and
need to find out some address.

Yup, apparently so by all the responses I've seen. I never
knew about the slowing down (because, uh, the dog ate my manual...)
But regardless, instant death in 2-3 hits was just too cool.

>> Also the obstacles in the air zone would deflect projectiles
>>fired into them, creating a pinball effect.

The original Archon obstacles didn't do that to my memory.
There was basically one type of obstacle with three states of existence,
there, kinda there, and not there. =^) When there, it stopped anything
(projectiles stopped, creatures were bounced back, or if you hit it
just right, bounced "around" it) When kinda there, it slowed anything
passing through it. When not there... you figure it out. =^)

> What is the value of the pots used in an IBM joystick?

I'm not sure what the ohm value is of an Atari paddle (can tear one apart
when I get home) but I can answer the question above.

The IBM analog joystick was compatible with the Tandy Color Computer
joystick with the exception of the plug itself, and both pots in the
joysticks were 100K ohm. I can provide the pin-outs to the Tandy Color
Computer Joysticks if necessary (regular or Deluxe... the regular
joysticks were kinda cheezy, but the Deluxe is a very nice joystick...
still use mine!)

Any other questions? Feel free to ask!

I am no longer able to run any version of the PC XFormer since I installed my new controller card. After about 2-5 minutes my system locks up and the screen either turns black or black with vertical colored stripes which are the same color as whatever the main color on the emulator screen at that time was. The only thing I've changed in my system is that I've added a new Promise 2300+ EIDE controller card which has it's own bios. Does this sound familiar to anyone? Has anyone else run into this problem or think it may be caused by something else? Any fixes. Any help would be greatly appreciated.

Sincerely,
- Byron Followell

P.S. - I'm running from win95 dos mode but I used to have no problem there either. Also, I'm running ver.3.5, but other versions lock up too.

While attacking, nothing can hurt the juggernaut- I use this to jump
across fire without getting hurt and making a lunge for your opponent
out of nowhere. by the same respect, the juggernaut is least effecient
fighting on the earth plane because you cannot pass through the stones
and usually don't have a straight shot... use the siren here.

I like gorgon-vs-gorgon fighting in the void... Better have a quallity
joystick or two cause that takes some manual dexterity...

> > Also the obstacles in the air zone would deflect projectiles
> >fired into them, creating a pinball effect.

Does anyone play by making a "wedge" that is starting by moving your
Adepts on a corner of each element (so you are always on a power-dot)
then summoning a creature to the adjacent corner in each elemant (so
they are always on a power-dot...) Remember, the more power-dots you
occupy the faster your energy grows... After setting up my wedge I
would always go for one element (usually fire) and lastly take the
voids... Won many a game like that.

> least), was that a real game or just a hack?

Yes. ARCHON III [EXCITER] was a real game release from free fall- the guys
who programmed I & II and as far as I know it was only released on the c64.
If anyone wants it (the c64 version) to play on an emulator or maybe you
have a c64.?. Email me and I will send it... I would also like to get
ahold of I & II for the IBM.
Btw, don't expect too much of archon iii, as memory serves, it sucked...

I always wanted to hack I and II and put a modem driver in it so two
players could compete over the phone but I fear on the c64 modem speeds
are too slow for proper reaction and I don't know how to program any
other platforms... Besides, I couldn't figure out how to keep the sides
synchronised and if one was even slightly off timing or placement the
whole game play would be useless... Still, nice dream...

Late,
RadWar

The custom chips are mapped differently into memory on the 5200; you
have to get a dump of the program, disassemble, and re-ssemble having
swapped the labels around.

Yeah, it's a pain! Strobe the four PIA lines and monitor the STRIG and
POT lines. It's gotta be done slowly to get accurate reads.

> matter where your opponent was.. I also believe it healed itself that way
> also.. Nasty critter

no, no.. You are thinking of the Wrath... The siren "screamed" but the wrath
was invisable untill attack and had to be close to opponents to "drain" energy-
cool cause all the energy drained from your opponent is added to yours!
This was hands down, my favorite in two-player... But against the computer
the wrath is useless...

> The first two hits actually did *no* damage.. instead each one slowed the
> opponent down.. I guess to simulate him "turning to stone" .. the third
> one finished the job. Problem was it was an all-or-nothing affair.. if

> as new in the next fight..

I thought the gorgon hits were cumulative, that is two hits with one gorgon
then just one remaining hit with another gorgon and that's all she wrote...
Now, if you follow up with some other character, then the opponent had full
strenght but I thing was slower than normal- still one hit won't do it here...

My first computer was an 800XL. I later picked up a 600XL. If I remember correctly the only difference that really mattered between the two was the larger RAM on my 800XL.

That being said, IMHO the 600XL's were fitted with much better keyboards. In fact, I knew a lot of people in my old user group that picked up second hand 600XL's just to fit their 800XL's with the 600XL's keyboard

Funny you should ask! I just bought one a couple of weeks ago at B&C Computervisions at 408-986-9960. It's a board with 3 SIO sockets. Use one to connect to the computer, another for the modem or printer interface, then the 3rd for your first disk drive or whatever you want first in your chain. The remaining printer interface or modem can go on the end. The board is actually built with points on the 4th side that could be used to connect half an SIO cable so then the board could be placed in a little box and directly connected to the computer with 3 outlets.
CSS had a box they caused the "Quintopus" or something like that with multiple outlets.
Both have an option for extra money that applies extra power to the line. This is good for 1200XL owners who haven't modified their computers. The stock 1200XL doesn't provide power to printer interfaces and modems and anything else that depends on getting its power from the computer.
Hope this helps...

PC Xformer is incompatible with Atari Software .. why wouldn't
it be incompatible with a Promise 2300+ Eide card. FYI, I'm
running the same I/O card under both Win 3.1 and Win95 (mostly 95).
The card is fantastic! Wish I could say the same for the software!

But a TeX or LaTeX format manual would be easy to print out, and look
pretty. I HATE printing HTML docs. They look lousy on paper. And
my copy of Mapping the Atari was lost in 1990 (along with all my copies
of Compute!), so I want a copy!

I'm pretty sure that NTSC composite video has 320 color clocks per line (or more with overscan). My understanding of the cause of artifacting is interference between the chroma and luma (color and intensity) portions of the video signal. This is born out by my experience with split NTSC video (chroma/luma, not RGB)--- I really don't get any artifacting on my system, which has been set up for split video. This is also why you don't see artifacting on RGB displays.

It'd be easier to run 5200 soft on an emulator than on a real 8-bit.
You can't remap GTIA, POKEY and ANTIC inside a real 8-bit; you've got to
fix the software.

My hunch is that "Glenn the 5200 man" worked at Atari, "borrowed" source
code and changed the OS equates. Rip out the joystick handler and
you're set.

2917. Atari 8-bit stuff for sale/trade

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-10 00:00:00 UTC
From: Tony Ramos <ramos.15@osu.edu>
Message-ID: <325D7AB5.53D8@osu.edu>
Source record: 79644

I'm emptying out my closet and have some Atari 8-bit items
for sale and/or trade:

Atari 800XL, unmodified, with power supply $25

Atari 1050 disk drive, unmodified, w/power supply & SIO cable $30

Star SG-10 dot matrix printer, no cover but like new $45

OSS MAC/65 cartridge, with manual $15

ICD R-Time 8 clock cartridge, with software disk & manual $10

ICD P: R: Connection, dead, with printer and modem cables $10

Stuff I'm looking for in trade:

one of those cables with a chip inside that connects the 8-bit
directly to an RS-232 modem

a set of Atari wireless remote control joysticks

All prices are negotiable but do not include shipping.

-Tony

>64K which the emulators I understand don't emulate correctly.

Wow, I guess I'm not the only one.. But I did learn something here..
Yogi is right.. it is a timing problem.. If you are using a pc ..
check out rainbow for win 95... This seems to emulate the disk i/o
timing.. Programs take just as long to load as they used to...
Karateka works!!!!! and some other programs seem to work better
(better colors.. ect).. I hope they include sound support with the
full pc release.. It looks like this could be the best emulator yet!!

Thanks for all your responses.

The first time a friend of mine saw Ballblazer, he said "Get your other joystick Dave. I'm going to kick your ass!" Needless to say, the guy recognizes a fun game instantly. He was a Commodore fan in his youth and he also had this to say :"The sound kinda sucks and the resolution is really strange (the game runs in a GTIA mode) but everything moves and animates so much better on this games. It's so smooth!"

Here is the pinout of the ports on an 800/XL/XE. The 2600 controllers
are compatible with the computer line so this information should be
valid for the 2600 as well. Remember, I am giving the pinout of the
PORT so the pinout on the controller plug will be reversed right to
left.

1 2 3 4 5
6 7 8 9

1. Stick Forward
2. Stick Back
3. Stick Left
4. Stick Right
5. Potentiometer B input
6. Trigger
7. +5V
8. GND
9. Potentiometer A input

I have some questions of my own:

What are the value of the pots used in the paddle controllers?

Do the axes of a 5200 analog stick map to the potentiometer inputs of
the standard 8-bit jack? How would one read a 5200 keypad on the
8-bit computer?

Has anyone ever figured out how to read the keypad that comes with
the 2600 Star Raiders game on the 8-bit?

What is the value of the pots used in an IBM joystick?

Which brings up the following interesting question:

Since the 5200 was basically a stripped down 8-bit computer, how big a
deal is it to get the 5200 OS running on an 8-bit and what would one
have to do to make a 5200 cart (the PROM anyway) work on an 800/XL/XE?

I dont remember either, but I do remember that once it's in the charge mode, it can't change direction unless you abort the attack by releasing the button.

> The Gorgon had a unique missile attack, the first one or two
>hits did minimal damage, the next caused instant death no matter how

Didn't the Gorgon's hits progressively reduce the speed of the opponent, or is that a different creature?

> Also the obstacles in the air zone would deflect projectiles
>fired into them, creating a pinball effect.

As I recall (at least in Archon I), certain obstacles would deflect projectiles, but some would only slow them down (having the same effect on the players also if you came into contact with them).....is there a way to distinguish between the different obstacles?

>>ObAtari: Anyone remember an Archon-like game from Antic magazine? I

>best, my cousins had a 1200xl, but they weren't much into computers.

I seem to remember talk of an Archon III (amongst people with C64s, at least), was that a real game or just a hack?

It's a big deal. The 5200 has some of its paged IO at different
locations. Also the 5200 never had proper joysticks but analogue ones
(essentially 2 paddles at 90 degress). So quite a lot of technical
know-how is needed.

: Unlimited range. Unicorn/Basilisk(sp?) ruled!

Yep.. I once played the computer on the C64 and took out the entire light side with a basilisk without even getting HIT once.. No wonder my friends didn't want to play me at that game.. (that, and we tore up soooo many joysticks with it.. Most sticks just couldn't take the frantic directional changes that game required.. Wico ones did, but that's it)

: Juggernaut. I don't remmeber if it could be hit while
: in attack (but I wouldn't be surprised if it could)

I don't think so.. but it was a sitting duck when it stopped at the edge of thew screen (or obstacle)

: >Invisible: How did this work? Am I remembering it right?

: One of the demons had this, I don't recall what it was called
: (looked like an old bearded guy). You'd reappear whenever you fired a
: shot or tried to run through a penetrable obstacle.

That was the siren.. Invisible till you screamed, which did damage no matter where your opponent was.. I also believe it healed itself that way also.. Nasty critter

: >Cruise Missler: (I might be making this up) Was there one that fired
: > a missle that the player then controlled, with the
: > player frozen til the missle exploded?

: The Adepts had these. While you could control your attack, it
: was a bit of a challenge. slight turns weren't a problem, but any

The computer was damn good with 'em though.. The only way I could wipe the cpu's adepts out was to get them on the earth level and ambush them around obstacles..

: The Gorgon had a unique missile attack, the first one or two
: hits did minimal damage, the next caused instant death no matter how
: much strength the victim had. My ArchonII demon of choice. >=^)

The first two hits actually did *no* damage.. instead each one slowed the opponent down.. I guess to simulate him "turning to stone" .. the third one finished the job. Problem was it was an all-or-nothing affair.. if you got two shots in then your gorgon got whacked, the other guy was good as new in the next fight..

: The Chimera(?) had three attacks, fire(?)bolt, fireball, and
: tail sting. the first two were projectiles, the third was a melee

: strike (like the knight/goblin). Your attacks cycled through the
: three. (so often I'd use the first two, then waste the sting =^)

Neat idea (the chimera's 3 weapons) but I never found much use for this guy.. He wasn't nearly worth the magic needed to summon and maintain him.

Archon definitly ruled.. too bad PC Archon Ultra was a waste...

Has anyone else seen the "HIP" 30-shade high resolution (160x192) graphics mode? It's pretty incredible! It seems to blend a 16-shade (80x192) mode with higher res. "on top of it" (using interlaced page-flipping, just like the ColorView modes do to get 8, 64 and 4096 RGB colors).

There's a demo at some FTP site (Taquarts?) called "HIP16TRO.COM" which shows an example with some Giger painting.

Cool cool cool!

Well, not really, but XFormer 4.0 is now available as a free upgrade to registered users of 3.x. You have to send back your original disk (or the CD-ROM liner if you bought 3.5 on the Gemulator Gold disk) together with a self-addressed disk mailer. There are also new versions of Gemulator, including one that runs with, and optionally may include, MagiC. Also, Emulators, Inc. states that they are working on a Mac emulator for the ST that they will call Recycle. I got the flyers today. I haven't checked their web page to see if it was also updated with this info. But I wonder if having already downloaded an upgrade to a purchased 3.x takes you out of the free 4.0.

I guess I'm about to find out.

Lets keep the discussion going, hopefully without rancor. If this version of XFormer is significantly better than the 3.x's, it will offer something of a challenge to those who are developing their own emulators. Or, maybe it's the other way around, and the other guys' advances pushed Mihocka to bring this one out. At any rate, I hope development continues to come from all sides. And remember -- I'm not a gamer, so I look to see what the emulators do in the area of screen displays in applications, how well the OS, BASIC and other languages are supported, printer and modem support, etc. You guys can fill in about which games specific emulators will or won't run.

2937. Xformer Sound - Major Problem

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-11 00:00:00 UTC
From: "Tronix Inc. (Joe)" <tronix2@worldnet.att.net>
Message-ID: <325EE32D.7693@worldnet.att.net>
Source record: 79573

Since I know I won't get any fast enough feedback from "Branch not-Always Software", I'm hoping someone who's experiencing similar problems can many answer this:

I purchased the commercial emulator of Xformer 3.5 the other day, since I was dabbling with all the emulators and finally figured I can get both Joystick and sound support with the Xformer. All the other emulators are still missing at least one of those components (though they all are good in their own way).

Anyway, joystick support works, but the sound-support is absolutely a disaster. I'm using a SoundBlaster Awe-32, and once I launch any game, it shoots all kinds of weird sounds that don't even come close to emulating Atari sound effects. I didn't expect any pokey-perfect sound, but this is the equivilent of a grade-school class let loose on a bunch of instruments on the first day of music class. Problems include: tones that are all completely off, ear-killing hi-pitch sounds, and when exiting any game, the last sound effect hangs. I actually have to shut down the PC to clear out the screwy sound that's retained in the sound card. I haven't had one game work correctly with sound yet. All my Sound Blaster settings are correct - and I never had any sound problems with any PC games of course. I just expected some decent sound effects, nothing like the original, but at least a bit close. This is horrifying. If anyone has any answers, I'd highly appreciate it (either e-mail or here) - being a major Atari 800 fan from way back when. :-)

Joe

Is anyone interested in the original artwork that we at
O.S.S. used to produce our last major 8-bit ad campaign?
In our ads for BASIC XE, we had a "turbo-charged" 130XE
pictured. That is, the 130XE has "hot-rod" exhaust pipes
and the intake ports of a souped up carbouretor.

The 130XE is beautifully depicted, though there are no
labels on the keys. The painting appears to be partly
hand painted acrylics and partly airbrush.

There is a scratch on the paper surface that is visible
close up but not from normal viewing distance.

This isn't the same kind of "history" as a 1450XLD or
the like, but I thought I would see if there is any
interest out there in something like this.

The ads using this painting appeared in several magazines;
I think in late 1985 through 1986.

The original artwork cost us about $700 when we had it
done. It is now matted and framed (although in an
inexpensive frame).

If you have any interest in this and want to make a
serious offer for it (yes, you would have right of
inspection and/or I can send a color xerox of it before
sale), please email me. What's a "serious" offer?
I dunno. More than $20, for sure. But I sure don't
expect thousands for it. Surprise me.

Source record: 79578

And while we're looking at selling things...

How about the plexiglass "logo" from a BattleZone game? (Arcade game, pre-the breakup of Atari.)

The plexiglass is about 5" by 15" and has the word "BATTLEZONE" in red letters, the front of the tank with its gun firing, some background mountains, stars et al. in the sky, and a grey (small) Atari logo. The actual painted area is about 1/2 " smaller all the way around to allow for mounting. (The painting is on the back, of course.)

There are six mounting holes in the plexiglass.

It's in very good, but not perfect, condition. A few small scratches in the paint. A minor roughness on the front of the plexiglass (that could be smoothed by a plastics polisher).

I always meant to mount this in a box with a light behind the painting. I haven't yet got around to it.

For the right price, you can do the mounting and save me the effort. What's the right price? I don't really know, so surprise me with an offer.

>you're set.

It might very well be worth out while to create new 5200 games just by
porting 8-bit games. If we have the source code, as we do in many ANTIC
and ANALOG games, we're set, though the authors would have to be either
contacted or pissed.

What differences between 5200 Moon Patrol and 8-bit Moon Patrol exist? I
have 8-bit Moon Patrol. In fact, what other differences exist between
8-bit and 5200 games other than joystick control?

And where is the alleged 5200 Tempest?

Yes he did convert MANY 5200 carts, and NO he did not work for atari!
In fact, I was good friends with him many years ago, and he lives here
in British Columbia, Canada! It's been years since I've seen him, and
the last time I did, he long out of the computing feild..

He worked exclusively on a hacked 130XE with millions of wires, boxes,
and stuff hanging out of every port on his computer, and he NEVER had a
case on his computer :) Man those were the days!

I have just picked one of these up, and I can control a second 360K DSDD drive mech with the 34pin connector as a second drive! The beast reminds me of those old apple II drive too much :)

One chip 1489 version?? I was wondering if you are talking about an equivalent to the SIO2PC. I have built a two chip version with the ICL-232 and 74LS368 chips in it. I have also have plans for a one chip version which uses only the ICL-232 or MAX-232 and a few misc parts. I believe there were several variations on both of these.

My real question is which is the best one and will one version work reliably with all the different types and versions of software (i.e. SIO2PS, APE, etc...). Soldering or locating parts is not a problem for me, just would hate to need 2 or 3 separate versions for different software!

Take care, Jon

Making a list of whick games work and don't work with each emulator may not be a big help here. Most of the noted games are hacks. Many of the games do illegal hardware calls or use areas of memory which were considered reserved by Atari.

Since there are many hacks of individual games, each hack may or may not work on a particular emulator. There may also be some difference with the PC you are using and how it is configured. As you said, this emulation thing is really "iffy". I know that PCXformer was "originally" designed to conform to Atari's programming standards. This means if you wanted to run DOS 2.0s or 2.5, and program in Atari Basic, it is great. Hopefully, version 4.0 is more compatible.

Rob Funk (rfunk@magnus.acs.ohio-state.edu) wrote:

: OK, then how about Linuxdoc-SGML?

: It's a system closely related to both LaTeX and HTML (HTML is an
: "instance" of SGML, or something like that -- SGML terminology is
: weird), originally intended for the Linux Documentation Project. From
: a single source file that looks like HTML, you can create HTML,
: postscript, plain text, and other formats. It would be perfect for
: this sort of thing.
: And yes, it handles hyperlinks.

Looked at it, and even printed out the qwertz (the basis for Linuxdoc-SGML)
manual. Looks nice, but I don't know if it would really be perfect---
my impression (correct me if I'm wrong) is that it's a little too
high-level to do a reasonable facsimile of the layout of MTA.

On the other hand, I am really impressed with the hyperTeX macro package.
I think doing a TeX markup of MTA simultaneously with an HTML markup would
be the approach most likely to produce excellent results. That way, we're
not bound to the formatting limitations of Linuxdoc-SGML but can still
incorporate the "hyperstructure" that the HTML guys implement as hyperTeX
commands, so the typeset document can be made available as pdf as well as
dvi, postscript, and TeX source.

: I wonder if TeX and LaTeX could be ported to the Atari.... ;-)

Well, start working on web26502... heheh :)

I'm having a little trouble with my 130XE. I am using a one-chip SIO2PC box and my 486 machine to fileserve the 8-bit. I can load DOS, demos, and games just fine. I can't format disk images or save files to already formatted disk images. Anytime I attempt to write to a disk image I get ERROR 163. I used to be able to do writes and the interface box appears to be wired correctly (I am an electronics tech and did a fair amount of troubleshooting on it. However I may have missed something and will appreciate good suggestions regarding the hardware of the interface). Is my PIA or POKEY chip fried? Hellllllpppp!!!!

>voids... Won many a game like that.

Pretty much the same thing I did. Usually I sent the Earth
Adept into the Void or summoned a Gorgon and let it step in there.
(somehow I always thought of the Earth zone as useless. *shrug*)
Filled the rest of the corners of my side with adepts and Gorgons,
or some lesser elemental if I didn't have the power yet.
When the CPU summoned anything, I sent the Gorgon over to
un-summon it. =^) Especially if it moved a piece into the Void.
Let my power skyrocket through the roof then cast Apocalypse. At
this point my power was so high (and the CPU so low) you could walk
away from the fight to grab a drink, come back, then slaughter the
CPU.

Then there's something I'm sure we've always tried, Sent
your adepts over and win the game in four moves. =^)

Try SIO-2-PC or its later sibling APE. Hook a PC into the SIO chain.
Much cheaper than an 8-bit hard drive system.

What SIO2PC program are you using? If you are using APE, you need to register it for all the proper SIO write commands to work.

-get 100% 8-Bit games that work 100% on the emulators! =) right?
-
-Will

Todays techniques=same as yesterdays techniques

At least for me. Since I lost ALL my software, and had to restart the archive, I've had to re-crack at least 200 titles.

They still don't work right. Its the way the game was programmed, they squeezed every ounce out of the machines, and the tricks/shortcuts they used arent emulated properly. (Mainly timing/interaction of the custom chips.)

I dont think you could rewrite the non working ones without cheating and "stepping outside" the normal 8 bit parameters. They certainly would have done so when the game was originally written, as writing things that depend on timing like that are *HELL* to debug

I don't think he worked at Atari, but he must have been in contact
with someone there. My disk copy of Jr. Pac-Man (an unreleased prototype
game) has the caption

"Glenn the 5200 man presents Jr. Pac-Man. Another buried cartridge due
to the mismanagement of Atari!". It then adds "This treasure dug up by
Gary, Mickey Mouse thanks for info".

My current view on this, after reading all of the discussion, is, why limit our selves to only one format? Produce it in as many formats as possible. HTML for hyperviewing, TeX for book republishing, Winword or similar for those that want to simply print it out and ATASCII for those that have only 8-bit systems. Personnally, I probably use all but the TeX version, but that's just me. Any way you look at it, it should be scanned in and made available. That goes with all Atari 8-bit texts. Well, there's my $0.02.

I also have a Promise 2300+ EIDE installed on my system. I never had
a problem running Xformer.
If I were you, I'd check to see if all the cards are tight in the slot.
Is your CPU overclocked by chance?
Also make sure that there are no I/O or IRQ conflicts between your cards.

: Janice in NYC wrote:
: >
: > I seem to remember talk of an Archon III (amongst people with C64s, at
: > least), was that a real game or just a hack?

: Yes. ARCHON III [EXCITER] was a real game release from free fall- the guys
: who programmed I & II and as far as I know it was only released on the c64.
: If anyone wants it (the c64 version) to play on an emulator or maybe you
: have a c64.?. Email me and I will send it... I would also like to get
: ahold of I & II for the IBM.
: Btw, don't expect too much of archon iii, as memory serves, it sucked...

I downloaded C-64s and an Archon pack just for this. I really can't
believe this is a "real game release" from freefall-- it's gotta either be
some wannabe who ripped off their title screen, or a joke from freefall- i
didn't play it much but it definately felt like a parody of Archon II,
with a pseudo-appocolypse thng at the end. As a game it's just too lame,
with every character having a goofy banshee-like attack. The main game
board has the pieces moving in tiny increments instead of squares, and the
characters are obviously jokes, looking like boozy demons.

I'd like to know more about its history though...

i have an interview with the creators of archon + archon ii on my
homepage, http://www.tiac.net/users/kisrael in the video games
section.... (my URL will soon be "www.alienbill.com" as soon as I
secure the name and get the virtual webhosting up :-)

Dunno. They work fine on mine. In fact, I prefer .ATRs for the sake of
uniformity since I use SIO2PC to do a lot of disk duplicating for a user
group newsletter.

: no, no.. You are thinking of the Wrath... The siren "screamed" but the wrath
: was invisable untill attack and had to be close to opponents to "drain" energy-

Yep... my bad.. Just think if they would've made the siren invisible..
tuff to beat fer sure!

: I thought the gorgon hits were cumulative, that is two hits with one gorgon
: then just one remaining hit with another gorgon and that's all she wrote...
: Now, if you follow up with some other character, then the opponent had full
: strenght but I thing was slower than normal- still one hit won't do it here...

That could be.. I never noticed because I almost always finished the job
the first time :)

There was one slight problem with Gorgons though.. their shots seemed to
be a bit faster than the basilisk shots from Archon 1, and sometimes a
properly aimed shot would go right thru the enemy.. if they were moving
towards the bullet, sometimes they'd slip right past the shot sprite
between screen refreshes... Not often, but occasionally...

-I don't think he worked at Atari, but he must have been in contact
-with someone there. My disk copy of Jr. Pac-Man (an unreleased
prototype
-game) has the caption
-
-"Glenn the 5200 man presents Jr. Pac-Man. Another buried cartridge
due
-to the mismanagement of Atari!". It then adds "This treasure dug up
by
-Gary, Mickey Mouse thanks for info".
-
No, he didnt, I believe he worked for a branch of the government in
the DoD.
Since there has long persisted a rumor that parts of the Tempest
arcade code are used by the DoD in some kind of training thing (the AI
routines) its entirely possible that certain programmers at Atari and
certain programmer at the DoD made contacts.
The other thing to recall is that people that got prototype 5200 games
could very well have sent them to glenn for the conversions.
A lot of protos went home with employee's for their kids to test. If
the kid was unscrupulous (I sure was!) its very probable this is the
most likely way.

: more info.

Probably Archon Ultra. *Not* worth $50, maybe $15-- look around it's old
and I don't that much of a hit. Do a websearch on it for some reviews.

It was actually not a terrible idea-- give Archon a battlechess look,
and add lots of yummy details to the battle scenes, add some depth to
the cycles of light/dark, and give each warrior two weapons instead
of one. My main problem was that the combat was *way* too slow,
losing that critical fast action seat-of-your-pants feel. Plus, it's
a pain trying to find PCs with two joystick ports, and most PC joystics
are bad for that kind of game...

Hopefully this weekend I'm going to get started on the multijoy adapter,
six atari or genesis style controllers on one pc. See my homepage
for more information, I downloaded the plans and games from Germany...

Well, the 5200 version of Centipede looks a lot better (truer to the arcade version) than the regular 8-bit, for example it doesn't use the regular 8-bit character set for the scores up top (I'm assuming that that's because the 5200 didn't have a standard character set, did it?), the mushrooms and centipede are bigger and slightly more detailed in the 52 version, the spider doesn't look like a box with whiskers like the 8-bit, and the controls seem slightly smoother. Subtle differences, to be sure, but the overall effect is that it looks and plays better than the 8-bit Centipede.

On a similar note, has anybody played 8-bit Millipede? It's in Yogi's archives, but unforutnately the file is corrupted......

>And where is the alleged 5200 Tempest?

Did Atari ever produce the 8-bit Battlezone? I remember them demonstrating it at some show a couple of years back, but I haven't seen it in the archives or even for sale at the places I've seen......

Wasn't this created for the 5200? Hasn't anyone tried to port it to the
8-bit?

I remember seeing it on the C64. It was on disk, with Frogger.

Wrong-o. It can be used against a computer-controlled wraith (I guess it
was "Wraith", not "wrath", and against the slow "earth" characters. One
can totally avoid hits and collect _lots_ of energy. And with lots of
energy, a Wraith easily beats a computer-controlled Adept.

Yes, I have it. It's the Atari XE cartridge style, copyright 1987,
RX8077

Atari did release a Battlezone 8-bit cart; at least, it made it as far
as magazine reviews. Don't know how scare the real carts are. Andrew
Krieg, what can ya tell us?

Atari Classics is an 8-bit magazine started by Ben Poehland and picked up by a couple of 8-bit guys in California. It comes out every 3 or 4 months, whenever the publishers feel it is "ready". It has been around 32-36 pages and shows moments of greatness. If anyone out there has a yen to write an article for the Atari 8-bit community, give that rwoolley@pbell.net a holler. Otherwise, it will degenerate into a bunch of techie-hardware hacks.....

Yes, that's another game that differs noticeably from the 8-bit
version, I only took a quick glance at the Space Invaders, but as I
remember, the invaders in the 5200 version look bigger and more
detailed, and plus there are 4 shields between the invaders and your
ship (the shields get worn out as it gets shot), which I think the
8-bit version doesn't have......

Atari had been planning to release it for a long time but for some
reason it took them years to finally get it on (bank-switched?)
cartridge. Other than the very long delay, I haven't heard much about
the game except that it played very well (but those were just reports
from the show where it was demonstrated). At the very least I'd
expect it to use Gr. 8 mode for higher resolution......

Yup I've got the XEGS Battlezone cart. Pretty good. Yogi's got possession
of it at the moment, trying to dump it to a file.

Forgive this late entry, but I've been "out of the loop" for a while due to having to finally, completely, forcibly migrate off Portal (which went out of the ISP business altogether on 9/30/96) and relearn new-and-unfamiliar newsreading tools on this new account. But I'm Back Now. :-)

I just want to say that it disturbs me to see Atari 8-bit folks seriously discussing making an electronic version of an Atari-8-bit-specific book -- in formats that the Atari 8-bit can't be used to READ. Did I miss a philosophical/logical disconnection here somewhere in the last couple of weeks?

To make it clear: .atr files work !! Most of my images are in .atr
format.
But your problem could be that you like writting in BIG letters
and 0.15 only recognizes ".atr" but not ".ATR".
That's fixed in 0.16.

Bye,
Markus

Did you ever try to build a directory tree (with SpartaDOS MENU
for example) for a SIO disk (19200 baud), where you had stored
about 10000 files?

I have tried it. And nobody can tell me, that the SIO2PC-like
connections are better than a hard drive (although it is really a bit
more expensive).

From: Tim Johnson <tbyte@juno.com>
Message-ID: <32611F7F.2F3C@juno.com>
Source record: 79525

I bought a full XEGS setup at a thrift store for about $5. Gun, system, 1050 disk drive, and 1030 modem (which I have no power supply for). I also bought Blue Max, Flight Simulator, and Galaxian for it. But that's off the subject. With it was a strange box called the "Graphix AT". It is a black box manufactured by a company called "xetec". It has a cable coming out of it that ends in a standard Atari 8-bit connector. At the bottom of the box (the box is sized/shaped like a cartridge of some sort) is a male parallel port connector (that's what it looks like). On the box itself is a set of 8 switches.

What in the world is this? Is it of any use to anyone?

> >--

A new 9o's version of Ballblazer is scheduled to be released soon for the
Sony Playstation.

Based on the screenshots, it appeared very similar to the old Atari 8-bit
version -- rotofoils, goals, and the ball were all in the field of view,
but the graphics were spectacular compared to the 8-bit classic.

As far as two-player games go, I rank Ballblazer in the same league as
Mule, Archon 1 and Archon 2, and Dandy (the precursor to Gauntlet,
released by APX -- you could even play four player Dandy on an Atari 8oo).

Well, that's enough reminiscing for one day....

>Take care, Jon

I use a one chip 7400 SIO2PC interface with my 486 machine. The one
chip version is supposed to be somewhat inferior to the other versions
but the one I built for 10 bucks in Shack parts works great with NO
software hassles. Most software has a menu option for one or two chip
sio2pc cable operation. I just built the one chip inverter version
and selected the appropriate menu and I was in business. Once the
cable is built and you have APE or SIO2PC software running the 8 bit
cannot distinguish it from a regular floppy drive. It is seamless,
fun and convienient. I wouldn't worry. Build the one chip version
and have some happy 8 bit computing!

It's a parallel printer interface for the 8-bit. The DIP switches let
you set the
type of printer and a variety of options (like line feeds, graphics
dumps, etc)

I've had one for about a decade of intermittent use, and never any
problems. I may still have the docs lying around as well, if you need a
copy.

Some Highlights
The titles listed below are all original, not copies.

Sublogic Flight Simulator, in box w/manual, everything!
The Home Accountant w/manual
Atari 810/1060 master diskette
Atari Dos 2.5
(I know the dos's are a big deal,but these are original)
Sublogic Pinball
OS/A+ (Version 2) with manual
Atariwriter with Atari Proofreader (XL Version)
Microprose F-15 Strike Eagle
Microprose Soloflight

Micro Painter.

Lots more, but I'm boring you already, I know (sigh)

4 Antic magazines

I know there is some stuff I am forgetting to include, but
if buy, believe me, you will get everything. Everything is
working except for that dead 1050 drive.

I am asking for $550 and that includes shipping.
Email any responses to:
ericcron@wwa.com

If you want to be answered quickly, copy that message to:

Eric_Cron@addus.com

I think that $550 is a fair price. Actually, I think that if
I were to sell piece by piece, I could get more.
(Bravo Sierra(While doing a great job supplying the Atari
community with hardware), wants close to $100 just for 1
810!,and I think he wants something like $80 for 1 850!)

I guess what I'm trying to say is that I don't want anybody
to ask me to lower my price. If nobody buys in a month or
so, I will put it all up for sale individually. Feel free to
email me and reserve something(with an offer). I will keep
a list and I will contact you if nobody buys everything.

cul8r,
Eric Cron
(A guy who is selling everything 8 bit so he can buy his
girlfriend a color scanner for use with Photoshop)
Oh well, I am just going to have to emulate.

3015. Fs: Atari 1050 disk drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-13 00:00:00 UTC
From: Barry Hom <bfhom@delphi.com>
Message-ID: <pJHxeIH.bfhom@delphi.com>
Source record: 79536

I have an Atari 1050 disk drive for sale. It includes the power supply,
cable, the manual, and the DOS 2.5 disk. I'm selling it for $30 + shipping.
If you're interested, please e-mail me at: bfhom@delphi.com.

Thanks for looking!

Barry hom

3016. ANTIC magazines for sale or trade

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-13 00:00:00 UTC
From: 6500dtpt@ucsbuxa.ucsb.edu
Message-ID: <53rgq9$1ld@ucsbuxa.ucsb.edu>
Source record: 79537

I have July 83, Sept 83, Oct 83, April 86, June 87.

Anybody want these?

Will sell or trade for something Atari or classic video game related
(even some common 2600 carts might do)
--

6500dtpt@ucsbuxa.ucsb.edu David Tipton

3017. Atari 800 & 1040ST systems for Sale !!!!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-13 00:00:00 UTC
From: Kevin Burkhardt <kb-1@ix.netcom.com>
Message-ID: <01bbb95e$fcd989c0$6dc5b8cd@p5-133>
Source record: 79538

These systems are still available. Below is a list of everything I have.
I will consider selling some components seperatly.
But would rather keep systems complete to sell as whole.
Both systems have been been kept in their original boxes.
Both were in good working order the last time I had them set up.

If interested, submit your offer or questions to:
Contact - Kevin at kb-1@ix.netcom.com

FOR SALE: ATARI 1040 ST - SYSTEM AND SOFTWARE !!!
ATARI 800 - SYSTEM AND SOFTWARE !!! (Listed Below)

Thank you for the information. I would "assume" the MAX/ICL-232 is more tolerant because of the chip design. That is the way I was planning to go until seeing the APE interface design. Being short on time, I was hoping someone else has routed through the variations.

Go with the 232 or 1489 versions. The 232 is the original, designed by
the creator of SIO2PC. The 1489 design is based on the tolerances
within manufacturing standards, and within the RS232 standard. I've
heard of no great problems either way.

> and have some happy 8 bit computing!

Thank you for the reply. I built a 2 chip version of the SIO2PC cable some time
ago but never did too much with it. I was told that the 2 chip version had
some type of problem with certain versions of software. So, I decided to build a new
one chip version to avoid possible problems. Well, after mentioning it to a few friends, I now need to build a half dozen them.

I was hoping that there was one design which was "best" for both SIO2PC and APE. I was going to order parts about a month ago but found out there many different designs of cables based on the 7400, MAX-232 or ICL-232, and on the LM1489 chip. The more I look, the more variations are found. There are even variations for each of the individual chips! Parts will only run about $10 or so, reguardless of which design I build.
So, I was hoping for the best and most compatible design, would hate to have to redo
6 or more of them!

3022. 65C02 code

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-13 00:00:00 UTC
From: ricortes@netmagic.net
Message-ID: <53rmt5$n0i@news.netmagic.net>
Source record: 79543

```
: sources for chips couldn't find an 65802 either. I never checked the
: 400 schematics, but it's possible they all have a 6502B.
: What I've noticed with the 65C02 is it allows you to write much
: shorter code, maybe 30% tighter, relative speed does not readily
: drop by 30% though because of addressing modes for things like
: block moves.
;Uhh, 65C02code is NOT 30% tighter.
;It's more like 5%. The only new instructions I can remember are:
Well, shouldn't be wasting the time, but what the hey!
STZ ADR => replaces LDA #0:STA ADR so depending on whether ADR is page
zero or not, it is 2 or 3 bytes respectively while the 6502 sequence is 4
or 5 bytes. In a real programming situation, you may even have to add
PHA/PLA to the 6502 to save the acumulator where as STZ doesn't affect the
registers=>2/6 or 3/7. BRA => replaces sequences like SEC BCS or 1 byte
vs 2 and once again, you don't have to worry about pushing/pulling
registers, even the status register if it happens you need it So for at
least the two instructions you can remember, they save up to 60%. Just
exactly what point was it you are trying to make???
;The Rockwell 65C02 has a few other ones like BBR and BBS, but those
;aren't in the Western Design Center 65C02.
The Rockwell chip is the only one my local store,
JDR, stocks. It has about 30 new op codes to the existing ~160, all of
which were designed to save code space. For instance, let's say you want
to use a page zero pointer, normally you'd do something like:
LDA VALUE
LDY #$00
STA (PZEROPTR),Y
With a 65C02 it becomes:
LDA VALUE
STA (PZEROPTR)
Ditto for just about everything else you do on an
Atari at least. For instance, you have to save any registers you use
during a DLI. With a 65C02 you have the PHX, PHY, PLX, PLY so everything
you do that uses the stack is shorter since:
PHA
PHX
PHY
<CODE SNIPPETS>
PLY
PLX
PLA
Replaces
PHA
TXA
```

```
PHA
TYA
PHA
<CODE SNIPPETS>
PLA
TAY
PLA
TAX
PLA
```
The Atari OS even uses jumps through the stack i.e.
```
<code to determine what>
<you want to do/branching>
LDA ADR+1
PHA
LDA ADR
RTS
```
On a 65C02, it can be as simple as
```
LDA TOKEN ;This is the token decoding
ASL A
TAX
JMP(JTABLE,X) ;This replaces the stack jump
```
;Toshi

Rigged demos for sure, but I think it illustrates my point.

What products/platforms did you code for?

Rick

>Cyrus

>cyrus.malek@amd.com

I paid $55 for my first 1702. To my great dismay, I found one for sale at a thrift shop for $13.00 a week and a half later. I bought it as well and it had a better picture and was in better condition than the first. Do those monitors really rate $65?

The most dismaying/amusing things of all are to be found at flea markets where people try to sell atari 400's for $35 and $800s (sometimes with a drive) for as much as $100!

Source record: 79613
Cross-posted to: comp.emulators.misc,comp.sys.atari.8bit

I'd like to announce that XL-it! 0.16 Atari 8-bit emulator
is available at:

http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html

New features:

o Better sound
o PC-Joystick support
o User Interface
o Speed-lock
o better modex-support

Bye,
Markus

Message-ID: <53phjt$eoa@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 79614

I, too, have an AWE-32 and get the same thing with XFormer. When I told Darek about it, he said that the emulator was designed for the old 8-bit Sound Blasters. I guess we're in the minority as far as sound cards go, so I don't really expect any improvement soon. (Shucks, I'm about to upgrade my AWE-32 with 8 megs of ram and a ton of new sounds, drivers, and a new Vienna, too!)

With XL-It, the samples that everyone says are so great sound very rough to me. I wonder if sampling them with an AWE-32 will improve the situation?

Rainbow '95 doesn't have sound yet, so no comment here.

POKEY's author seems to have the best solution. He's designed a card with a Pokey chip on it that plugs into the parallel port on the PC. You run a cable from that card into the Line In jack on your sound card. I won't use it because my PC tower is in a cabinet with tons of wiring behind it.

I'm going to order the 4.0 and see if that makes any improvements.

I don't know about TeX, but HTML is a plain ascii file format, and anyone
with access to the Web has the tools to convert an HTML file to more
readable form (I've only used Lynx, but I think other browsers are capable
of printing the text of an HTML document).

Yes, and its always a great idea to learn to solder :)

You can freely get complete plans for both the
APE 1489 and ProSystem 1489 interface at http://www.nacs.net/~classics

Steve

3030. Re: HTML version: Mapping the Atari

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-13 00:00:00 UTC
From: irata@aztec.asu.edu
Message-ID: <53pnvq$1ou@news.asu.edu>
Source record: 79618

Actually, the 8-bit "purists" have given up on arguing over ho
how the emu-heads do things. Sure, it would be nice if
everything pertaining to the 8-bits was 8-bit read only (anyone
for an ATASCII web page?), but there are some "givens" that we
need to put up with. But now we're getting suggestions
about using non-PC formats as well (at least I think TeX and
LaTeX are non-PC, I could be wrong, and quite frankly, I don't
care). Hey people! Let's stick to Atari/IBM conventions here.
We don't need any "weird" formats mucking up the process.

I vote for straightforward HTML code or straight ASCII text.
Let's keep a standard that allows the most people to access the
information. TeX, LaTeX, ClarisWorks, Timex-Sinclair, .WRI,
etc. just isn't gonna cut it.

> How about the plexiglass "logo" from a BattleZone game?

Bill,

Try the following newsgroups:
alt.games.video.classic
rec.games.video.arcade
rec.games.video.arcade.collecting

You'll have better luck there. Battlezone stuff comes up now
and then.

- Anthony

It came up fine for me. But then I use newsreadrs that have "live" URLs that I
just click on, MS INews and NewsXpress. It's possible it is a typing problem.
It'ss up on my browser now.

ABOUT BLOODY TIME!

I'll be sure to check it out. I used to do Atascii movies too, but I was about ten years old at the time and as such mine were very ripped-off and very infantile, though I have it on good authority that the graphics at least were decent.

I don't have them anymore, and I would be reluctant to release them if I did. To be honest, the only thing I still have for the 8-bit from before I was thirteen years old is an old broken 400 with no cartridge door, in my closet next to the Vic-20 with the joystick port removed.

Do they still have this, or are they out of business?

I suppose I'll be the first to venture to ask, also, what is the frame
rate, approximately? (You can probably get an exact count with a good VCR
and frame advance)

I'm sure in order to play those games on the 8-bit computers, Glenn would have to have fix it himself. Is this not the case? :)

Now that I'm interested, where's a good place to get them and which 5200 games are *better* than the 8-bit counterparts?

> have to do to make a 5200 cart (the PROM anyway) work on an 800/XL/XE?

Assuming that such a project would be possible to make and give sell by
some means...

It would require a way that not loads the 5200 OS somewhere in memory,
but also a program running on interupts that can translate the 5200
address calls to the native 8-bit computer's as well. You would also have
to be also to remap joystick and keyboard readings into the proper signals
of the 5200 controler that the game is expecting.

And unless you only want to use just disk images, have an interface plug
in between the 8-bit cart port and the 5200 cart itself.

Say, why not put all the programming and that in the thing as one single
cart thing? Heck, I bet with the VCS adapter you can play 2600 games as
well! :)

Has anybody here personally ever had any success copying carts? I tried it a couple of times with a Missile Command cart and using a cart copying program (forgot the name of it), but I've never gotten a successful copy, inserting the cart either locks up the computer or I end up with a file that doens't run (and that's with a regular 8K cart, I can imagine that trying to copy a bankswitched cart would be close to futile)......

I missed the NWPAC meeting.

Considering how few people were there last time I was there, I figured that maybe my not showing up could have caused NWPAC to disband, which would royally suck because I wouldn't get to show off that neat thing I did in ML.

Are my fears warranted?

3042. ATARI EQUIPMENT MUST SELL!!!!!!!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-14 00:00:00 UTC
From: admiral.nuguru@fantasy.com
Message-ID: <c5.5575.42@fantasy.com>
Source record: 79480

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $100.00 or best offer. These SELL AT Video 61 for $49.95 used.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them. Again, these sell, each $49.95 at Video 61, you're getting 2 for the price of one.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00. These sell at Video 61 for $74.95, same price.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package. These are not currently available anywhere else that I know of.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for $59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual, Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

ATARI RELATED MAGAZINES, Found this unopened box that I had boxed up for a person, but then he never sent the order in:

ATARI EXPLORER, February 1985, Cover Price $3.00
ATARI EXPLORER, April/May 1985, Cover Price $3.00
ATARI EXPLORER, Summer 1995, Cover Price $3.00, $3.95 Canadian
ATARI EXPLORER, Winter 1986, Cover Price $3/$3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Sept/Oct 1986, Cover Price $2.95 $3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Nov/Dec 1986, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Spring 1987, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Summer 1986, Cover Price $2.95 $3.95 In Canada

The Above Magazines are in good/fair confition. They are from the same collection the above 1027, 1050, are from, the previous owner suffered a stroke and asked me to dispose of these for him, as he has moved, and I am asking FAIR MARKET VALUE, as can be seen from the prices sent to me by Video 61, who seem to use the Internet and stocks and sells Atari equipment, Video 61 may send me an offer on these then, as I need the cash.

Also have, but will NOT SELL, unless PREMIUM PRICES ARE OFFERED, these are MY PERSONAL COLLECTION in my ARCHIVES:

ATARI 400, 64K modified with the MOSAIC 64K Board, originally bought the 400 for $355.00, and spent $225.00 for the MOSAIC 64K Board, and had it installed at an authorized ATARI Service Center, in EXCELLENT Condition.

ATARI 800, ORIGINAL, not an XL, has expansion slots OPEN, and contains 48K max of memory onboard, can be upgraded to at least one 288K board, and several people advertised 1 Meg Upgrades for the 800 awhile back.

ATARI 800XL, 256K RAMBO Upgraded, 3 Onboard Operating Systems, Turbo-816 from DataQue installed, tested and used regularly to do my Word Processing on, but the IBM with Xformer emulator removes my need for this, only if offers are high enough.

ATARI 1200XL, in excellent condition, if the right offer comes in, I will also sacrifice this, as I need to pay medical bills, and if I have to sacrifice and lose my Atari computers to do so, then I MUST.

ATARI 1027 Printer, hardly used since replaced by Atari, in excelletn condition, paid $399.99 for it, then $75.00 for the replacement from Atari.

ATARI XMM801 Dot Matrix Printer, the VERY printer I used to create and successfully sell all the Atari XMM801 utiltiy disks, Atari-NLQ, etc., with, cover was destroyed by the Illinois State Police.

ATARI XM301 modem, in excellent condition, used to write and run all our XM301 Terminal and BBS software.

ATR8000 with Co-Power 88 installed, paid $350.00 for this, used, do not have a Co-Power 88 boot disk, so have never used it, and the person who sold it, said he would refund my money, but never has, and another person was going to send me a Boot Disk, but then never did. This has a Retail Value of over $895.00.

ATARI 1050, US Doubled Floppy Drive, excellent condition.

trak AT-D2 disk drive with Turbo Option installed, also have a non-working, supposedly fixed trak AT-D4, needs a new 360K drive according to the repair shop, and they didn't have one.

Copyrights to all my Atari 8-bit Software programs, original disks, backups, several commercial titles, all in excellent condition, will sell my entire package of over 800 ATARI 8-Bit disks, rights to our software, for a flat fee of $375,000.00. Buyer will have all Copyrights transferred over to them, and can probably make millions of dollars with these software items, since ATARI 8-bit users want them, but refuse to BUY from the owner of them at our ridiculously low prices. Why buy a BBS package from us for $19.95, when they bought a PIRATED COPY of it from a Retail Store in New York for $75.00, marked down from $150.00.....

Included in the above Package are all Atari Cartridges, too numerous to mention, everything from Monkey Wrench to BASIC XE, including MAC 65, BASCI XL, BASIC A+, Microsoft Basic, Action! including the Runtime Library, etc..

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE BADLY someone has to have one, or a trak double-sided slave drive.
MAKE OFFERS!!

You'll be happy to know you have a SIO to Parallel port adapter that
allows you to connect standard centronic interface printers to you Atari
computer.
The DIP switches allow you to set options for the printer.

(from very hazy memories of old Antic/Analog ads:)

I do believe that it is a ATASCII parallel port conector... ie: you can
print the full atari character set on a printer, the cart takes atascii
values and outputs it as grafix on the printers end. thus no software was
needed.

I have a few Items I really need to get gone! Lugging these
compnents from 2 different homes in as many years is a pain! :^}
Well, here's the list:

****
Atari 1200XL no powersupply excellent condition. Lovely Black on
white color scheme $15 .... and it goes great with the
****
Atari 1050 A dual density disk drive in excellent working
condition (loaded Seven Cities of Gold to make sure -THAT has
continous disk to mem loading!). Includes the cable and PS $20
****
Atari 130XE powerful pinnacle of Atari 8 bitters. Excellent shape
includes 130XE manual (has basic tutorial for the blt-in basic).
With PS. $30
****
Atari XE Game System (XEGS) enjoy built-in Missle Command and full
compatability with the Atari 65XE/800XL computers. Sports a
detachable keyboard, blt-in basic. PS included. $25
****
Atari XE Carts:
Ms. PacMan $7
LodeRunner $8
Reg Carts:
Basic (useful for 1200XL) $4
Pole Position $5
AtariWriter(wordprocessor)$5
Telelink II (saves modem config info on cart!)$6
****
disk software

First Star's AstroChase
MicroProse F-15 Strike Eagle
Atrai Paint
Educational
Matchmaker Vocab word builder, grammer skills, biology facts

no manuals except for F-15 strike Eagle
Disk Software free with Computer and drive or $2 ea
****
Hey now, if you are interested in any of this drop me a e-mail!
Shippin and Handling is extra btw, so keep on mind I am located in
GA.

Adios

As I recall the 1489 is just an inverter; it doesn't create the full differential voltage needed for true RS-232 compliance. But, since most RS-232 implementations have so much tolerance, it usually works. Chips like the MAX-232 generate around +/- 8-10 V, which is inside of the 'official' RS-232 tolerance.

I have successfully built a cable using the MAX233. This is a chip almost identical to the MAX232, except that it does not require external capacitors for its charge pump. That makes it a good deal easier to work with, since you don't have to connect capacitors everywhere; instead you only have to connect a few jumpers across some of the pins. I was able to construct my circuit inside of the shell of the DB-25 hood used for the RS-232 connector. You can just superglue the chip upside down on the inside of half of the hood, and then make connections to it.

Also, there is no reason why a design using a MAX-23x chip cannot be single chip, by using the same diode hack to simulate a tristate line which the 1489 design uses. That's what I did with my MAX-233 cable, and it seems to work just fine with a 1050 and a PC via the cable sitting on the SIO bus.

Bill,
I knew that. I'm just saying that it could/should be made available
in more than one file format. This would make it more accessible to
more users. I doubt that I would use a TeX version, but HTML, Winword
or Adobe PDF file formats would be quite useable to me. They may not be
the "BEST" formats, but the access to the material is what counts. I'm
sure Ian could have included statements of acceptable use and
distribution within the document.
I've read the news here and know how Ian wants to handle the
redistribution. Now, I'd like to find out what other Compute! books can
be redistributed and what needs to be done to allow this. By the end of
this month I will own a scanner and would be willing to scan in and
forward to the appropriate person, any of the docs I have here. Of
course I will follow any rules set forth by the publisher/author.

Chris,
Actually, no. It's just that most, if not all of the users here
have PC/Macs that can deal with this. However, there is no reason not
to format these documents in AtariWriter or TextPro formats ro even
ATASCII. It could be that the hypertext formats are easier to implement
on the bigger systems. I suppose it wouldn't be too difficult to
implement a hyperreader for these documents. HTML was originally
suggested, because most of us happen to have HTML readers and the
hypertext system would make the MTA come to life.

Enjoy!

I think you are missing the point of the TeX/HTML debate... TeX was recommended because it is easy to go from TeX to other forms... someone mentioned that there was an HTML printing program or odule that would output HTML from TeX... which would make TeX a nicer choice provided:

1) We have enough people to code it in TeX (I don't know TeX)
2) Ian Chadwick wants the book available in other forms (he may not like the idea of a format that easily allows printing)

>
> -Kyle R. Hofmann
Kyle,
Actually, Ian hasn't restricted it to HTML. The discussion started
by Ian suggested that it be done in HTMP then the TeX stuff started.
Ian has stated that he will accept scanned files to help him put the
project together, but the file must only be forwarded to him, not
distributed elsewhere. I suggested that Ian produce the final product
in multiple formats, including HTML, Winword (w/Word BASIC macros for
hypertext), Adobe .PDF, Tex, etc. This would make the book/info much
more accessible to more readers.
If you do scan in the book, and convert it to TeX, forward the
file(s) to Ian directly. Don't distribute it/them to anyone else.

Shining example nothing. Microsofts dim[wit] example.

The only purpose of the '95 version scheme is to make the software be
automatically obsolete in a few years.

You will see this next year when MS comes out with WinDO*S 97 and
Office 97. Then everyone else has to repackage their software with 97
on. Who knows what version it is , but its got 97 on it. People will
upgrade everything just for that.

This method highlights the software RENTING practice of the market.
BUYING nothing. You are buying a licence to a peice of software that
WILL be obsolete in a couple years.(So effectively a temporary licence).
Every couple years you have to renew your LEASE by buying new software.
(Hey, heres a Word 9.0 Document, you can read it right?)

Oh well, In Linux land there is no such practice.

Have fun.

> Does anybody know that??

First, please note that your 1040ST is NOT an 8-bit Atari. It uses the sixteen/thirty-two bit MC68000.

That being said, the 1040ST can be upgraded using aftermarket RAM boards. The only reliable implementations of these board requires solding wires to the MMU chip. I have attempted to upgrade two 1040s, one didn't make it. Be extremely careful if you intend to attempt this operation.

On the other hand, the 1040STe uses standard 30-pin SIMMs, and is extremely easy to upgrade to 4MB.

Hope this helps...

-Michael Ellis

>Does anyone know how to determine if an Atari 800 has a CTIA or GTIA
chip?
>
>Thanks,
>Richard
>
Richard,
This is easy. In BASIC (BASIC Cart installed) Type the following.:

```
10 GR.9
20 F.X=0 TO 79:C=INT(X/5)
30 C.C:PL.X,0:DR.X,159
40 N.X
50 GOTO 50
```

If you have the GTIA, It will plot 16 grey scale bars across the
screen. If not it won't do anything or give you an error. I think it
just goes black.

Remember, there were 4 corresponding zones on the playfield (plus the void).
The material makes the difference (i.e. it blocks, slows or hurts the player).

> I seem to remember talk of an Archon III (amongst people with C64s, at

I picked this up at B&C Computervisions in May for $10. Not bad, but I need the periscope interface to really enjoy the game. B&C has, if I remember, quite a few XE-series carts.

On another note, I remember that the 5200 PacMan was nicer than the equivalent 8-bit version. But now that Dave Spicer's arcade emulator runs the original arcade program, and there's PacPC out there I'm finally satisfied with the home PacMan situation.

```
The Atari 8-bit Hardware Upgrade,
Modification and Add-On FAQ
==================================

| | |
| | |
/ | \

Version 0.3

Dated October 15, 1996

Maintained by: David A. Paterson
Mailto: davepat@total.net

INTRODUCTION

This is a very basic version. I intend to add as
people give feedback to what they want to see, and how
they want to see it. Any info you have is more than
welcome!

PURPOSE

This FAQ exists to describe the various hardware
modifications available to the Atari 8-bit user. It does
not teach you how to do them. It definitely doesn't take
any responsibility for the results if you do try them.
But it will try to give you some information about where
to find more information, which upgrades (or "hacks") are
best, and who to consult if things go wrong. For
addresses and phone numbers of any of the companies
listed, consult the Vendors and Developers List, posted
to comp.sys.atari.8-bit at or about the 15th of each
month.

It also exists to describe the many wild and
wonderful products that have been produced for the Atari
8-bit. Many are unique, some may be apocryphal.
Mainstream items like printers, modems, disk drives and
cassette decks are all excluded, unless I feel otherwise.
Temperature gauges, combination printer buffer/RAMdisks
that run through the joystick port, and other such are
fair game.

POSTING FREQUENCY
```

This FAQ is posted whenever I remember to post it.
It is posted to comp.sys.atari.8bit.

OTHER STUFF I THOUGHT I SHOULD INCLUDE SOMEWHERE

This FAQ owes a debt of gratitude to Michael
Current, Bill Kendrick, Glenn Saunders and Ben Corr for
their contributions. All errors, omissions, blatant
mistakes and attitude problems are mine. If you notice
any, tell me!

PART I - RAM Upgrades

General

The 6502 microprocessor at the heart of every Atari
8-bit has a sixteen bit wide address bus. What this
means is that it can access up to 2^16 memory locations.
That's 65536 bytes. Some people, wanting more memory,
came up with a variety of techniques to use more memory.
Most were built around the idea of bank switching. Bank
switching means that you swap chunks of memory around so
that the CPU can see them when necessary. Most schemes
use 16k banks, though 4k and 32k have also been tried.

Atari 400

The original Atari 400 had either 8k or 16k. Atari produced a board with 48k. Mosaic produced a 32k board, as well as a 64k board with 48k RAM plus 4 4k RAM banks. (ANL 13, IFC)

Atari 800

The Atari 800 came with three memory slots. Each slot could contain Atari 8k or 16k RAM boards. Mosaic produced 32k and 64k boards. Three 64k boards could be combined for 192k.

Axlon produced the 128k RAMdisk board. It banks 16k, using $CFFF as a control register. Banked memory appears from $4000 to $7FFF.

David Byrd created the "800 PLUS 288K UPGRADE" which rewired existing 16k RAM boards, but required additional work to become fully Axlon compatible. A nasty sort of flame war erupted between David Byrd and Jay Torres of the Windhover Project over who invented the upgrade.

Magna systems produced 256k, 512k and 1M boards which followed the Axlon standard. (ANL 65, 68)

Atari 1200xl

See 800xl.

Atari 600xl

As shipped, the Atari 600xl came with 16k RAM. Atari released the 1064 memory module which expanded the 600xl to 64k. MPP, now Supra, produced the Microram 64k Memory Board (ANL 19, 28)

RC Systems produced three expansion modules for the 600xl, raising memory to 32k, 48k or 64k (ANL 26, 12)

Richard Gore produced the Yorky, a 256k board which plugs in to the PBI. It provides full compatibility with 130xe type banking. It is for use on 600xls upgraded internally to 64k, or on 800xls. (AC 3/2, 10)

Atari 800xl

The Atari 800xl came with 64k RAM internal. To access RAM hidden under the OS ROMs, the PIA chip was used (PORTB, used for STICK(2) and (3) on the original 800). Claus Bucholtz published plans for a 256k upgrade which banked 32k at a time using PORTB for control in Byte magazine. (Byte Sept 85)

ICD released the RAMBO upgrade, providing 256k in 16k banks, using PORTB. Newell came out with the 256k

XL, which would work on a 1200xl or 800xl, providing 256k total memory, . The two upgrades used different sequences to access their banks. (ANL 44, 115)

Charles Bucholtz updated his upgrade to use 16k banks after the release of the 130xe. Most of the 800xl upgrades can be made compatible with Antic banking. The only possible problem would be when Antic and the CPU are supposed to be using different memory banks.

The Yorky will also provide 256 on an 800xl (see the entry under 600xl).

Newell released 1Meg and 4Meg upgrades for the 800xl. These banked 16k as well, and required disabling internal BASIC to properly access the memory.

Fine Tooned Engineering, having bought the rights to ICD and Newell's products, is bringing out a third method in the Mars 8. Though not yet released, it will use SIMMs for 256k, 1Meg or 4Meg RAM.

The 800xl is arguably the most popular Atari 8-bit for upgrades, since most 800xls have socketed chips.

Atari 130xe

The 130xe was the first "official" method of banking memory. It too used PORTB, but with an added twist: ANTIC and the CPU could access different banks. This provided headaches for some owners of "older" upgrades, but few programs took advantage of this feature (SpartaDos Wedge and VideoBlitz demo only). Upgrades for the 130xe include replacing one set of 64k chips with 256k chips, raising the RAM to 320k. Adding another 256k for 576k total has also been done. These were designed by Scott Peterson, as was a 1088k upgrade.

PART II - Video

Upgrades

The most common video upgrades are the SuperVideo series, described in AC 2/6. Plans were provided for the 600xl, 800xl, 1200xl and 130xe. The SuperVideo upgrade provides the forgotten chroma signal on the monitor port. It corrects a number of errors in the parts in the Atari video circuit, resulting in a clearer image, particularly on monitors.

Providing TTL output was also covered in AC 2/6. Bob Woolley provided plans for the circuit, as well as instructions for getting TTL output from an XEP80. Be warned that the output is not in the standard Atari

colours; on a CGA type screen, the sixteen possible shades are translated into eight colours.

80 column devices

Since the 400/800 were released in 1979, people have been clamouring for better text displays than the default 40x24. Two products were released for the 800: The Austin-Franklin 80 column board and the Bit 3 80 column board were both for use in the Atari 800. They replaced the third memory module. The Austin-Franklin board came with a "Right Cartridge" which provided the drivers. Removing the cartridge disabled the board. Some software would not run with an 80-column board installed.

Ace 80/80xl was a cartridge released which provided 80 columns by using bitmapped graphics on an 80 column screen. A similar technique was used in the Newell Omniview, an add-on for their Omnimon.

Atari's entry into the 80 column field was the much maligned XEP80. For maximum compatibility, the XEP80 attaches to the computer via a joystick port. It includes three character sets, 8k internally, and a parallel printer port. The software provided by Atari supports a 320x200 graphics mode. This mode only supports direct bit images. Hacks have been released which hook the XEP80 on via the parallel bus.

Recent terminal programs have added two other display techniques. ICE-T uses a graphics 8 screen and fine scrolling for its display. FlickerTerm uses two graphics 0 screens a half-character apart, each displayed during alternate vertical blanks.

In a series of articles in the SLCC newsletter, Bob Woolley gave hardware plans for installing an 80-column TTL output inside an XL.

Nir-PAL

With the decline of Atari in North America, more and more quality software was migrating across the Atlantic which was all but unusable. Why? European Ataris are built for the PAL broadcast standard; North American Ataris use NTSC. Not knowing it was impossible, Nir Dary upgraded an NTSC Atari to run PAL software properly. Swap out the NTSC Antic chip for a PAL Antic, do a minor modification to the OS, and voila! Your Atari is ready to join the EU. (Better stop before the abbreviation police arrive!)

Genlock

In October and November of 1991, Michael St Pierre published articles in the SLCC Journal describing plans for a monochrome Genlock. A genlock is a system to synchronize live video with a computer image. Graphics can be overlaid, faded in or out, or used for titling.

In 1994, Michael announced Prism Studio, a full colour genlock. It is sold by Mytek.

Computer Eyes

Computer Eyes was a video capture system which plugged into two joystick ports. It could render images in a variety of modes. It required a composite video source. (ANL 35, 53)

Easy Scan

Take a cartridge, add a fibre-optic cable, and hook it onto a printer, and you've got Easy-Scan, an image scanner for the Atari 8-bit. Innovative Concepts produced this item. (ANT 7/6, 43)

PART III - Operating Systems

Computer OS
-------- --

400/800 Rev A. No self test; Memo Pad mode.
Rev B. Fixes several bugs in Rev A.

1200xl XL OS. Some incompatibilities with 400/800 OS

600xl/800xl Revised XL OS. Includes parallel bus handlers. Internal BASIC.

65xe/130xe Revised XL OS. (as above)

xegs Modified XL OS. Self-test mode changed. Internal Missile Command and BASIC.

Operating System upgrades

UltraSpeed + OS : from CSS. Supports high speed disk communication. Drives 1 through 9. Any RAM upgrade. Includes three modes: standard XL/XE OS; 400/800 OS; UltraSpeed+ OS. For XL/XE systems.

Omnimon: from Newell. M/l monitor for 400/800. Installs into $C000 page of memory, otherwise unused.

RAMROD OS: from Newell. Replacement for 400/800. Includes accelerated floating point math package.

RAMROD XL: from Newell. OS speed-up routines, fast math, and Omnimon. Includes option for second OS.

XL Boss: from Allen Macroware. OS replacement for XL model computers. Includes m/l monitor. 400/800 OS compatible.

TurBoss: available from KP and Best. Fast math and fast screen routines. For XL/XE computers.

DP OS Version 4: my own effort (donï¿½t ask about versions 1 through 3!). Fast floating point math, fast screen display, graphics 0 screen dump, fast keyboard repeat. For XL/XE computers.

SmartOS: This is a hardware upgrade that installs a battery-backed RAM chip into your XL/XE. This lets you fool around with changing the OS and not have to burn new EPROMs constantly. Presented in AC 4/3.

PART IV - Sound

Voice Master

Covox sold the Voice Master and Voice Master junior. These would capture and record speech. Bundled software attempted recognition of commands, with limited success. (ANL 47, 44)

Parrot

The Parrot was a sound digitizer sold by Alpha Systems. Resembling a paddle, the device had phono jack for input. Antic provided plans for a similar project, called the Antic Sampling Processor. (ANT 8/8, 11)

SoundMouse

Among the more esoteric products ever released was the SoundMouse, which interpreted sound to provide a reading on a paddle register. It did not act as a digitizer, like the Voice Master and Parrot did. Bundled software made the lava lamp look mainstream in its appeal. No commercial applications taking advantage of this unique device were released.

Gumby

Chuck Steinman of DataQue created this set of plans for building stereo sound by installing a second Pokey chip (Pokey and Gumby, get it?). Once installed, the second channel has all its addresses 16 bytes higher in memory ($D210 - $D21F). A small number of demos have been released in stereo.

available at the umich atari archive

POPS

Lee Brilliant, ANALOGï¿½s resident hardware guru, came up with this system for stereo sound, running it off the clock line on the SIO bus. As with Gumby, it requires customized software to use. (ANL ???)

MIDIMATE

MIDI stands for Musical Instrument Digital Interface. It is a system for computers to record, replay and control musical instruments. MIDIMATE, when combined with MidiTrack software, permits an Atari 8-bit to take control. Why buy an ST? (ANL 33:26)

SIO-2-MIDI Interface

This is a set of plans to make your own MIDI interface. Limited software is included.

available at the umich atari archive

PART V - Other Neat Stuff

Zucchini

In ANL 59,60 and 62, Dr. Lee S. Brilliant provided plans and software to turn a surplus Atari into a printer buffer for another Atari. He called it "The Atari Zucchini".

The Printer Buffer Routine (PBR) and Disk Emulator Routine (DER) came from B.L. Enterprises. They were cartridges and cables which worked in a similar fashion to the Zucchini. The PBR provided a buffer, while the DER emulated a disk drive on the remote computer. Stock XLs gave 403 free sectors; a 130xe would give 914. (ANL 65, 67)

PIA2

With the use of PORTB for RAM banking, hackers were looking for more parallel outputs. This plan, for adding one more PIA chip, includes notes for adding two more. It was intended as a means to control large RAM upgrades. (AIM 3/2, 16)

Critical Connection

A long time ago, in a galaxy far, far away, was a mystic operating system known as CPM. A company named USS Enterprises produced the Critical Connection, a device to permit a CPM computer to emulate disk drives for the Atari. It was a cable, plus software for the CPM end of the system. The CPM system could also act as a printer buffer, and the CPM keyboard could be used in the

place of the Atari keyboard. (ANL 39,103)

SIO2PC

With the demise of CPM and the rise of the IMI cartel (IBM-Microsoft-Intel) a new system similar to the Critical Connection arose. Nick Kennedy developed the SIO2PC hardware and software, which permits any PC with a serial port to act as up to four disk drives for an Atari. It can also act as a printer buffer.

APE

Stephen J. Tucker took SIO2PC one better and wrote new software. The Atari Peripheral Emulator (APE for short) lets your PC act as high-speed drives. It lets you print to your PC printer. And it lets you use your PC modem on the 8-bit. It also permits, with a special cable, the creation of backups of copy-protected disks.

available at the umich atari archive

WIMA Radio, Lima, Ohio

This radio station, when automating 6 broadcast hours daily, created a hardware and software package built around a 130xe for control. Control was via joystick ports and tone decoders. (ANT 8/7, 30)

Comp-U-Temp

This provided 8 or 16 channels and 2 or 4 sensors. It would monitor the temperature, with options to log results to disk or printer, or to sound an alarm if the temperature strayed out of set boundaries. The software was described as "cumbersome". (ANL 48, 35)

Atari Lab

During one of their periodic restructurings, Atari decided to sell their computers as educational. Thus, the Atari Lab series was produced. The two kits released provided experimenters with tools to measure light and temperature. Of course, the next restructuring left this an orphan product.

Turbo 816

Released by DataQue, this provided a replacement OS as well as a replacement for the 6502 CPU. A 65816 was substituted, providing new opcodes and a 24 bit address space (16Megs vs 64k with the 6502).

Sweet 16

Released by Fine Tooned Engineering, this provides a 65816 CPU to replace the 6502.

Bob Woolleyï¿½s 65816 Upgrade

Notice one name popping up again and again? In AC 3/3, Bob began explaining how to add a 14 mHz 65816 to your xl. Thatï¿½s right, parallel processing. Complete plans were never published.

MicroNet

Supra provided the Atari community with its first networking product. MicroNet provides nine SIO connectors. Eight are for computers. The ninth goes to whatever peripherals are to be connected. The system served to isolate the computers electrically. It did no software checking, meaning that two or more users attempting to print or save at the same time could trash each others output. (ANL 51, 76)

MultiPlexer

CSS provided a better way to network. The Multiplexer system requires one host system which has all the disk drives and printers for the network. The slaves are connected via the cartridge port to the host, and all their disk and printer i/o is rerouted to the host. All the systems involved require their OS replaced with a special multiplexer OS.

GameLink II

The most recent innovation in networking the 8-bit Atari, GameLink II permits up to 8 machines to share information for interactive games. Currently, only the Maze of Agdagon supports this system. DataQue sells cables and the game.

J-Net

Released to on-line services and possibly to the Umich archive as well, this set of programs was designed to interface computers by the joystick port, using 3 bi-directional data lines and two control lines.

MIO

ICD manufactured this wonderboard in 1987. Connected to the PBI or ECI, it provided either 256k or 1Meg of RAM, two RS232 ports, a parallel printer port and a SCSI hard drive port.

MIO II

Currently under development by Fine Tooned Engineering, this PBI/ECI board will provide an interface and power supply for an IDE hard disk. It may also include extended memory support for CPU upgraded computers, as well as a parallel port.

Black Box

CSS manufactures the Black Box, a PBI/ECI device that offers an optional 64k printer buffer. Its main attractions are its m/l monitor, 19200 baud RS232 port, parallel port, and hard disk interface. The parallel and serial ports do not use standard DB9 or DB25 connectors; custom cables are required.

Floppy Board

This is an add-on to the Black Box, also from CSS. It permits standard floppy drives, 360k, 720k, 1.2M and 1.44M, to be attached to the Black Box. Since they are connected to the PBI, these drives operate extremely quickly.

Supra/KP Hard Disk Interface

Supra released one of the first hard drives for the 800xl. It hooked up via the PBI. KP bought the rights to the interface from Supra.

Corvus Hard Disk System

The earliest hard disk interface, the Corvus system hooked up to a 400/800 via joystick ports 3 and 4. A custom DOS would be booted from a floppy disk to permit the computer to access the hard disk, which was divided into 720 sector partitions.

IDE Hard Drive Interface v1.0

New from Poland, this promises to let your XL/XE take control of new IDE hard disks. Its design will permit future systems to break the 16 megabyte boundary.

mailto: CONRADUS@plearn.edu.pl

Bob Woolleyï¿½s IDE Interface

Some guys are constantly hacking hardware. And then thereï¿½s Bob. Memory upgrades? PBIs for 1200xls? 80 column devices? Battery-backed RAM operating system? Somewhere, after all those, he found the time to interface the xl/xe parallel bus with an IDE hard drive. Plans to be published in the next Atari Classics magazine.

Amdek 3ï¿½ drive

Amdek released a new standard for disks: a rigid 3ï¿½ plastic disk that could store a whopping 360k (but youï¿½d have to flip the disk for that). It never caught on.

ATR-8000

SWP Computer Products made this original wonder-widget: Serial and parallel ports, standard floppy interface, optional hard disk interface and even CPM and MS-DOS add-ons.

512k ROMDisk

From Klaus Peters in Germany, this system provides a solid-state alternative to floppy and hard disks. Using up to 8 27512 EPROMs, this setup provides high-speed PBI access to commonly used software

R-Time 8

This is a clock cartridge for any Atari from Fine Tooned Engineering. It includes a pass-through connector so that any other cartridge can be plugged in as well. Though primarily intended for SpartaDos, software for other DOSes is included.

???? Clock Cartridge

Announced ï¿½way back in Atari Classics 1/1, this product was intended as a replacement for the R-Time 8. Software difficulties have kept it from being released.

Mars-8

This is still under development from Fine Tooned Engineering. For 800xls only. Memory expansion of 256k, 1M or 4M. Install internally Action, Basic XL/XE, MAC/65, SpartaDos X, R-Time 8.

Atari 850

This device hooks into the SIO line, and provides 4 9-pin RS232 ports and a 15-pin parallel port. The RS232 ports are NOT IBM PC standard. The MIO and PR Connection use the same pinout.

P:R: Connection

This device plugs into the SIO line, and provides 2 9-pin RS232 ports and a 15-pin parallel port. It is powered by the SIO line. The Atari 1200xl requires an internal modification to work with this device, or with the Atari XM301 300 baud modem.

Sidersï¿½ Serial Interface

With 850s and P:R: Connections becoming increasingly rare, Kenneth Siders released plans to build a high-speed serial interface using only 2 ICs.

Atari 1090XL Interface Box

Ever look in the back of an Apple II or an IBM PC, and envy the expansion cards? Atari was planning to release a similar expansion box. The full specs were written up, and prototypes were sent out to hardware developers. As usual, Atari took this great idea, buried it, and forgot about it. These are EXTREMELY rare; Iï¿½ve only ever seen two for sale. Definite collectors pieces.

MPP 1000 Modem

The joystick port is a parallel port. The SIO port is a serial port. So where would you hook up a serial modem? MPP (now Supra) plugged a 300 baud modem into the joystick port. Running at 300 baud, with software that couldnï¿½t d/l files longer than 32k (an Xmodem bug), this is what got me started in the on-line world, and what got Supra started in the modem business. Wonder if I could trade in my old 300AT for a new 33.6k?

Voice Box II

Manufactured by the ALIEN Group, this speech synthesizer even made it into TIME Magazine in their "Machine of the Year" issue in 1982. Plugging into the SIO line, this device would produce speech of the traditional computer variety.

R/128 RAMdisk Printer Buffer Spooler

Protronics of California announced this 128k RAMdisk/printer buffer which interfaced via the joystick ports, offering it as a replacement for the 850. A 512k upgrade was promised. (ANT 2/8, 106)

N1858-32

Newell Industries announced this 850 replacement in 1983. It offered two serial and one parallel port, along with an expandable 8k printer buffer. (ANT 2/8, 106)

Oscar Model 1

This bar-code scanner was from the Databar Corp. The intent was to permit the speedy entry of computer programs which would be encoded in magazines. (ANT 2/8, 107)

1200XL PBI

Hackers love the 1200xl for two reasons: because of
all the space available within the case, and because of
the great keyboard. Bob Woolley came up with this set of
plans for adding a parallel bus interface to the 1200xl.

available at the umich atari archive

Arm Your Atari

ANALOG magazine provided this unique information on
interfacing an 8-bit to a Radio Shack Armatron remote
controlled arm. Positioning was determined using the
paddle/potentiometers, and control was via the PIA
(joystick pins).

=== End ===

Two joystick ports?
Why would you need two?
Just use a two-joystick adapter cable.
You want to use a one port PC for use with 4-button joysticks.

Well, considering who is selling this stuff ... I'll offer $1 (1 buck) for the
entire lot. "Let those that have eyes, see; let those that have ears, hear!"

Don't believe everything you read about your memory in that "memory test". I have had it vary from start-up to start-up. Bad connections on cartridges and dirty heads on disk drives and/or bad disks usually cause the computer to go into the test mode unasked. Clean everything up and try it again.

Norm

: There's not really a need to use a "boot" disk like on PC's and 8-bits,
: unless it's the first ST models that have TOS 1.0

I have TOS in ROM.But it's TOS 1.0.I'd like to have the modern one.
People complain that games don't work with anything but the original.
That's what Translator disks are for!

: > GEMDOS and MS-DOS use the same format.But the PC drive controllers are
: > really "delicate" and any slight difference in the ST and PC controllers
: > can cause problems.

: I'm curious...can one write a custom program, on a PC, that can read
: different formats? I know it's all in the BIOS program I think...

Actually,it's all in the controller.A fully functioning controller can use
FM (single density) and MFM (double density) disks.
The sector size starts at 128 bytes,and keeps doubleing to 8192.
(hence 128,256,512,1024,2048,4096,8192)
Besides changing density and sector size,there's not much you can do.
The BIOS sends packets to the controller just like the Atari does to it's
disk drives.

3084. prg for finding bad sectors on format

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-15 00:00:00 UTC

Anyone know of a programme that formats a disk and then uses the bad
sector information from the drive to mark off the bad sectors?
Idealy a programme for MyDOS and SpartaDOS disks.

(of course the MyDOS disk would have it's bad sectors de-allocated by VTOCFIX)

There is at least one advantage to using an emulator: I can fit my whole 8-bit system--an 800, 800xl, a 130xe, disks, carts, and all--on a Zip disk and carry it around in my shirt pocket. ;-)

(BTW, I still have the real thing set up in the basement. Why choose? Use both!)

From BASIC type:

```
10 GR. 10
20 GOTO 20
```

If the screen goes black, you have a GTIA.

Also, there is usually a small sticker with a "G" on the bottom of the
case if the GTIA chip was installed at the factory.

: Here is the pinout of the ports on an 800/XL/XE. The 2600 controllers
: are compatible with the computer line so this information should be
: valid for the 2600 as well. Remember, I am giving the pinout of the
: PORT so the pinout on the controller plug will be reversed right to
: left.

: 1 2 3 4 5
: 6 7 8 9

: 1. Stick Forward
: 2. Stick Back
: 3. Stick Left
: 4. Stick Right
: 5. Potentiometer B input
: 6. Trigger
: 7. +5V
: 8. GND
: 9. Potentiometer A input

You forgot the paddle trigger lines.
The "stick left" and "stick right" lines are the triggers on the paddles.

Do you realize that you could hook up a five button analogue joystick to
each port on the Atari?

: I have some questions of my own:

: What are the value of the pots used in the paddle controllers?

: Do the axes of a 5200 analog stick map to the potentiometer inputs of
: the standard 8-bit jack? How would one read a 5200 keypad on the
: 8-bit computer?

: Has anyone ever figured out how to read the keypad that comes with
: the 2600 Star Raiders game on the 8-bit?

They're the same as the "Keyboard Controllers" on the 2600 that you used with BASIC and educational games.

: What is the value of the pots used in an IBM joystick?

Probably less than a quarter ($.25).

: nothing like the original, but at least a bit close. This is horrifying.
: If anyone has any answers, I'd highly appreciate it (either e-mail or
: here) - being a major Atari 800 fan from way back when. :-)

Too bad the PC doesn't have a RESET key like the Atari and many others.
(or at least a "END" command)
I just go in to my sound test programme that came with my sound card.
You could play a VOC or CMF file to clear it out too.

See,the sound card doesn't appear as a device to the PC OS.
So,while normally all files and devices in use by a porgramme are
closed/de-activated when the programme terminates,the sound card is
directly controlled through hardware,and hence stays on/open.
In fact,there is no way to control it through the OS.

Yeah, unfortunately - that's the way it is. Believe it or not, I load up
X-Lit 6.0, and that clears bad sound hums and such from Xformer. In
fact, this new version of X-Lit has quite good sound emulation, enough
that I'm not even bothering with Xformer 3.5, since this new version

came out. Now, I can wait 'till the game-compatibility rate increases. While many games work on XL-It, there are quite a few favs they don't. I noticed on many of the incompatible games, as soon as you press start - your character/player dies instantly. :-)

XL-it 6.0 has now become my favorite emulater for 8-bit Atari. I will gladly support the work of this author.

Thanks for your input.

3096. Combat revealed: source code (LONG)

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-15 00:00:00 UTC
From: nickb@primenet.com
Message-ID: <54205p$3qt@nnrp1.news.primenet.com>
Source record: 79509
Cross-posted to: alt.religion.kibology,rec.games.video.classic,comp.sys.atari.8bit,comp.sys.cbm

If you want to learn some tight coding, take a look at this. On a normal machine this would be even less than 2K.

[NOTE: I haven't updated this since August 12, but there's a good chance it's more recent than your copy. Please update it if you run an FTP site.]

```
; Combat for Atari by Larry Kaplan
;
; Original disassembly by ???
; Commented further by Nick Bensema.
; Last Update: 08/05/96
;
; First a bit of history. Combat was included with the
; famous Atari 2600/VCS for many years. As a result,
; if you go to any thrift store, you will find crates
; of Combat cartridges, and some guy from
; rec.games.video.classic swimming through it, refusing
; to admit that Sum Guy just ran off with the mega-rare
; Chase the Chuckwagon cart with the misprinted sideways
; label that he's looking for.
;
; To fully appreciate the trouble people had to go through
; to make an Atari 2600 game, I decided to try my hand at
; picking apart a relatively simple game, Combat. This
; game works in only 2K or ROM and not even the full 128
; bytes of RAM made available to it. As if that weren't
; enough, the program has to literally draw the screen
; every single frame, and even Combat had to resort
; to changing some graphic or other in the middle of
; a scanline. And the programmer had to walk five miles
; to work, uphill both ways! And he only got a nickel
; a day for writing code!
;
; The Atari 2600, or the VCS, or the 2600VCS, or the
; Atari VCS, or the 2600, or the VCS-2600, or the Sears
; Home Arcade System, or the Intellivision Add-On Thingy
; That Plays Atari 2600, VCS, 2600VCS, Atari VCS, 2600,
; VCS-2600, and Sears games, runs with a 6507 processof.
; This processor is exactly like the 6502 found in Apple,
; Atari, and Commodore home computers except for two
; things: 1) it has a wait state, and 2) it has only
; 13 address lines instead of 16. So, while your Apple
; II can address $0000-$FFFF, the Atari 2600 could
```

```
; only address $0000-$1FFF. That's a whopping 8K.
; The cartridge ROM accounted for anything about $1000.
; You're going to love this part. It had 128 bytes of RAM
; at $0080-$00FF, and the TIA, its video chip, which
; doubles as the 2600's entire video memory, at both
; $0000-$007F, and $0100-$017F. The first copy, along
; with the RAM, could be accessed with zero-page addresses,
; saving space on the ROM, which by the way was 2K.
; The second copy infiltrated the last 128 bytes of the
; 6507's built-in stack. In the source code, you'll see
; how this is used to the programmer's advantage.
;
; That's all I'm explaining. If you want to hear more
; on the 2600's specifications, do a web search for
; 2600 programming information, because I've already
; wasted so much of your time.
;
; I did a lot of cutting and pasting and searching
; and replacing. Be sure to check that this compiles
; to exactly 2048 bytes, and that it matches up with
; all of your uncommented source code before trying to
; modify it... if you dare! For some reason the guy
; who disassembled this didn't put $ before all the hex
; numbers... so keep in mind, hex is always implied.
;
; I also suggest you hand this to those who want to pirate
; 2600 cartridges. Not that it'll stop them, but it might
; make them feel guilty enough to seek absolution.
;
; Not having an assembler, and of course not wanting
; to try to use an emulator, I may have screwed up
; big-time on many aspects of this program.
; Forgive me if I did.
;
; Note a few things:
;
; 1. If you don't know what the BIT instruction does,
; I'll just sum up how Kaplan used it here. Kaplan
; used BIT to test bits 7 and 6 of a memory location.
; If bit 7 was set, the negative flag would be set,
; so the following BMI would cause a branch. If bit
; 6 was set, the overflow flag would be set, so the
; following BVS would cause a branch. If I find an
; assembler that does macros, I'll use those to do this.
;
; 2. I might refer to players as tanks even though they
; could just as easily be biplanes or jets.

;
; This subroutine sets up the sprite data for each
; player. The graphics data at the end of the ROM
; don't account for an entire 360 degrees of movement,
; it would take less memory to just draw 180 degrees'
; worth and write code to compensate for the other half
; of the circle.
;
; Bit 3 of DIRECTN for each player determines whether
; he is past 180 degrees, and when this bit is set,
```

```
; this subroutine compensates in the following ways:
;
; 1. It sets the TIA's reflection flag for that
; player, taking care of the horizontal aspect
; rather easily.
;
; 2. Instead of starting at byte 0 and ascending to 7,
; it starts at byte 7 by EOR'ing 7 into the address,
; and it descends to 0, using the carry bit as a
; flag to determine whether to increment or decrement.
;
; The X-register starts at 0x0E plus player number
; and goes down by two each time through the loop,
; until it hits zero. This way, after calling this
; subroutine twice, every even-numbered byte contains
; the left player shape, and every odd-numbered byte
; contains the right player shape. It seems odd, no
; pun intended, but the screen-drawing routine is
; designed to handle it.

;
; Two-dimensional array, 12x3.
;
; This array specifies what the joystick does
; in each game. Looking at it now the format looks
; like this:
;
```

```
; Low nybble = Amount to rotate object (signed)
; $00 = Not at all
; $01 = Clockwise (+1)
; $0F = Counter-clockwise (-1)
; High nybble = Speed to move object (unsigned)
; $00 = Not moving
; $F0 = Warp speed
;
; The $FF's are just there because nobody will EVER
; move the joystick up and down at the same time.
; Of course, if they did, the tank, for example,
; would move at fifteen times normal speed.
; Likewise, if you moved left and right at the same
; time (or pushed both paddle buttons at once),
; tha tank's controls would index into the biplane
; controls and move at five times normal speed.

How about a texinfo document.They're hypertext AND can be read with a
normal text viewer.

: But a TeX or LaTeX format manual would be easy to print out, and look
: pretty. I HATE printing HTML docs. They look lousy on paper. And
: my copy of Mapping the Atari was lost in 1990 (along with all my copies
: of Compute!), so I want a copy!

I usualy prefer electronic documents to real ones.

Robert Smith Ely (rely@ix.netcom.com) wrote:
: My current view on this, after reading all of the discussion, is, why
: limit our selves to only one format? Produce it in as many formats as
: possible. HTML for hyperviewing, TeX for book republishing, Winword or
: similar for those that want to simply print it out and ATASCII for
: those that have only 8-bit systems. Personnally, I probably use all but
: the TeX version, but that's just me. Any way you look at it, it should
: be scanned in and made available. That goes with all Atari 8-bit texts.
: Well, there's my $0.02.

Actually,if you put it in nroff format,groff (GNU nroff) can translate it
into postscript,which (I think) can be translated into other formats.
My groff is sort've old,maybe it has more post-processors now.
(what translates groff's output into TTY,ps or other forms)

Though I don't really see the point of using anything else than ATASCII.
If you really have an Atari,SDVert can translate it into ASCII for you.
(much more quickly than Bob Puff's DiskDoctor)
DataQue's "TT" can do it on the PC side.UNIX's "tr" can do it for Linux
and such.
If it's going to be in 80-columns (which seems somewhat anti-Atari to me),
you can use the text viewer that comes with Ice-T,the term programme.
(on the Atari)

: discussing making an electronic version of an Atari-8-bit-specific book --
: in formats that the Atari 8-bit can't be used to READ. Did I miss a
: philosophical/logical disconnection here somewhere in the last couple of
: weeks?

If it's put out in nroff,you could use your system's nroff command to view
it and translate it to ASCII.
(if you have a "man" command,you must have nroff,which translates the
man-page to ASCII for your viewer ("more" or "less") to show)

Much Information deleted...

Sir,

While I acknowledge your rights, in a free democracy, to make such posts to a public newsgroup, I must demand an apology from you. How DARE you insult my intellegence by asking such OUTRAGEOUS prices for decades old equipment?

Computer hardware and software, unlike collectible items, do not appereciate in value. Quite the contrary, prices plummet rapidly over even short spans of time. It behooves the smart retailer to recognize this market force and to price stock accordingly.

However, as Usenet is a medium that can easily distort the original intent of ones message, if this post of yours was meant as humor, I sicerely apologize! Taken in that context, your article is QUITE amusing....

As to these copyrights that you hold that are so valuable.....please explain why YOU have not made millions of dollars on them rather than selling them at a mere FRACTION of their value.

The Truth Is Out There.....and so, apparently, is Admiral Nuguru

: > >hate it. I even have a used copy of it where someone scrawled
: > >"Stupid scrolling 2-player game". Their loss.
: > >--

: A new 9o's version of Ballblazer is scheduled to be released soon for the
: Sony Playstation.

: Based on the screenshots, it appeared very similar to the old Atari 8-bit
: version -- rotofoils, goals, and the ball were all in the field of view,
: but the graphics were spectacular compared to the 8-bit classic.

Great,but I tend to wait until the games are under $20 before I buy a new
system.

: As far as two-player games go, I rank Ballblazer in the same league as
: Mule, Archon 1 and Archon 2, and Dandy (the precursor to Gauntlet,
: released by APX -- you could even play four player Dandy on an Atari 8oo).

I dunno,M.U.L.E. was too businessy.I prefer WAR strategy games.
The (Return of the?) Archons,of course,are the best.
Dandy,yet another example of why I like Big-Text modes.
You could make up you own levels.
But when playing with others,it was easy to run off the side of the screen
and get lost.
Also;you can see the effect of four-player operation on a 800XL.
Player 3 will move the same as player 1.The same with 4 and 2.
This has to do with the XL OS.

: Well, that's enough reminiscing for one day....

: >
: >Any help would be greatly appreciated.
: >
: Eric,
: No. The jiffy clock in the 8-bit is not precise. You'd have time
: drift +/- depending on the machine. If you add an R-Time8 cart to your
: system, it would be better, but still not completely accurate. My
: R-Time8 can drift as much as a minute/month. That is probably close
: enough. The jiffy clock (counter) will most definitely drift much more
: than a minute/day, maybe more. For stuff that doesn't need even that
: close timing, then sure! There are lots of things you could do this
: way. I just wouldn't recommend it for long durations without
: adjustments. Of course, it may be just what you want for lights and
: such for security.

Your problem might be that many think that a jiffy is 1/60th of a second.
There are actually 59.92334 jiffies in a second,not 60.

>keyboard

My 800XL has what I term a Great keyboard. It was my first Atari computer,
and now I also have a second hand 600XL. (Ironic eh?) My 600XL has what
I term a Cruddy keyboard. It's stiff and tall and very uncomfortable to use.
By comparison, the 800xl has a lowprofile, soft touch keyboard, and is a
pleasure to use. The surface texture too is smooth, where the 600xl one
is rougher...

I don't know what changes Atari made to their kb's, but some are great,
some are cruddy. The XE kb's are not great, but not as bad as the 600xl
kb I have.

LONG LIFE ARCHON! :-)

I have two 800XLs (actually one is my dad's and one is mine). Mine, in
addition to having a RAMBO XL which I installed personally :), has a very
nice keyboard like the one you describe. My dad's, on the other hand,
appears to be an earlier machine (all the chips are socketed where many of
mine are soldered), and has a very stiff keyboard with tall keys. I can't
type on it very well because of how much friction there is when pushing in
a key.

-
-Has anybody here personally ever had any success copying carts? I
-tried it a couple of times with a Missile Command cart and using a
-cart copying program (forgot the name of it), but I've never gotten a
-successful copy, inserting the cart either locks up the computer or I
-end up with a file that doens't run (and that's with a regular 8K
-cart, I can imagine that trying to copy a bankswitched cart would be
-close to futile)......
-
-
Yes, copying carts is easy. Not when they are bank select though.
I cant get the data to bank select to get all the info out of the
cart.
Thats not even counting rewriting the darn thing so it runs out of RAM
and doesnt bank select anymore.
"Cartcopy" by David Young always did it for me. Later carts were
protected though. (Missile Command wasnt)

3123. Precision Timer?

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-16 00:00:00 UTC
From: ericcron@wwa.com
Message-ID: <541ll4$e7h@kirin.wwa.com>

Can I use an Atari 8bit as a percision timer for a household appliance?
I want to be able to run something for two minutes, then turn it off for
twenty, and continue that cycle indefintely.

Any help would be greatly appreciated.

If anyone has any trouble running files that he or she may
download from Yogi's Web site..such as alot of those games
from over sea's..use RanaDOS..aka SmartDOS to run your
D/L's. This Dos runs almost any file..including the Over Seas..
stuff. For those who don't know what I am talking about check out
www.3rd Planet.Com via the URL that C.P.L. (Cleveland Public Libraray)..
TYPE: G key to call up the URL..and surf the WEB free..Yea, FREE.

I am a young alien type declaring now that: I am not Cool anymore..

Eric,
No. The jiffy clock in the 8-bit is not precise. You'd have time
drift +/- depending on the machine. If you add an R-Time8 cart to your
system, it would be better, but still not completely accurate. My
R-Time8 can drift as much as a minute/month. That is probably close
enough. The jiffy clock (counter) will most definitely drift much more
than a minute/day, maybe more. For stuff that doesn't need even that
close timing, then sure! There are lots of things you could do this
way. I just wouldn't recommend it for long durations without
adjustments. Of course, it may be just what you want for lights and
such for security.

I remember that there was some trick in The Miner 2049er cartridge where you could warp to any level that you want. I know you had to type something to turn on that feature. What was it? Big Five's phone number? I tried that and it didn't seem to work.

If anyone can refresh my memory, please do!

Thank you

It limits the audience too much... Even I would like to hear about
games or other publications or new s/w or type-in programs or
reviews.... It is little more work to send out 1000 issues than 100 -
and it is a lot more satisfying..... Not that we're in it for the
money, but we need a certain critical mass to really represent the
remaining 8-bit community.

It's my understanding that the keypad for Star Raiders is the same as
the keypad from 2600 BASIC(and some of Atari's other educational carts)
and that it can be read using code from an example program in the back
of the Atari Basic Reference Manual that came w/ most 8-bit computers.
(or did you mean read the keypad on a pc?)

I copied some of my old carts to use with Rainbow. I first tried using a program called DMPCRT from the CIS library. It works well with anything that can boot DOS (language carts, AtariWriter). But with games, I couldn't get it to work--it'd alway freeze when I inserted the cart. I got ahold of a commercial "cart backup" program called "The Impersonator" from B&C and was able to do all the 8k and 16k carts that were left. As far as bank-switched carts go, only the OSS SuperCarts have been done successfully, as far as I know. And only Rainbow can run them. OTOH, many of the old 8k and 16k carts were converted to binary disk files by crackers years ago and a lot of them seem to be in Yogi's archive and elsewhere. (try ftp://ftp3.cyberspy.com/atari8).

Has anyone been able to get the 'jumpman.atr' disk image to work with any of the emulators? I haven't had any luck with: xlit016, xformer, or pokey. Pokey can handle the frames but doesn't have adequate cursor joystick support, xlit016 has good cursor-joystick support but can't handle the frames and xformer doesn't work at all. Has anyone been able to get 'jumpman.atr' to run any better than this? If so, please email or post a reply. Thanks

Falcon

Subject: Dear Eric

Dear Eric
Can you post this request onto the comp.sys.atari.8bit
newsgroup for me?

I can only read from the newsgroups and not write/upload to it.
I am after the info about hooking up an Atari 1050 disk drive to the
PC for transferring disk images over.

I have lots of demo programs on some old 5.25" disks that I'd like to run
under the Xformer 2.51 Atari 800/XL emulator.

A lot of these old disks are US Doubler with skewed sectors,
or SpartaDOS true double density disks.

Can disk images be transferred across intact and usuable, where upon
a self-booting machine code menu is being used. ie. the disk format is not
standard SpartaDOS format.

The SIO2PC cable sounds like it's more costly? and has the hassle of
transferring from computer to computer, whereupon you need the right
software running on their respective computers which handshake each other
to transfer the data across...

Some? of these files are no doubt for the PAL version of the Atari
800/XLs,
is there an Xformer available as a PAL version?

I can receive attachment files OK, if you have the info, can you send it
to me, much appreciated.

The other option is to find someone who's already doing transfers from
5.25" disks to PC and wants access to a ton of new files?

I could post the floppies over to him/her for transfer.

I do have lots of varied stuff...
such as lots of graphics demos and picture files {drawn by myself and
other artists I have known, and still others by artists I do not know.}
These are in Technicolour Dream, Fun with Art, AtariArtist/MicroPainter
formats.

I do have some pretty amazing demos as well.

Plus the usual games stuff. Some games are not normally available too...

My email address is harvey.kong-tin@stonebow.otago.ac.nz
I can receive attachment files OK.

If anyone has a schamatic it would be good to get this info and
put it in the FAQ. My os board has 3 roms, A401, 402, & 403. There
must be 16k of ROM, otherwise you couldnt fill up C000-FFFF. I
know there is a way to disable the math pack, so possibly the 2k
rom is overlaid on the 16k space?

Steve

I think the RESET key on the 800xl is just tied to reset on the CPU. It
then checks for 3 'magic' values in memory when it jumps through the
start vector. If it fails, cold start, if it passes warm start.

Does the 130xe generate a 800 style interrupt only? I dont have one
here so im just guessing.

Steve

Yup, and nope.

There does exist a game. It's also on the 2600--an exact port, as far
as I can tell. It's nothing like the arcade game (which is NOT a vector
graphics game. SW and ESB were vector, RotJ was raster).

You've fly the falcon along the bottom 1/4 or so of the screen shooting
enemy ships whilst the new deathstar is being built up on the top portion.
